First off, it appears that you are in the California area (soma.net: San Francisco
or thereabouts). Here in California it is illegal to eavesdrop in on cellular calls. Will you soon be arrested -- probably not. You cannot be arrested over the phone as 'arrest' is defined as physical custody. This cannot be accomplished over the phone. Can he get your address? If he has your number and that number's phone bill goes to your address,

then yes he can obtain your information through telephone company records IF the telephone company wants to cooperate. Pacific Bell Security requires a case number be issued first before they release information. You may consider listening to other things in the spectrum

rather than phone calls and getting between two parties...

PCï¿½ 632.5. Intercepting or Receiving Cellular Radio Telephone Communication
(a) Every person who, maliciously and without the consent of all parties

to the communication, intercepts, receives, or assists in intercepting or receiving a communication transmitted between cellular radio telephones or between any cellular radio telephone and a landline telephone shall be punished by a fine not exceeding two thousand five hundred dollars ($2,500), by imprisonment in the county jail not exceeding one year or in the state prison, or by both that fine and imprisonment. If the person has been previously convicted of a violation

of this section or Section 631, 632, 632.6, 632.7, or 636, the person shall be punished by a fine not exceeding ten thousand dollars ($10,000), by imprisonment in the county jail not exceeding one year or in the state prison, or by both that fine and imprisonment.

We have done similar stunts from the Observation Deck at Sears Tower (STILL
the worlds tallest building in my book...) with HT's. Once we were able to
talk from the Tower to Highland Park on 1/10th of a watt (446.050 on an
Icom U-16 at the tower, and a Standard C528 in Highland Park) for a
distance of about 25 miles.

This was before the days of FRS radios, so maybe I will get a couple and
try it out...

"U> a) Use the existing scanner antenna with a splitter; I know this will make
"U> my 800MHz reception even worse, and I don't like the idea.
"U> b) Use my car radio antenna with a splitter; I can't imagine 400MHz will be
"U> any good that way, though.
"U> c) Get the Grove No-tenna, which apparently "turns your vehicle into a
"U> wide-band antenna." Sounds too good to be true.
"U> d) I could punch a hole in the hood or put a mag mount up there, but I
"U> don't like that idea too much.
"U>
"U> Anyone have any comments on a) through c) from their own experience?

Wel I would not even concider any of A thgrough C. And since you are
relectant to poke a hole somewhere I think you are out of options.
If it were me though I would get a 6 foot "Firestick" scanner antenna and HAM
type ball/spring
mount and find a place to put it on the side of the vehicle. I have
seen them both mounted on either side both up front or in back.

Requesting info on this scanner from users of the E version (European). I have had quite a few problems with mine in regards to battery power and intermod as well as selectivity. Some problems I have experienced on my unit (seriel # T000778):

1) Battery voltage is at 4.97 volts when it shuts off. This is from the included 4.8 volt ni-cad which will charge fully to about 5.48 volts. This also means scanner turns off rather quickly, much less time than my AOR 8000.

2) When using the included dry cell case with ni-cads that are fully charged yields a low battery warning within several minutes of use! This may be due to the dry cell case using a different tab on the radio and thus the radio is now based on 6 volts?? Since with alkalines @ 1.5 volts X 4.

3) When I programmed several frequencies in a bank (each which 39 channels) I have recieved the main freq (also the priority freq) which is in A0-00, on other channels in that bank within about 15 Mhz. Although this only happens for a few seconds and only when immediately changing from main freq. to another, I still find this strange. Example: I received the main freq of 484.0875 Mhz. on 470.8125!

4) The selectivity is quite bad as I am getting interference on UHF even with a hand held antenna and the squelch setting high as well as the attenuator on.

I am trying to determine whether this is a isolated case or if this is a common problem. Also I want to give my thanks to Rich Wells and his very informative web site where I first became aware of some of these problems.

Any help is appreciated.

Thank You,
Nikesh Kadakia KF6MKH

1621. NiMH Battery Question?

Newsgroup: rec.radio.scanner
Date: 1997-12-15 00:00:00 UTC
From: rljames <rljames@rpa.net>
Message-ID: <34955FA1.E48D137A@rpa.net>
Source record: 177362

Just picked up a Nokia handheld with spare NiMH battery and was wondering if I should include the spare in the charge/use/recharge rotation or save as new until first battery gives out?

I just have the phone for emergencies and am a very infrequent user, 2 calls a month would be about average. The rest of the time the phone either sits unattached or charging.

Needed this new phone because my NiCad driven Mitsubishi 3000 batteries all became useless because of memory affect and I'd like to avoid a repeat of that problem.

Thanx,
Bob
(BTW, does the Mitsubishi 3000 have any value?)

> >
> Again, from the Public Notice (Dated July 10, 1997)

You're still not citing the law, but rather, a press release attempting
to cite the law... which doesn't appear to correctly interpret the law.

I doubt that Radio Shack would allow their accountants to base all
of their procedures on IRS press releases instead of actually investigating
what the actual wording of the law is... so why is it that they open
their mouth with "answers" in what is suppose to be the forte of their
business without knowing what the actual law is?

> Use of scanners by individuals to intercept and divulge or use beneficially
> wireles telephone conversations (not just cellular conversations) without
> authorization is generally prohibited by Section 705(a) of the Act, 47
> U.S.C. SS 605(a).

Bla Bla Bla... That much we know... But:

> In addition,
> Section 705(e)(4) of the Communications Act prohibits the manufacture,
> assembly, modification, import, export, sale or distribution of any scanner
> that is intended for an activity prohibited by Section 705(a).
> Violations of this provision will also be referred to the Department of
> Justice for possible criminal prosecution.

First off, Section 705(e)(4) [47USC605(e)(4)] is the penalty section, not
the section making it legal or illegal. Cite the law which makes it
illegal for a scanner hobbyist to modify his or her own scanner to
receive cellular FREQUENCIES.

Secondly, unless the modification of a scanner to receive cellular calls
is done to render the primary use of the scanner (as a whole) that of
receiving cellular calls (as opposed to receiving cellular calls as a
subset of the full set of scanning activities that scanner is used for),
then 705(e)(4) does not, IMO, IANAL, pertain to such actions of modifying
a scanner to receive cellular calls.

NOTE! Previously I have asked you to show where it is illegal to
modify a scanner so it is capable of receiving cellular FREQUENCIES.
Please take care to note that there is a difference between cellular
FREQUENCIES and cellular CONVERSATIONS.

[as downloaded from law.house.gov earlier this morning]

47 USC Sec. 605 01/16/96
TITLE 47 - TELEGRAPHS, TELEPHONES, AND RADIOTELEGRAPHS
CHAPTER 5 - WIRE OR RADIO COMMUNICATION
SUBCHAPTER VI - MISCELLANEOUS PROVISIONS

Sec. 605. Unauthorized publication or use of communications
[...]
(e) Penalties; civil actions; remedies; attorney's fees and costs; computation of damages; regulation by State and local authorities
[...]
(4) Any person who manufactures, assembles, modifies, imports, exports, sells, or distributes any electronic, mechanical, or other device or equipment, knowing or having reason to know that the device or equipment is primarily of assistance in the unauthorized
^^^^^^^^^^^^^^^^^^^^^^^^^^
decryption of satellite cable programming, or is intended for any
^^^^^^^^^^^^
other activity prohibited by subsection (a) of this section, shall
^^^^^^^^^^^^^^^
be fined not more than $500,000 for each violation, or imprisoned for not more than 5 years for each violation, or both. For purposes of all penalties and remedies established for violations of this paragraph, the prohibited activity established herein as it applies to each such device shall be deemed a separate violation.
[...]

And what does subsection (a) prohibit?

(a) Practices prohibited

Except as authorized by chapter 119, title 18, no person receiving, assisting in receiving, transmitting, or assisting in transmitting, any interstate or foreign communication by wire or radio shall divulge or publish the existence, contents, substance, purport, effect, or meaning thereof, except through authorized channels of transmission or reception, (1) to any person other than the addressee, his agent, or attorney, (2) to a person employed or authorized to forward such communication to its destination, (3) to proper accounting or distributing officers of the various communicating centers over which the communication may be passed, (4) to the master of a ship under whom he is serving, (5) in response to a subpena issued by a court of competent jurisdiction, or (6) on demand of other lawful authority. No person not being authorized by the sender shall intercept any radio communication
^^
and divulge or publish the existence, contents, substance, purport,
^^^^^^^^^^^^

Ahhh, do you mean "intercept AND divulge"?

effect, or meaning of such intercepted communication to any person. No person not being entitled thereto shall receive or assist in receiving any interstate or foreign communication by radio and use such communication (or any information therein contained) for his own benefit or for the benefit of another not entitled thereto. No person having received any intercepted radio communication or having become acquainted with the contents, substance, purport, effect, or meaning of such communication (or any part thereof) knowing that such communication was intercepted, shall divulge or publish the existence, contents, substance, purport, effect, or meaning of such communication (or any part thereof) or use such communication (or any information therein contained) for his own benefit or for the benefit of another not entitled thereto. This section shall not apply to the receiving, divulging, publishing, or utilizing the contents of any radio communication which is transmitted by any station for the use of the general public, which relates to ships, aircraft, vehicles, or persons in distress, or which is transmitted by an amateur radio station operator or by a citizens band radio operator.

Sorry Paul, but I just don't see where an individual is prohibited from modifying his or her own scanner to receive cellular FREQUENCIES.

Maybe you'd better cite the law rather than press releases next time. I've learned that one thing full of more BS than the net, are press releases.

For some reason UPS can't get my order from Grove to Lima, OH in two days. The last three orders took three or four days. For some reason UPS gets it in Columbus OH and put it on a truck and takes it down the road about 10 miles and let it set all day and night before it goes on to Lima. I call UPS they said they would give Grove there shipping charge back. I didn't get mine back.. I found out from Grove that UPS just charges them the normal rate and trys to get it to you in two days.

A passive coupler, like the Stridsberg Engineering MC202 I
tested in Sept. 97 Monitoring Times, does have some loss.

However, you could use an active receiver multicoupler, i.e.,
one with just enough amplification to overcome any losses.
Stridsberg Engineering makes a few. I use their 4-port MCA204 to
split one antenna among 4 receivers at home. It requires
12VDC and furnished with a wall wart.

The 2-port active version is the MCA202 (50 MHz - 1 GHz)
and their advertisement shows a price of $135. I don't see
why it wouldn't work in a mobile unless you transmitted
with lots of power nearby.

BTW, Stridsberg Engineering, Inc. is located in Shreveport, LA
and their phone number is (318)861-0660.

>Anyone have any comments on a) through c) from their own experience?

A cheaper solution would be to use a magnetic mount 19" whip antenna
inside the back of your Jeep, dedicated to your BC100XLT. The soft
top won't interfere with reception, though the antenna won't be
mounted very high.

The current Jeeps are pretty plush. My 1974 CJ5 was all steel,
no padding, and I had magnetic things stuck everywhere :-)

I have used 19" mag mount whips under the fiberglass caps ("radome")
of Ford Broncos and F250s for years. Of course, they don't work
well on the 30 - 50 MHz VHF-low band.

Hi John and the group,

There are instructions for building an interface for the BC895 in the Radio Manager for Windows help file. There's no level conversion, just a straight through serial cable with a special connector on the 895 side.

Radio Manager is the first program to take advantage of the BC895's TrunkTracking mode. More details, please visit the Radio Manager for Windows Home page at

http://www.interplaza.com/bensware/rm.htm

Hi All,

My shareware program, Radio Manager for Windows, now supports the Uniden Bearcat BC895XLT including TrunkTracking (TM - Uniden) mode features and is available.

- Virtual BC895 Key Pad
- Hit List for quickly returning to an ID
- Lockout List for displaying all Locked Out IDs in a trunk bank.
- Channel Names in TrunkTracking Mode
- Upload TrunkTracking ScanLists
- Size Code Helper to help nail down Fleet Maps.
- Search Range - Automatically Skips over TrunkTracking IDs not within the range you define.
- Upload Channels(Including Trunk Programming Mode)
- Download Channels
- And almost all of the other existing Radio Manager for Windows features

Please visit my website to download. There are instuctions on building an inexpensive cable included in the help file.

>systems

>Are you 100% sure all US GSM carriers use 1900 MHz? I thought some used

1900MHz is the only GSM I've heard of domestically. If someone's come out with
GSM at 800MHz, it's a well-kept secret. 800MHz and 1900MHz are the only cellular
bands in the US.

>other bands? Also, on your previous point, I believe Ericsson is
>implementing a 1900 MHz GSM network in Stockholm, Sweden with Telia. This
>is to kill two birds in one stone: increased bandwidth for existing non-US
>GSM networks, and compatibility with US phones. It would allow US GSM users

I don't suppose this is impossible, since DCS-1800 and PCS-1900 bands do overlap,
so making a triple-BAND mobile isn't too far-fetched. I haven't heard about it,
so I'll have to inquire....

>>could do this, as they run at both 800MHZ and 1900MHz.

blade@cts.com (Robert) wrote:

Re: Smuggling and Law

> Come on Bill, you can't be serious, this is a joke right?

Sorry, pal. It's about as serious as a heart attack.

I'd place the chances of a Yupi confesser getting busted
as somewhat greater than a snowball's chance in hell. But
that's not so much the issue as is the carefree, lackadaisical
attitude that's being displayed.

You see.................

Nothing happens. Nothing at all happens, sometimes for years.
You get lulled into a false sense of security, like now, because
nothing happens. And when some asshole like me pipes in to advocate
a bit of caution, your pride is injured and so you run off at the
mouth all the more.....leading others into thinking it's okay.

And then one day some poor sap gets caught, and not only does
it rear into the public eye, but things go hawg wild when the idiot
snivels and whines that "Rich Wells" and "Robert Blake"
did it and said there was nothing wrong with it.

Well, Bubba, read my lips....the FCC has rules in their books that
can hold YOU accountable if you tell someone it's legal to do
something that isn't, or otherwise lead or guide or aid or abet
someone else in breaking their rules.

I'm pretty sure there are LAWS on the books to that effect, as well,
but I know for sure.....absolutely certain.....that the FCC has
such rules and actively enforces them.

The brass tacks of it all is that you're fostering. promoting, and
'fessing up to blatantly illegal acts, and you could well find yourself
in hot water for your very shaky, thinly veneered bravado.

You use criminal acts in your argument with me....which automatically
puts you on the losing side. It only goes downhill from there.

Don't believe me? Go ask a lawyer, pal. I *dare* you.

Rich Wells <wellsr@ibm.net> wrote:

>..... and I don't intend to start with Mr. Bill.

Cut the juvenile, petty bullshit, Wells. Cut it from
your end and you'll get none from me. But you DID open
fire, Wells....and when you do that, you don't get to
all the shots. Here, shitbird, let's take a closer look
at your opening fire:

RW> Must be nice to be such an angel and point the finger
RW> at everyone else...selective blindness to the law is
RW> great...especially when you can write books about it
RW> and newsletters to line your own pockets with money.

Pretty cheap shot for a mature, sophisticated "North Carolina
editor for The Scanner Club". Was THAT backstab called for?
I said some things about an inanimate object, the Yupiteru
radios. You fired at ME, Mister North Carolina editor for
The Scanner Club. You broke the rules. And there's more....

RW> Are these the insights gained from your excellent use of
RW> USENET bandwidth by arguing with Mackey and others?

I tried to tell you that I *don't* respond to Mackey.
So you pulled another cheap and untruthful shot. Nice
piece of work for a "North Carolina editor for The Scanner Club".

And here's another one, Wingnut:

RW> Saying quite a lot from someone who has probably never even
RW> used a Yupiteru. Or an AOR. Or an Alinco. Or a Standard.
RW> Perhaps if you had you'd realize just how ridiculous your
RW> statement above is.

You should be more careful, Mr. Wells, and remove your
head FIRST, before you break wind and blow your brains out.

RW> More blathering...

And you just don't know when to quit........

RW> Of course Bill knows that the ONLY reason people get these
RW> radios is to listen to cellular.

Geezus, Wells......you got down and personal in your
opening attack.....before I ever said Jack Shitt to you.
And then you talk in 3rd person to your goooooood buddy per:

RW> I refuse to take advantage of someone who is not
RW> intellectually capable of defending themselves.
RW> constantly trying to change the subject and using
RW> offensive language

And YOU weren't offensive? Geezus.....what church did you say you go to? Talk about changing the subject....geez, how's about YOU sticking to the subject, lugnut? And as for taking advantage.....you are cordially invited ... gawd, please do!!

But anyway, my points are simple:

1. You were offensive.
2. You were childish.
3. You were immature.
4. You changed the subject.
5. And then you displayed a gross lack of either essential savvy or candor....maybe both.

But then you are the North Carolina editor for The Scanner Club, so why don't you do Society a favor and come get me. Take me out, Mister Wells.

.....or......if you prefer, let's go back to talking about what makes the Yupiteru radio so great....beginning with the undeniable fact that it is illicit, contraband, and uncertified, and HAS TO BE SMUGGLED into this country.

Are you ready, Mister Wells? We can keep the topic just as straight as you wish. You don't cast any innuendo and I won't either. You don't fart and I won't. I'll play whatever game and on whatever level you wish.

My guess would be that the easiest way would be to run VirtualPC or SoftPC
and figure out the serial port pinouts. I haven't tried it, but it should
work.

Another would be to run a terminal program, but again you would have to
figure out the pinouts of the Mac serial port.

I have forsale two 800 scanners. One is a handheld and the other is a Base unit. I have the boxes for both. I am going to buy a new scanner and need to sell these. Make me a reasonable offer.

Pro 51 handheld 200 channels $130.00 obo
Pro 2036 base model 200 channels $110.00 obo

1654. Unofficial World's Record for Family Radio Service

Newsgroup: rec.radio.scanner
Date: 1997-12-15 00:00:00 UTC
From: dbaleria@aol.com
Message-ID: <19971215064001.BAA24804@ladder01.news.aol.com>
Source record: 177415

This may be of interest to scanner hobbists, as these babies are only advertised to get 1-2 miles range with their 0.5-watt 460 MHz band, fixed handheld antennas.

Unofficial World's Record for Family Radio Service!

On Dec. 14, 1997, my wife and I set out to test the upper range limits of our new unmodified Kenwood UBZ-LF14 FreeTalk Family Radio Service handhelds. We took two GPS units, road and topo maps, and two 50-watt commercial VHF FM units for initial and backup communications in the event we could not make contact with each other on the FRS units. We had completed a successful 2.5-mile test on flat, level, open rural land the night before. But this was to be more than 13 miles.

After that initial flatland test, I returned home and mapped out a possible long range line-of-sight trial area. There are two road-accessible hill/mountain peaks across our valley's floor, one at 3,840' elevation to the southwest (Woodrat Mtn.) and the other at 3,571' to the northeast (Roxy Ann), across a 1,700' valley floor and some lower intervening hills in front of the 3,840' peak. Using Street Atlas 5.0 map software, I got the longitude and latitude for each general location (wherever the cursor is, the longitude and latitude are shown in a window). Then using a spreadsheet application that calculates exact great circle distances between two locations from their longitudes and latitudes, I got 13.9 miles. That would clearly beat Mr. Kyle Smith's 11 miles he got from Mt. Hamilton and the S. San Jose valley floor with his Motorola TalkAbout Plus FRS handhelds.

My wife and I headed our separate directions in the afternoon. She could not get all the way up to her peak to the northeast due to a locked gate. So she chose the best position on the access road, at a GPS elevation of 2,669' on the west side, facing the peak I had driven to. I got to the top of mine, our hang gliding and paragliding launch area that has a sharp dropoff facing to the north and a timberless gap offering a clear shot angling off towards her peak. I would have been able to see her peak, except it was raining lightly and I was already up in cloudbase on this winter day. But we had solid communications on our 50-watt 151 MHz VHF FM mobiles, not surprisingly, as we have talked over 100 miles with them from two similar peaks.

But now came the real test. It was REALLY a long way when you hold one of these tiny little ½-watt, 6-ounce, 4" tall, 3 AA battery powered, $109 (mail order price) units in your palm and hope to have reliable communications that far. I had already been impressed with the 2.5 miles we had gotten the night before on the valley floor. But this was over 13 miles. I wasn't holding my breath.

We had the units on channel 8, CTCSS tone 19, and we had left the audio inversion scramble feature (unique to the Kenwoods) turned on. We were stunned. We had clear communications, a solid five by five with very little background noise, far better than at the 2.5-mile mark on the flats the night before! I mean solid and clear. Our initial transmissions were from a position standing on the ground, facing towards each other's approximate location, with the units held in our hands at mouth/speaker-mic height (no remote mics used), keeping thelittle factory antennas vertical. I'm 5'-11" tall and my wife stands only 5'-3" high. Later we just sat in our cars, with the driver's side windows open towards each other's general direction. They still worked just fine.

Wanting to break 14 miles, I asked my wife to then drive down from the peak and then on a road to the east up into the mountains that direction. She did, going another 3.5 road miles to the east, stopping because the road was going to go around an intervening hill. We still had solid two-way communications, with tone and scramble still on. I had her take a GPS reading at this new location. I could go no further away at mine, as I was on the ridge line already.

We returned home and I plugged the coordinates into the great circle calculation spreadsheet. Our first distance measured 13.4 miles, short of the 13.9 due to her not being able to drive all the way up to the summit of her peak. Our second distance was 15.5 statute miles!

I now think 20 miles from units in this new service is possible, but I will have to find a new set of peaks to prove it. This "world's record" could prove to be a fun challenge and thread here, to see who can get the best range with a pair of unmodified, commercial, out-of-the-box FRS radios (NO fair using illegal out-of-band ham units, illegal antenna mods, or illegal power boosts, etc.).

1655. Two Tone Decoders

Newsgroup: rec.radio.scanner
Date: 1997-12-15 00:00:00 UTC
From: NoSpam.n9jig@theramp.net
Message-ID: <NoSpam.n9jig-ya023080001512970050090001@news.theramp.net>
Source record: 177416

Some time ago I wrote asking about decoders for Two-Tone paging (1+1 or "Plectron" style tones). I was looking for a unit that would display the tones used, similar to the way various PL decoders display PL tones. Several suggested a unit by Genave, and I called them, E-Mailed them, and also wrote them asking for more info. I found a brief statement on thier web site, but the info was dated 1995.

I have yet to receive any response from them, so I will turn to you all for assistance. Is there anyone out there who has had experience with the Genave decoder? This unit apparently decodes audio off the air, and deciphers the tone freqs, and sends the data to a serial port on the computer for logging. It also will unmute the audio when a programmed tone is decoded, and allow for control of a tape recorder.

I need to know if anyone has one of these, how well it works, and if it would be worht my spending $500.00 for it. Any opinions would be welcomed.

Please do not misinterpret the above as a slam at Genave. I understand they are a small company that might not have fancy brochures and promotional materials. They have been very polite when I have spoken to them, but could not provide much more info than I have outlined above.

TIA!!

Can't you read? It need not be said that the store is
run by the manager. If the manager is supportive of sales,
then he is supportive of whatever can be done to make and
enhance future sales. Each store has some insight to the
scanning community. If the manager is a scannist, then
it will be more; if not, then less. Fact is....the store
will support the local community to some exent.

Yupiteru does not to any extent.

> Death? That's not smuggling...it's called espionage.

Sorry....SMUGGLING *can* be punishable by death. I
didn't stutter.......

> Please
> get your terms straight..."Man smuggles illegal radio into
> the country...sentenced to death...details at 11". You just
> love to change the topic to avoid the issue don't you?

Smuggling is a serious crime. And it's even more serious
when you coach and assist others in it.

> Well Mr. World Traveller,

Yes....I *am* a world traveler. Many times over....

> last time I checked, US Customs
> allows personal property to be brought back into the country.

Then you are an imbecile. You *cannot* legally bring into
this country any kind of *personal property* that is otherwise

illegal. Cuban cigars are one example. Uncertified receivers
are another.

> Like when I visit Japan, buy a radio so that it becomes my
> personal property and bring it home along with various other
> trinkets.

It better be legal, that is Type Accepted for transmitters, and
certified for receivers.

> US Customs has seen my "illegal" radios and let
> them through every time. So what law exactly is it that I'm
> breaking? Try "none".

The Telephone Dispute and Disclosure Resolution Act of 1994 for
one, and the FCC Rules and Regulations, as amended since 1994 for
two. Might even be more, if there are laws against stupidity.

> > Modifying things is a legitimate and
> > time-honored aspect of American life.

> Yes. I'm sure the FCC and the CTIA would see it that way

> them over immediately.

Who gives a shit? You can write books on explosives and
a hundred other illegal things. Freedoms of the Press and
Speech generally hold strong. And the CTIA has no bearing
in these matters at all.

> > There is a world of difference betwixt SMUGGLING and

No, Wells, I am not wrong. I dare you to call the FCC
or Customs or even a lawyer before you shoot off your
mouth again. You are just guessing....and you're headed
for the deep, dark shits if you don't develop some
essential savvy.

> Face it, you haven't even used a Yupiteru,

Used? Sure I have. And bench tested the hell out the
7100.

> or an AOR or an Alinco or a Standard and you

Oh yesssss I have.

> still stand on your pulpit

No. My test bench. But how's about I stick the pulpit
up your arse?

> and claim how they are so inferior.

What claims? Please quote them. Specifics, please.

> > So? So we hack and modify and make it so. Big deal.

> It is a big deal. Try and picture this...not everyone
> wants to hack around with a radio and make it do things

You're about the only one. And only because you CAN'T.
Most hobbyists are delighted to do a clip here and a
splice there. You are quite the exception to the rule insofar
as paranoia of popping the case on your superwhizbang scanner.

> if you can buy one that way out of the box. You get
> what you pay for. It is not our problem if some of us
> can afford the more expensive models and would rather

>freqs in the 800-900 range?

If you buy it stateside, no. I bought mine from Durham Radio in Canada, and my interface does not need to be unlocked at all. I paid more for it than I would have in the lower 48 (plus Durham will screw you royally on shipping) but I felt it was worth the added expense. Sometime down the road, when the software is no longer available to unlock Opto interfaces, it will be one less thing that I will have to deal with. That's the theory, anyway.

You could be in trouble, sort of. I think that you would probably be
fined. You
are MORE in trouble for BUTTING in where you should not be. This is why it
is
not legal to listen to personal cell phone calls, so that this type of
STUPID
behaviour will not happen. It is not moral for a man to have sex with
someone's
wife. It is also not a good thing to tell the husband and cause him more
grief.

YOU SOLVED NOTHING. now all of you are in trouble.

Emilio Goldtien <egoldstein@soma.net> wrote in article
<01bd0917$74bd4220$a2cfe1cf@uibel>...
I was listening to cell phone calls, and I overheard a police officer
having an affair. I called this womans husband, and he got real ticked, so
I hung up. I guess he had caller ID, and he called me back saying soon i
would be arrested. I thought I had blocked my number. He said that
listening to cell phone calls is not legal. Is this true? Please respond
fast as there needs to be some quick thinking on my part. Will I be
arrested over the phone, or can he find out my address?
I did not place the cell phone call, so I think I am immune.
Thanks

As long as you aren't close to an airport you can go up to 199 feet
with out lighting the tower. Over 200 feet you will have to paint and
light or strobe it. May even have to file an enviormental impact
statement. Also you get that big local zoning laws will come into
effect.

I just couldn't resist :-)

If you intend to connect to a computer wih software like 'Scancat',
you will need a level converter like the ct-17. Many options exist
instead of buying the ct-17.

In article <19971213061601.BAA26792@ladder02.news.aol.com>, ligosa@aol.com (LIGOSA) writes:

>Yes you may delete the input freq. You would only hear something if the
>units
where close to you. You will hear this anyway on the output freq as
>well

On many repeaters the repeater can be turned off on request. The mobile will no longer be heard, but the dispatcher still hears the mobile from the console. If the mobile is close to you try the input freq at that time.

1669. Re: **YUPI-9000 OPINIONS ???**

Wow! Never have I seen our more "professional" posters worked into such a frenzy over such trvialities! I don't own a 9000, but I do own a yupi 7100 and feel I must come to it's defense.

I bought mine in mint condition, used, with the box, manual, stock antenna and a custom made case. I bought it from an american previous owner, so that's one way one might purchase one stateside, semi-legally??? Yes, they are not FCC type approved, primarily because they cover the cellular band (869.010-894.000 and the associated system input freqs). But FCC type cert encompasses other things as well, such as a unit test and/or design analysis for the spurious emissions (throwing off stray RF). This does concern me, and I wish it had been type certified, but such is the state affairs we now must live with.

I recently dropped mine 4 feet onto hard tile (BANG!, Bounce...Catch!). Put a small crack in the bottom of the plastic case, but that was all. Hardly an endurance test, but I've had zero trouble with mine in 4 years of continuous use. Some users report they got theirs with poor sensitivity or seriously off-freq. Those are factory defects. Tell me a product that never had any production defects.

I've read all 3 of Bill Cheeks books, and he is THE MAN when it comes to modifying scanners. Bill doesn't like the yupis or any radio he cant get a service manual for, because it limits his ability to hack the radio, something he views as vitally important. It's a valid argument, but not something of importance to the vast unwashed masses of scanner users / operators. Most people do not purchase a scanner radio to tear it apart. Maybe they should, but the fact is, they don't. Bill is also a big fan of easy to use operating systems and good ergonomics, both important issues, especially for beginners. But with bearcat holding the patents (USA) to most common scanner features, other manufacturers have to resort to some pretty exotic command sets for their radios. Again, maybe not the way things should be in an ideal world, but we dont live in one.

Or maybe, today, Asian/Euro radio manufacturers have long stopped caring about dealing with things like FCC type certification and Bearcat patent infrigement civil suits. Their design efforts get to be concentrated on things like, you remember, performance and features and frequency coverage. That's kinda the way things were here before Bearcat established their monopoly and got to dictate what radios you could (physically) purchase in the U.S.? You remember, open markets, competition, supply and demand? Capitalism? Consumer choice? Is the U.S. economy something that needs our protection and support just to survive in a world market? Should what we've come to survive?

Radio monitoring in Europe and Canada and Asia (Japan) are booming hobbies, with a huge populace of consumers for Euro/Asian manufacturers to market to. Thanks to paid for politicians / special (industrial) interest lobbiests and

our 1950's import / export restrictions the amercian hobbiest has been left in the dirt when it comes to purchasing cutting edge technology radio receivers.Don't believe it? Go to the open air electronic markets in Tokyo and see what's for sale to the public.

It appears Bill also attaches a huge importance to being able to listen to cell phones. Almost a third of his first book covered this. I think when it was published / written it was still legal to tune in to. Bill really likes the the GRE and some GRE based uniden products because he knows those operating systems and can easily(?) hack them. I'm curious why he thinks the 64, which can't easily be modified, is a better radio than the yupi, which freely tunes through the 800 Mhz spectrum.

My 7100 is by far the best handheld I have ever owned, and I've owned quite a few. The VHF sensitivity still amazes me. Bill is talking through his hat when he says these radios don't perform well in high RF environments. I've seen my yupi blow away even Motorola Sabers in downtown Chicago. Does it ever get swamped? Yes. Does it out-perform all other handhelds in a high RF environment? Yes. Usually what happens is the s-meter starts climbing. But it still receives and gets little true intermod, until it's completely saturated. Then it just stops receiving. Other scanners are ringing with pager noise on ever channel long before this happens. If you can't monitor what you want I'd rather listen to silence than pager signals.

The 7100 operating system is truly odd. But guess what? I actually READ the operating manual and learned how to use it before I started bashing the radio on the internet.

The 7100 had revolutionary features when it was introduced. Others have followed in it's footsteps. What will I do when mine is in need of repair? If I cant fix it myself I guess I'm up the proverbial creek, unless I ship it back to the manufacturer in Japan. I really dont know if they currently will repair these radios or not. A sad state of affairs - but how did we get to this point in the U.S.??? (Actually, when it goes I'll be in the market for a mint, used yupi 9000!)

Is it illegal to ship these radios into the united states? I suppose it is. Should you break the law? No you should not. Death sentences? Hah! Whoever posted this is nuts. The unfortunate few who got caught importing non-fcc type approved radios got nothing more than a not very nasty letter from U.S. customs, telling them their order was confiscated. No one has even been charged with the violation. Another strictly enforced U.S. law.

Other posters in this thread have ranted about your money not getting re-circulated back into the United States. Who the heck cares? Ever heard of world markets? Do you only buy U.S. manfactured products from companies that don't use foriegn parts suppliers and are owned and operated by U.S. based firms? Your chevrolet has 60% foriegn made parts. The British own about 20% of U.S. businesses. This aint the 1950's! Wake up and smell the coffee. The pro-64 that Bill wants you to buy is filled with semi-conductors made in Malaysia. Like it or not, this planet (that's what we live on, not a flag in space) is quickly turning into ONE WORLD, thanks in large part to the internet, which is

what you guys are typing on. It WAS a product of the U.S. government. I suppose you guys have found some way of keeping your informative posts in newsgroups from leaving the country and not benefitting foriegn hobbiests / markets.

U.S. laws that needlessly inhibit free trade are the reason we are the laughing stock of the rest of the world (That and TV shows like Judge Judy!).

Can Bill tell me how I set a PRO-64 to tune in 50 hertz steps in the HF band? Where is the illuminated keypad switch on the PRO-64? How do I enter 350.350 Mhz, AM Mode on the PRO-64 to listen to the dogfights in the (Indiana) Hilltop MOA? Where is the USB / LSB switch on the PRO-64? How do I tune the PRO-64 to 6.25 Khz steps to check out the new narrow band stuff? How about 25 Khz or 50 Khz steps in AM mode? How about some FM broadcast music stations? Perhaps an AM broadcast station? Perhaps a shortwave broadcast station? No? How about an airport middle marker beacon? An NDB? Channel Two TV audio? A 72 Mhz voice pager or highway callbox? A 180 Mhz wireless mike? A narrowband 220 Mhz trunked system? A 220 band ham repeater? A milsat signal? A military rescue beacon on 243.0 Mhz? 868.9875 Mhz? Can I use Wideband FM to listen to the new fast food headsets on the 64? The PRO-64 audio still sounds crummy to me. My yupi has the best audio of any handheld scanner I've ever used. Jeez, classical music actually sounds like classical music!

I know you like lots of memories Bill, why does the 64 have only 400? The 7100 has 1000. The 7100 also has max 500 lockouts available from search. How many on the 64? (The catalog ad doesnt specify! - Yupi's Euro ad did!). The 64 appears in the new catalog right above the warning of what is illegal to monitor in these great United States that you're sooo concerned about saving. The yupi's euro ad featured it's near DC-to-Daylight freq coverage. My yupi came with a charger and yupi batteries (4 of 'em! - not 6!). I can turn off the beep on the 7100.

In the dark (all too often for me!) I can actually use the 7100's illuminated display as a (dim) flashlight for making notes! Try that with a 64!

Now on the other hand...

(Consider the 64 represents uniden's patents holding and technology that was a couple of years ahead of the yupi-7100)

PRO-64 features the 7100 doesn't have-

+Search and Store
+Preset search ranges (a full blown hardware reset on the 7100 installs some japanese band presets into the 7100 - I think the 9000 has a euro band service search feature)
+Computer Control (Not yet supported by tandy)
+Center-Tuning (Tries to stop on the exact freq while searching - the 7100 is bad with this, but remember the search lockout on the 7100 - easily remedied but a pain to do)
+Duplicate Entry alert (Personally I hate this feature)
+Reasonable bank size
+Easier lockout review
+Much easier to operate

+Available repair / extended warranty or service plan
+Bigger U.S. user base & after market support

For somebody who eventually desires to get into computer controlled scanning it's vital that your radio support, or be easily modifiable for, compter control! Both the 9000 and the 64 support it directly. In the U.S. manufacturers (software companies) have begun to support the 64's crude interface. I haven't checked the usual euro dealers' web sites to see if yupi is selling the software for the 9000 but I believe they at least do have software available, and a good user base of computer control hobbiests in Europe for the 9000 is starting to appear. The actual design of the 9000's interface is far more sophisticated than the 64's.

If bells, whistles, legality, ease of use and support are are important to you buy a radio shack or uniden product. If you want sensitivity and selectivity that will leave you in awe buy a yupi.

> Bill has rendered a short sighted, cynical opinion on the "Yupi". Yes
> it is not avalible in the U.S., but I think most people seek out
> these units because of their excellent qualities, not because they are
> "illicit"

>>No, sir, it is not a "short-sighted opinion". It *is* one facet of a very large picture, and that one facet is as valid as any other. A tree has "bark" but that does not make it a "dog". Nor is it shortsighted to discuss the bark of a tree. Nor that of a dog.

Gee bill, I thought you were REALLY were being cynical, or at least a little sarcastic. You actually think this? I'm surprised. (That stuff about folks wanting them because the radios are illegal to import)

>The fact remains....because the Yupi radios are illicit,
>there is little or no support for them in the USA. You
>can't even get a service manual for them, and woe be unto
>the poor sap who gets a Yupi that craps out. That's another
>facet.

Agreed, it's a shame.

>Ownership, possession, and whooping up the illicit Yupi
>radios only serves to irritate our Congress Critters and the
>Friendly Candy Company (FCC) .....who then add insult to
>injury by creating MORE....not less.....laws against our
>hobby. There's one more facet for you, pal.

So discourage people from looking for a superior product because our congressmen's votes were purchased? Keep a low profile at all costs - including reality? Bill, you always struck me as somebody with some gumption. I'm shocked.

>> Bill, can you direct all of us to a better handheld scanner than the
>> Yupi-7100 or the 9000 for 300 - 400 dollars blocked or not? If so I
>> would like to know about it.

>THAT, sir, quite depends on what it takes for you to call it
>"better". I cannot possibly read your mind. But I will
>venture to submit that the new PRO-64 can outperform the
>best of the best of the Yupi's in terms of basic receiver
>specifications: sensitivity, selectivity, resistance to
>intermod, spurious, images, desense, overload, RFI, EMI,
>phase noise, etc, etc, etc. The PRO-64 is on sale right now
>for $200.

Agreed, "Better" is a relative thing. The 64 doesn't out perform even old yupis (the 7100). The 9000 leaves it in the dust, both with regard to performance AND features. It doesn't appear that you give sufficient review to radios you will never make any money off of. And frankly, it really peves me off when you slam those same radios. In some cases it's warranted (the radio sucks), but you are way off base this time. The yupis rule.

>Another is the PRO-43, gone from the shelves now. Another
>may be the Uniden BC-3000....or the older BC-2500. Any of
>these will outdo the Yupi's in receiver characteristics.

>Do they have cellular? No. But then analog cellular is
>almost a thing of the past anyway.

I own a 43 and the 7100, again, leaves it in the dust. In every regard. I've used a 2500 and a 3000. The 2500 was rendered almost useless by cell images. The 3000 is a nice radio, but i'd put my 7100 up against it for intermod resistance and sensitivity any day of the week. Oh yeah, no s-meter on the bearcats. Is that a useful feature Bill? 80-85% of cellular systems in the U.S. Midwest are still carrying analog traffic. It'll be many years before the last analog cellular handheld is allowed to operate in the U.S. It's just my opinion, and clearly, we'll see, but I've heard that statement many times from a lot of folks, and I think it's absurd. Oh yeah, listening to cellular is illegal, too, Bill, don't you support that law along with import restrictions?

(There's a delicate, gray area, balance here. In the U.S. if you support cellular listening you do generally cause the hobby grief. Congress is really out to stop this, and support for it generally casts us in a poor light, and gives our enemies the ammo they need. But if you think there's a reasonable expection of privacy for cell phone users - you are nuts - it's a radio - get a clue. You are also nuts if you think the ECPA is a good law that we should all support. I don't advocate breaking the law, though getting arrested for breaking an un-constitutional law is nothing more than the first step in getting it struck down via court appeal. If nobody ever broke ill-conceived laws some folks would still be in the back of the bus and women wouldn't be able to vote)

> (Another passge from Bill's post...)
>But I don't know what you mean by "better". I do know that
in order to get a Yupiteru scanner into this country, it has
to be smuggled in. Smuggling is the world's second oldest
profession. And it is illegal. And it is destructive to
the larger picture. And you COULD get into some very serious
trouble for your efforts. Not only that, but you COULD be

directly responsible for someone else getting into serious trouble if they listen to you and act on your recommendation. Don't be a fool, fella.

If you are gratified by smuggling, then more power to you. I do not pretend to suggest what is right or wrong for YOU. But let's do be TRUTHFUL and tell it like it is. Buying Yupiteru radios is not good for the scanner community as a whole; nor for our country, even though it may be good for YOU.

It could land the next man in jail. Or even you for publicly 'fessing up that you're a smuggler. And then someone else will have to take care of your family.

I do not believe my prior post was shortsighted at all, Mister Blade. But I do believe yours was shorter than your whatchamacallit, if you catch my drift.

In final reply...

Yes, it's not strictly legal to attempt to import one though the mail into the U.S. It's even illegal to operate non-fcc type accepted equipment in the U.S. I don't believe in bending the truth in order to dscourage people from trying to do so. Who has done time for importing a scanner? Why aren't our efforts directed at changing or challenging out dated laws passed by corrupt politicians, instead of flaming each other? At what point did Bill Cheek become such a supporter of arcane U.S. import policies??? I find this depressing. Come on Bill, I know there's a little of the non-conformist still lurking in your tired spirit.

Yes, there are a great many bad things out there that COULD happen. If only folks were as worried about what HAS happened, what's happening now and how to change it.

Happy Scanning. - Ted

: appreciated.Maybe there are some websites you know that are selling it.Thanks

You might try the manufacturer-K&L Technology (214)414-7198
E-mail:KLTsupport@aol.com
The above data is old, but it is probably still valid.
Prehaps they will still sell you the package directly.

If not, there are other choices for POCSAG decoders-a search should bring
them up.
2 that come to mind are POC32 and PD204.

200-channel base w/ original box, owner's manual, antenna.

30 days left on 90-day warranty from Tandy Service Center.

Charles P. at Tandy "repaired PLL circuit(s), aligned unit to

maximum performance levels, tested all functions." All this,

and left the mod intact, for $74.98. Works perfect and

looks great. $175 shipped ground lower 48.

I have to run coax from my antenna to my radio, a distance of 33 feet. I want the least amount of signal loss. Questions:
1) Regardless of price, what would be the BEST cable to use?
2) What would be the BEST connectors to use?
3) If I had a budget limiting me to under $.50 per foot of cable (which I might), what would be the best for that rate?

Thanks.

1703. Can you detect a RS PRO-2042 in operation?

From: wesgregg@frognet.net
Message-ID: <3496040f.2235996@news.frognet.net>
Source record: 177222

Hello, a week ago last Tuesday my house was broken into and robbed.
Among things taken was our Radio Shack PRO-2042 base station scanner. I
really want to find it (and not to mention the people involved, right?) but
local police don't think it very likely unless they are actually caught
breaking into somebody else's place, so that leads to my question:

Is there any way to detect this scanner in operation without
multi-thousand dollar equipment? If I could afford that I'd just replace all
my stuff & purchase a better alarm than my new dog.

Thanks in advance,

Wes Gregg (wesgreggg@frognet.net)

> 1) Regardless of price, what would be the BEST cable to use?

A type of cable called heliax or hard line. And it comes in
many sizes and loss ratings (and prices), but the cheapest
starts at around $2/ft and goes skyhigh from there. Hard line
is not usually used in hobby installations, however.

Next best, and most practical in terms of the mechanics and cost
is Belden 9913 which ran around 60-70 cents a foot, last I knew.

> 2) What would be the BEST connectors to use?

Type N. Or BNC, if you can find it for that size of cable.

> 3) If I had a budget limiting me to under $.50 per foot of cable
> (which I might), what would be the best for that rate?

Radio Shack's RG-6 satellite cable is eminently suitable for scanner
situations, especially at 33-ft runs where even the worst cables
won't have a crippling loss factor, and where the most expensive
won't make a difference compared to the cheaper RG-6.

I have a Pro 43, nicads, extra battery pack, box & manual for $200.00, it has had surgery for the 800 illness, but has a sore throat (needs a new speaker). It works, but is distorted, sounds fine when you plug a speaker in the ear phone jack. My net searching for a replacement speaker have fallen on deaf ears, and I'm afraid if the "shack" fixes the speaker, they will also restore the 800 illness. I also have a lot of older Regency & Bearcat manuals, or copys of same for sale, as I need the space. Thanks for reading.

Source record: 177230

jtatz@chemistry.ohio-state.edu wrote:

> Does anyone know the FCC's regulation on height of scanner antennas?

The FCC doesn't regulate height of scanner antennas,
though the FAA might, depending on how close you are to
an airport. There is a 1 : 100 ratio for airport proximity.
The antenna can only be 1-ft high per 100-ft lineal distance
from the runway. So if you were 5000-ft from the runway,
then you'd be limited to a height of 50-ft. There is also a
200-ft limit, regardless, above which you have to get FAA
approval.... primarily so the tower can be put on the aviation
maps. Also your local zoning board may have some feeling about
antennas

> Also, I have read that it is good to mount any given antenna high, in
> order to clear obstructions, however is there a certain height in which
> most things are cleared by that height?

No. But the higher the antenna, the greater your range,
that's for sure.

There is a rule of thumb that signals closer to the ground
than 3 wavelengths will attenuate much more so with travel
than signals above 3 wavelengths above the ground. A wavelength
at 30 MHz is 10 meters. At 100 MHz, it's 3 meters. At 300 MHz,
it's 1 meter.

But don't be lulled. Thus rule of thumb is for the entire path
the wave has to travel. If anywhere along that path, it comes
closer to the earth (or other object) than 3 wavelengths, then
there is more of an influence than just the "spreading effect".

This means that an 800 MHz transmitter 5-mi from you might
actually be weak at your location unless your antenna is high
enough to clear most obstacles along the path.

In a word, no....there is no magic height. The higher the better.
The exception to this is when signals are strong enough to result
in full quieting (no background noise), then additional height
really won't benefit THAT signal. But the higher you go, the
farther over the original horizon you can see, therefore the
more signals you pick up and the more distant ones already in
line of sight get stronger and less noisy.

Anyone knows if the latest edition of ScanFan (not the 1996-97 edition) is available in Los Angeles or San Diego? Please advise if so...thanks

Robert--Las Vegas

While I have been on the roof of Sears (When I was a teenager, my father was the project manager for a microwave project there and brought me) the radio playing we do is from behind glass. I don't think the glass really affects the propogation, since it is not metalicized. It is fun though to talk through repeaters in Detroit on 4 watts, and Milwaukee on 1 watt, and simplex of flea power for 30 miles, especially in a state where the largest mountian is a slag pile in Toluca...

If the units have never been sold before and have just been
returned or "recalled" to the factory, then they can still
be sold as new. If they were returned by customers after
being sold then they can't be resold as new.

I don't see what all the fuss is about if RS is willing to
warrant them as new unless they have been repaired. In this
instance, apparently, all that was done is potting some of the
components on the board in epoxy which would not be a repair.

Radio Shack would have an obligation to disclose that any repaired
units were not new and to sell them as such would constitute a fraud.
If you have any doubt, ask the store manager if they are new or
refurbished and if you buy one, insist that the receipt indicate
that it is new.

1716. Re: laws on cordless phones?

Newsgroup: rec.radio.scanner
Date: 1997-12-16 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <674vur$f5u@HOPPER.ACM.ORG>
Source record: 177235

Dana Yeomans <dana@randomc.Com> asked:
> what are the laws on monitoring cordless phones?

The questions keep coming up, different laws are mentioned, and most replies are of the form "I'll do anything I bloody well please and no law can stop me". The following is a re-post of a short disertation on the various laws and their effect.

The laws of the United States, passed by Congress, are codified as the United States Code (USC). It is divided into titles covering various subjects. Title 18 includes the criminal laws and penalties; Title 47 covers telecommunications. A law can be refered to by its original name (i.e. "The Communication Act of 1934") or its entry in the USC. A specific section would be refered to by title/USC/part/section, i.e. 47 USC 605.
To carry out the law, the various government agencies create regulations, which are codified as the Code of Federal Regulations (CFR). It is likewise divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to which you are not a party (with certain legal exceptions), and sets the penalties. 47 USC 605 (the Communications Act of 1934) also bans the disclosure or use of third-party communications. With minor changes, this has been the law for 60 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the ECPA), which added definitions to the law that banned listening to cellular telephones. It also banned the monitoring of broadcast auxiliary, SCA and scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution Act (TDDRA), which instructed the FCC to ban the manufacture or import of scanners capable of receiving cellular. In accordance with this law, the FCC modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does not affect the sale of such scanners, so long as they were made or imported before the cutoff date. It also does not bar individuals from modifying their receivers.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the additional sections was a change to 18 USC 2510 & 2511 that added cordless phones to the original ECPA ban on receiving cellular.

In short:
It is illegal to manufacture or import cellular-capable scanners.
It is illegal to listen to cellular (and cordless) transmissions.
It is illegal to divulge any communication to which you are not a party.

Now, please - we all know the first two are: 1) stupid; 2) unenforceable; and 3) widely ignored. It is not really necessary to post the obvious to the whole world (unless you have an irresistable urge to demonstrate even less sense than the legislators who enacted them).

There were three different versions of the 2026. The early ones were
easily modded for cellular reception but the later ones can't be as
easily modified. They are *all* dual conversion design and as such
are capable of receiving the blocked portions of the 800 MHz band as
images. If you have one of the later ones, nothing short of changing
the CPU will restore the cellular and it's not worth the time or money
and most likely beyond your expertise. Do *not* let your friend
attempt to modify your scanner, he sounds dangerous.

Hi Everybody,

To shed some light on this.. we guarantee delivery to the US .. and our rate is 100% .. As said cannot really speak for the others .. but we are very confident about this and a little proud, too!

There are no exceptions.. if our customers don't receive their merchandise from us we'll return the money in full.. only "force majeure" (strike, war..) and acts of God go beyond.

Feel free to ask any further questions.

Best Regards,

Pete

No. The Opto boards are considered receivers which means they are
under the same restrictions as "normal" scanners and must make
cellular freqs unaccessible.

To do what you are asking, you'd need a '93/early '94 Opto board
and the 20-digit password which allowed them to receive in the
cellular band.

Hi Dave,
The 230 is a good radio and has been used by many hobbyists over
the years. It is a "revamped" BC220 with an extra ni-cad. It is
double-conversion which means that in some urban areas you might
have problems with interference.
For a little more money you can get a RELM HS200 which is
better for handling interference. You should check into its
features.
The BC235 has recently been "replaced" by the BC235XLT
TrunkTracker which you might want to look into as well. It is
more money but has MUCH better interference handling as well
as the ability to track communications on a Motorola analog
trunked 800MHz communication system.
Best of luck with your decision!

Hi Nikesh,
I have seen similar things with mine as well. I find this happens
time to time for some unknown reason. Perhaps related to other noise
generated by the battery saver feature. I find that if I turn the
radio off and then on(after receiving the low-battery alert after
only a few minutes use) everything is usually fine and I get the
normal run-life out of the ni-cad.

> 3) When I programmed several frequencies in a bank (each which 39

Definitely something wrong here. I think Alinco has been tweaking
the circuitry between introduction of the 10T model I have and the
10E model you have. They may have fixed some problems but introduced
other!

From my scanner book, there are a large number of frequencies listed:
118, 119, 119.5, 119.7, 119.9, 120.5, 121.0, 121.5, 123.7, 124,
134.4, 130.35, 130.175, 131.475, 131.775, 460.7, 464.1125,
131.2, 129.35, 122.95, 159.78, 131.55, 118.3, 120.2, 121.3,
121.5, 121.9, 122.6, 125.4, 460.2125, 401.8, 129, 129.7, 129.9,
130.8, 130.9, 170.49, 170.67, 464.525, 466.6375, 123, 162.27,
130.975, 131.925, 857.9625, 122.4, 122.5, 126.7, 126.9, 131.7,
332.6, 114.8, 335, 333.8, 122.85, 167.43, 109.5, 110.3, 109.9
75, 129.575, 129.8, 130.675, 166.59, 130.5, 131.95, 467.925, 129.4,
138,315, 129.775,, 1090, 1310, 1311, 1335, 1336, 460.3375, 118, 119,
119.5, 119.7, 119.9, 120.2, 120.5, 121, 122.4, 122.5, 125.4, 126.7,
126.9, 131.7, 134.4, 859.3875, 130.4750, 129.7750, 129.0750, 460.5125,
115.5

Now there are some dupes in there and it lists even the glidepath freqs
etc, so not all are useful ...

If you're really interested, there is a good scanner book available in
the city. The best one I've seen is from Larry, NC Consulting and it's
called the "Manitoba Scanner Directory". Mine is the 96/97 edition.

Dan.

If you compare the nicad pack and the battery case, you'll find they use
different contacts in order to transfer power to the radio. This is
probably to allow the radio to trickle-charge the nicad pack and to
prevent it from doing so to the battery case. I wonder if the incoming
voltage takes a different path as well; so that it will "use" a lower
voltage from the nicad pack without complaining.

This chain letter has been going around, in virtually same form, for over 40 years (to my own knowledge) but has been more plentiful in the past 15 yrs, as the "dumbing down of America" progresses. My postmaster, and the PM Gen say it is a Ponzi scheme and strictly illegal under POD rules. Yet, beginning entrepeneurs and dreamers continue to promote it with hardly anyone but the PO making any money (selling stamps!). I was told last year that the Inspection department was entering chain letter people's names into a computer and if the same names cropped up repeated, they (the PI dept) was making cases. But I have never heard of anyone getting more than a form letter from the PO Dept.

Other than the PO, the mailing list peddlers are making a killing selling the same old names to everyone. I have received just over 300 of these letters this year, all using the same mailing label.

My advise to anyone getting one of these letters is to file it in the garbage. Don't bother putting the names on your prospect list if you are selling something. They don't buy. They just dream.

Hardline is an excellent choice, but, Bill is right. Most hobby installations do not use it. I think that is primarily due to cost and difficulty of installation. However, here in the Phoenix area, many hams scarf up every piece of used 75 ohm hardline they can get their hands on. The prices vary from free (haul it away) to around $.50/foot. The connectoring can still be a problem though. If you can't manage the hardline, the recommendation for RG-6 cable from Bill is your best bet.

I read some years ago about 14 mile DX with wireless intercomes operating somewhere around 200 kc. The users disconnected the RF output from the power line and coupled it to long-wire antennas. I think I read about this in a newletter put out by the LOWFERS, a low-band enthusiasts group that operates stations below the BC band.

If you are serious about this thing from the beginning post, keep in mind that although you blocked your ID when you made your phone call, the called party CAN ring you back with *69 or whatever it is. If you dont tell them who you are they won't know.

But I wouldnt worry about it. Nobody's gonna do anything to you. The more one stirs crap, the more it stinks. I think it is probably stinking all they want at that guy's house and he wants to forget about it. Just be careful in the future. Use a pay phone far from your house and keep in mind that now, at least in my area, the ID of calling cel phones is transmitted (but can be blocked) so you must be careful when using one of those, too.

Can we use it air-to-air? :-)

Those of you who wish to try this, check out seashore to seashore
environments. I know one guy who talked to a ham on the Island of
Malta from the beach near Tel-Aviv --an 900 km path with all of 300
mW. A couple of Italian hams managed a 10 GHz link with all of 30 mW
over a 1100 km path. Of course, their antennas had a bit more gain,
but the principle is the same.

Look for over-water ducts if you're serious about this.

Actually, if you use the URL that Andre posted, you get the lovely web site of Ramsey Winches. If I understand correctly, Ramsey Electronics is the site we seem to be searching for. The correct URL is www.ramseyelectronics.com. Ramsey has done a good job with this site and I have purchased several kits over the years, although not directly from the site.

One comment: Please check your URL's before you post them....

Cheers

That is the way it works for us when prosecuting cases relating to using a phone in a crime. I give Pac Bell Security a case number. They set up a trap and trace. Security later gives us the logs and origin. I've done this countless times. I'm not aware of this 'other' service.

Jim;

FCC regulations have rules concerning the height of transmitting antennas, but I don't know about receiving antennas. I think that the FAA would come into play.

The basic rules are:

Around airports, anything that sticks up into an imaginary cone (slope 1 foot up for every 100 feet out till you reach 20,000 feet). Different slopes and distances for Heliports.

If not within 20,000 feet of an airport, anything over 200 feet.

If your antenna structure falls within these parameters you must file with the FAA. The FAA will then determine your structure and you must paint and light the structure.

When you are around a major airport look for things that are painted orange and white and you will see what I mean.

Regards

Ed

> lawyer* has broken the law.

Maybe ....maybe not. But a legal opinion carries with it
some measure and path of redress if it's wrong. You get a
bad legal opinion, and that's called MALPRACTICE or worse.

> All the rest of Cheek's ominous rumblings are
> the stuff to scare children with. Scary, scary Bill, who once or twice
> got into trouble and now can only hope the long arm of the law touches
> somebody else. Or hope to scare some gullible folks here.

Geezus H. Kriste, cut the petty bullshit, will ya? I *know*
what I'm talking about; else I wouldn't have said it...or stuck
to it after the fact. You can argue it all you want, but
your personal innuendo only invites me to wonder about your
gene pool and what branch of the salamander family you sprang from.

Comprende?

If I hoped the long arm of the law would touch someone
else, I'd keep my mouth shut and forward copies of people's
confessions here in the newsgroup *to* the authorities.

The screaming shits is that SOMEONE ELSE....some goody-two-shoe
is probably doing just that.....and not saying squat about it.
There most assuredly is a potential for grave liability for
confessing, admitting, whooping up, touting, and promoting the
use of illegal/contraband equipment *and* to performing illegal
acts.

The really FUNNY thing about all this (and your prepubescent
insinutations) is that it is soooooooo easy to find out that
what I'm saying is true. Take our illustrious Mister Wells, the
notorious "North Carolina editor for The Scanner Club", ferinstance;
he's probably already done found out that I told it like it is
and that he could be sucking rocks for telling people it's legal
to bring Yupiteru radios into this country. That lad is/was
plumb dumb and wrong on top of dumb.

I'd bet he's had a minor flood of *informed opinion* whupped
on his head and shoulders by now and is thinking things over.

<shrug>

I'm not going to sit here and pull your leg, fella. Argue all
you want, but cut the petty bullshit, will ya?

> > radios. You fired at ME, Mister North Carolina editor for
> > The Scanner Club. You broke the rules. And there's more....
>
> What did Wells say that wasn't true?

Well, if I said you were a maggot, what about that wouldn't
be true? But anyway, Wells said ....that it's legal to bring Yupiteru
radios into this country. That and of course, lots of personal
innuendo. Like you're conjuring up.....

> Isn't your reputation for "cellular mods"?

Huh? No. As far as I know, I "invented" only one cell mod.
And even then, dozens of others probably discovered it
simultaneously. Cellular mods are a matter of logic; not of
discovery and "reputation".

The thing is.....people are primarily interested in cellular
mods; and less so or not at all in S-Meters, AutoTaggers,
Data/Tone Squelches; Memory Mods; computer interfaces, and
many more that REALLY are the basis of my "reputation".

You're way off base.

> What rules did Wells break?

Social rules. Basic rules.

> The rule that you may not contradict Cheek without
> vicious retribution?

Contradiction is one thing. It can be done without
getting personal. Wells got personal. Wells wanted
something more than he felt he had and he felt that

I had it. So he thought he'd help himself, being a
"North Carolina editor for The Scanner Club" and all.

> > I tried to tell you that I *don't* respond to Mackey.

> Since the last 1 or 2 weeks, perhaps? Does that erase several months,
> if not years, back?

1 or 2 weeks, my ass. See if you can FIND my last post to him.
And when you do..... it has to count for something, right?
If not, then I may as well go have me some more fun with him.
What the hell, fella? When you stop doing something, you stop.
If I stopped, then it is a matter of record. If I didn't, then
that is a matter of record. One way counts just as the other.

> Bill, the veins in your forehead are really standing out now, and you
> need to wipe the spittle from your lower lip.

Ha ha ha ha.....what if I mentioned WHAT needs to be
wiped off *both* your lips and WHAT's running down your
chin?

Eh?

No matter, I can see you're not desirous of being
constructive, so you're destined to wind up in the
same List where I keep Mackey and his goooood buddies.

But if you change your mind and want to be constructive,
let me know real quick. My Shit List works very good,
and it works for e-mail and newsgroups. It's merciless.
But you know how computers are, right?

1747. Re: NiMH Battery Question?

Newsgroup: rec.radio.scanner
Date: 1997-12-16 00:00:00 UTC
From: n2ywd@aol.com
Message-ID: <19971216174601.MAA13011@ladder02.news.aol.com>
Source record: 177266

rljames <rljames@rpa.net> writes:

" Just picked up a Nokia handheld with spare NiMH battery and was
wondering if I should include the spare in the charge/use/recharge
rotation or save as new until first battery gives out? "

You will not need to "rotate" the batteries. Just use the one battery and keep the other in the box until the first dies. Even though the NiMH batteries do not suffer from the "memory" effect, you should still do a full charge and discharge, as you get better time(s).

"I just have the phone for emergencies and am a very infrequent user, 2
calls a month would be about average. The rest of the time the phone
either sits unattached or charging."

You may want to occasionally run the battery down, and do a full recharge. Like I said before. This will enable you to get the maximum duty cycle(s)

" my NiCad driven Mitsubishi 3000 batteries
all became useless because of memory affect and I'd like to avoid a
repeat of that problem."

That's the glory of the NiMH cells, you won't have to worry anymore. (Just be sure you aren't frying your cordless home telephone by leaving that on the charger when you aren't using it....no NiMH batteries for home phones yet !)

"BTW, does the Mitsubishi 3000 have any value?"

Well, if you can get it to work (with cigarette lighter adapter perhaps), it can be a nice backup phone. The FCC requires that cell carriers provide "911" service to anyone who needs it, regardless if they are a subscriber. You would be able to call for help with it, but if you tried to make regular calls, BIG COST, about $2.00 / minute.

>hesitant?

It's simple. He's hesitant because he can't find ANY posts relevant to the challenge. He'll keep spewing nonsense trying to get out of it. He'll keep making up stuff about the challenge being different than it is. He'll keep taking text out of context and rewording it to fit his needs.

If he truly can prove he has posted anything relevant during that 2 month period, why not just do it to shut me up? Because he can't - that's why. If I'm wrong, I can take it. I'm a man, unlike the mental patient macaroon.

Besides, it doesn't matter anymore. He has already proven that he can't do it and the challenge is over. He's admitted defeat in his own, retarded, way.

Just look back on the last couple of weeks. Yet again he posts absolutely nothing of value. He won't change. He is only here to troll. He does THAT well.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the

transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation.

This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages

long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call Plus is

basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good

book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret

Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio

room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are

mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the

instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities

to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a

flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the

microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd

electrolytic capacitor in series between the external
speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder
connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier
activated relay inside the BC890XLT wore out. Andy found
the identical relay sold at Radio Shack (part #275-232) and
says the BC9000XLT uses the same relay, too. |

Replacement Bulbs for BC760XLT |

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are |
illuminated by "grain of wheat" type incandescent bulbs. |
Gary Saffer reports that the bulbs and buttons are located |
on a small printed circuit board which sits behind the |
radio's face plate. Gary unsoldered the burned out bulbs |
in his radio and replaced them with 12 volt Radio Shack |
bulbs (#272-1092c). They should last a long time when |
powered by the 8 VDC supplied by the BC760XLT.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and

feature priority scan and a separate trimmer capacitor for
each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC985XLT Trunktracker

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700

Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band.

Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good

internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on

vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for

each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion,

254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at www.grove.net for a review which includes quantitative test results.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered

different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate.

Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound

Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort

memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in

early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge both Radio Shack's optional, monolithic NiCd pack, and AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned

out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner

crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

http://patent.womplex.ibm.com

Local manager sez these will all need to be sold with a
"double warranty" This I guess, is what RS does to get
out of price discounting when they sell a demo or a customer
return. I guess it also gives them a legal loophole for refurbs.
The model I looked at had a '95 date code, (7A5) so I know
its not new. They are probably considered "remanufactured"
now since they come with a little extra epoxy to "stiffen" up
the board. BTW, has anyone had a late model from Grove's
that they opened up to see if it had been epoxied????

I don't know about the UK version, but it's probably the same
as the USA version, details of which are shown below. You will
be interested in the baseband audio pin.

CKT RF-in SCAN AUDIO
SCANNER NFM CHIP TYPE SYMBOL Pin Pin BASEBAND
=============== =============== ======= ===== ===== =========
PRO-44 MC-3361N IC-201 16 13 9

HOOKUP PROCEDURE
================

If you need the raw Discriminator baseband audio signal for
external purposes, the best way to access it is via a jack
installed in a convenient, unobtrusive location on the scanner.

1. Install an RCA or other jack in a desired place on the
scanner's external case, typically the rear panel.

2. Connect the shell or outer frame part of the jack to scanner
chassis ground.

3. Connect the (+) leg of a 2.2-uF tantalum capacitor to the
Discriminator output Pin. (Capacitor should be tantalum,
but can vary in value from 1.0-uF to 10-uF at a voltage
rating of 25-50vdc.)

4. Connect the center conductor of a shielded coax (RG-174, etc)
or shielded mic cable to the (-) leg of the capacitor.

5. Connect the shield of the cable at this end to a nearby PCB
ground trace or spot.

6. Connect the center conductor of the other end of this cable
to the center or hot lug of the jack.

7. Connect the shield of the cable at that end to the ground lug
of the jack.

8. Fabricate or buy a shielded patch cable with one end to mate
with the new jack on the rear of the scanner at that end....and
the other end to mate with whatever jack is on the tape recorder,
processor, decoder, or whatever device is to be connected at the
other end.

These frequencies are called "inter-city" they are used as back-up and
"hot-line" channels between communications centers.

Try 155.37 -- the most popular nationwide
39.46 -- usually used in rural areas where 39 mhz mobiles are still used

155.475-- is also widely used across the country in mobiles for
interdepartmental coordination

Just to let you know, Pete at Bandercom has told me that regardless of the disposition of your radio by Customs, returned or confiscated, they'll ship another. And it doesn't matter how you ordered it, email, phone, fax, whatever.

Does anyone really buy things from this guy? Maybe if
they are impressed with his crudity, and arrogance.

I checked into his BBS a long time ago, and had to enter
all kinds of personal information just to get information
sheets on a product he made for the Radio Shack scanner.

When I emailed him that I thought it was unreasonable
to request my age, sex, and other information just to
get the privilege to buy something from him, he sent a
very nasty note back to me, not quite as crude as the
stuff I see here, but I'll never forget his response.

I can see that he has not changed. He has to bait people
with XLT895 mods to get "action"

Bill, you have a problem, and I cannot believe you
are actually earning a living, it is really amazing.
You should be on TV or a believe it or not program.

Go ahead and flame away, apparently it makes you feel
better about yourself to belittle and insult others.

The rest of you out there should just ignore this guy,
and refuse to buy his products, and enter his game.

Greg

1780. G/Wiz and PRO-2042 and PRO-43

Newsgroup: rec.radio.scanner
Date: 1997-12-17 00:00:00 UTC
From: Michael Moore <m.moore@utoronto.ca>
Message-ID: <34989E0F.C2C3A6C7@utoronto.ca>
Source record: 177038

I've read Bob Parnass' article on the G/Wiz board and it sounds promising. He installed it in a PRO-2006, which scans at a rate of 25 channels per second. However, I've been told that the G/Wiz board doesn't perform well in Radio Shack scanners, because these scanners "scan too fast." Presumably this individual is talking about the newer scanners with super fast scan rates. I believe the PRO-43 scans at the same rate as the PRO-2006, so I don't think this should be a problem. But the PRO-2042 scans at 50 channels per second and even faster with the OS535 in control. Can anyone confirm that the G/Wiz board will work well in the PRO-2042 (with or without the OS535)?

No you cannot because the cellular frequencies are blocked out of the
OS535's micro, but for what the OptoScan turns that
plain old Radio Shack Scanner into, who needs cellular anyway. The FCC said
you cannot have software unlock the cellular
bands of the radio, so Opto had no choice but to block these bands without
allowing any unlock codes for the cellular frequencies.

Would like to know if anyone has any information about the wireless phones that nearly all the employee's carry around at Lowe's Home Improvment Centers. They have no antennas, they barely work past the parking lot (spoke to an employee once about the range).The employee's are constantly using them. Talking to other personell or to customers. I have searched from the cordless phone bands 43-47 mhz, 902 thru 928 mhz band then all the way up to 2gigahertz with no results.

For those of you don't know what Lowe's is, it is a large home improvment store similiar to "The Home Depot".

I kinda believe they might spread sectrum but don't know.
Thanks!

> Tinkerman

Your reciever's channel bandwidth may not be wide enough for a high speed data channel. Try installing a wider IF filter. This is easier at the 455 KHz IF rather than the 10.7 MHz IF. The NFM mode on a scanner usually uses a filter about 5 KHz wide. Try one about 15-20 KHz wide. Murata and Kyocera mahe them. Some types come in a variety of widths. Find out what filter is used in your scanner, look it up in a catalog or on the manufacturer's WEB site, order a similar, but wider unit and install it. Note: now your radio's NFM mode will cover 3 or 4 5KHz wide voice channels, so you might notice adjacent-channel interference on crowded bands. for more theory on digital radio, read the publications of the Amateur Radio Relay League. Hams do a lot of digital stuff these days.

Good Signals!

OK, Toilet Boy, you've made two claims to fame. First, you claim to have a Masters Degree in Communication Technology, and second, you claim to have written for the ARRL and other professional publications.

I say you're a LIAR on both counts. If you're not, post the name of the school and the year your degree was awarded, and post a list of each article you've written that has actually been published. State the name of the magazine, title of article, and date of publication. If the information can be verified, I will post a public apology. If not, you leave.

Post the proof of your claims by December 31, 1997, or be branded as the liar and fraud that we all know you are. No evading the issue by saying you don't have to prove a thing. You've put yourself on a public pedestal as some kind of electronic guru. I say you're bogus and can't stand up to the public scrutiny. I say not only is the emperor wearing no clothes, but he is wearing last years fashions!

All right Toilet Boy, put up or shut up.

So, by way of your reasoning - if you post a lame ass note about
someone, and he doesn't (sink to your level) and reply to your stupid
inane drivel -- that's an admission of guilt on his part????

Your logic and reasoning powers are apparently on the same sub-basement
level as your grammar skills...

I'm bored right now, or I wouldn't waste time on you either...

I have an AR8000, unblocked, with OptoLynx interface and Opto Scout 40.
All are in like new condition, with manuals, boxes, software, cables,
etc.

Want to trade for a Newton MP2100 with software, cables, etc. WIll
consider a MP2000 with accessories and/or cash to upgrade to MP2100.

Why would I check out this page when I can go straight to the legitimate source of the info and get the lastest myself?

Your trunking listings are either taken from Ron Katz's page (who took them from the Bearcat site) or they're taken from the Bearcat site directly. I made some mistakes when I first submitted info to the Bearcat site and these errors have crept into your page as well as Ron Katz's.

Your gif maps look very similar to the ones found on Dave Stark's homepage. Hmmm, I wonder, could they be the same.

Steve

ps if you and Ron want the latest Peel listings then check out the Bearcat site. I sent an update in yesterday.

Yes, but.... What is "secure" today - won't be tomorrow. If they can ENCODE something - it can also be DECODED. it's a fact of life...it just takes time to develop the technology sometimes.

"They" claimed that trunk systems would be the end for scanner enthusiasts, that we would no longer be able to coherently monitor the police. For awhile, they were right - it took a few years - but we now easily track the trunk systems...

"They've" given up on trying to stay one step ahead of us scanner nuts with technology, and have settled on controlling us via making our activities illegal. Note cellular and cordless phone laws - with more restrictions being introduced at an alarming rate.

Big Brother sees scanners as a threat.

Watch your ass, boys and girls.

Yes, my Uniden 9100 D.S.S. phone is secure also. I hold my Opto scout frequency counter as close as I want to it, and I get random readings. Scanning the frequencies only reveals digital noise, and presumably each frequency in the channel only carries part of the conversation, so it would take some fairly fancy equipment to eavesdrop on me over the airwaves.

The best way to use a freq counter is with an antenna that is sensitive to the frequency you are trying to count and relatively dead to other frequencies. This will lower the RF floor to levels only in your area of interest.

>Hey y'all! Does anyone have any experience with frequency counters??

Hi Everybody,

Although, we have made a general rule to ourselves and a concession to the net using scanning community not to post to newsgroups to advertise (unlike some other outlets) we thought this would be the best way to thank all people and reach all of you for Seasonï¿½s Greetings. This year was the first for Bandercom in the net and has most certainly proven where the Internet is taking us now and in the future.

The year has been good for us. We have shipped scanning equipment to 12 countries in all continents.. Competition was good too, and as we got to buy bigger quantities we were able to cut off some for our customers. For example; When we started, the price for the MVT-7100 was $459 and we ended up with $299.. thereï¿½s a change!

We were recognized widely becouse of our - somehow - "agressive" policy on our sales and pricing. Weï¿½re contacted by the BIGGEST manufacturers and their "sole distribution" agents of some countries as weï¿½re stepping on their toes. We even received a letter from a Legal Dept. of one of these Big Guys theyï¿½re very "worried" and complaining about "the way that we are encouraging" importation of Wide Coverage scanners to the US. The fact is that we never encouraged anyone.

In this business you get to talk to people a lotï¿½ Even though we are so much apart geographically I can feel the same sprit among scanning enthusiasts here and there. Itï¿½s very easy for me to agree with you on things like how the scanner laws should be and peopleï¿½s right to tune-in on action and so on.

I have read many articles here and have had many conversations with people and I am beginning to see the point, really! It is not so much about the cellular block that is it.. NO. Itï¿½s really that once some legislators see that it is possible to restrict peopleï¿½s lives, they will go on for even more severe violations of personal freedomï¿½ Recent plans to ban almost all scanner sales in the United States is that.

Whew! The purpose of this writing was not to be cynical like above - quite the contrary, I really hope that the season will bring joy to all of us and something to think about - something about our valuesï¿½ Itï¿½s also a time to be with the ones that we love and I hope thereï¿½s someone for everybody so that you can turn off the radio for a little whileï¿½ and hey! Be on watch for Santa, he may bring you a new one. (Did you know that Santa lives in Finland, thatï¿½s where we are!)

We wish all of you a Joyful, Merry Christmas and Happy New Year,

God Bless,

Bandercom Staff
Pete, Mike, Make, Jaska & Ollie

That's not entirly accurate. Back in the "good old days" this allocation
was the CB Class A band; not to be confused with the present CB Band
around 27 MHz. The allocation you refer to is now called the General
Mobile Radio Service (GMRS). By the way, the Family Radio Service (FRS)
has been nestled on splinter channels amongst the GMRS allocation; even
using some of the existing GMRS channels, I believe.

1826. Re: freq needed: dfw "inner city"

Newsgroup: rec.radio.scanner
Date: 1997-12-17 00:00:00 UTC
From: kqualls@metronet.com
Message-ID: <349809e6.7208698@news.unt.edu>
Source record: 177096

In Texas, the two inter-city frequencies are:
154.950
155.370
One is used by base stations as their transmit frequency, the other used by mobile stations as their transmit frequency. I forget which frequency is assigned to which.

155.475 is allocated as a national intersystem coordination frequency, but I've never heard anything on it here in the DFW area.

I'm not aware of any intersystem frequencies in the 453/458 or 460/465 MHz ranges. I don't monitor public serivice much any more, so things may have changed since I was active in monitoring.

There are five intersystem coordination frequencies (or frequency pairs, I forget which) up in the 800 MHz range, but I off the top of my head, I don't know what they are.

Hope this helps.

Hello,

I am looking for very inexpenxive desktop scanners for monitoring of
one frequency only. I will take all those old 16ch desktop units off
your hands. They must still look presentable and function properly
and be capable of receiving 450mhz (dont neet the 800mhz)

If you have any item fitting this bill send me a email message with
the model number and your bottom price.

73....

I have a netset pro 44 radio scanner, and I would like to connct up
the discriminator to my soundcard. My problem is that I don't know
what the discriminator looks like, where I find it, and how I then
connect it up to another wire.
All help greatly appreciated, thanks

>>tandkmoran@aol.com (TandKMoran) wrote:

>> Yes, they are not FCCtype approved, (Yupiteru 7100)
>Type Acceptance is for transmitters; certifications are for receivers and other electronic apparatus.

-Quite correct, I was very wrong. Yupis aren't FCC certified. But I think it's still at least technically illegal to operate non-cert receivers. And for good reason, spurious emisions = interference.

>> I've read all 3 of Bill Cheeks books, and he is THE MAN when it comes to modifying scanners.
>THAT isn't true

-Certainly many pretenders to the throne out there, and many other very technically qualified folks. Especially these days with all these programmers unleashed on the world. I did my first major mod from your first book. You had the first real computer interface. I drool over your articles in MT. Good crumudgeons (Sp?) are hard to find these days. I have a lot of respect for the way you have run your business. I've learned more about electronics and the radios I own from reading your works than from anywhere else. Indeed, too bad "mods" have come to mean cellular coverage.

>> Most people do not purchase a scanner radio to tear it apart. Maybe they should, but the fact is, they don't.
>I don't have any hangups there. Scanners ARE meant to be used for something other than paper weights, I believe.

-Agreed. And I tear mine apart on a regular basis. My point is that availabilty of service manuals and modifiability are not concerns that the vast majority of scanner purchasers have. As a result, the manufacturers really dont care. And if you can purchase a radio that has all the features you want in the first place, you don't need to mod it. Personally, I haven't found that radio yet...

> But the perspective IS that when people ask "for some mods", they're really wanting cellular. I don't care about it other than the coverage itself.

-Me Too! Again, how sad they have come to mean the same.

>there are no "GRE based uniden products", whatever that means.

-I'm not so sure that GRE didn't have a hand / chip in some recent uniden models, but I'll step down.

>> I'm curious why he thinks the 64, which can't easily be modified,
>But it CAN be!!!

-Indeed, but not for full 800 coverage, I fell into the trap myself. (Shame!).

>"Coverage" is not the predominant criterion of what makes a receiver "good" or "better". It is only one aspect. The sum and total of other criteria push the Yupi over to the side a little. Cellular is its chief claim to fame.

-Strongly disagree with you here, but again, personal tastes play a role. Here in Chicago intermod reject is absolutely vital. Frequency coverage is, for me, a huge factor. Cell coverage was not as big an issue as today when the 7100 was introduced. It's "chief claim to fame" at that time was it's outstanding sensitivity, performance, features and it's freq coverage. You may be right today, maybe that's why people want them today, just so they can listen to cells. It's not why I bought mine. These radios kick butt.

>> My 7100 is by far the best handheld I have ever owned, and I've owned quite a few. The VHF sensitivity still amazes me. Bill is talking through his hat when he says these radios don't perform well in high RF environments.
>When did I say that?

-Sorry but I deleted the previous posts in this thread or I'd quote the paragraph. Go back to your original posts.

>But......what you do hear in congested environments is not necessarily *really* on that particular frequency to which you are tuned. I ran a Yupi 7100 through some serious bench tests and found that it heard more than what was really there. <shrug> I know....some people call that a feature or a benefit. I don't.

-My bench is Michigan Avenue and North Avenue beach. My yupi 7100 works great downtown. You could be right with imaging, I don't have this problem myself. I know what freq the 1st and 18th CPD districts are on.

>It is illegal. Contraband. You cannot promote it; foster interest in it; offer it for sale; without risking civil or criminal liability. On that basis alone, "bashing" as you put it is justifiable.

-No it's not contraband. It's not illegal to simply own. It's probably illegal to turn it on. It's illegal to try to ship one into the country. I don't know if it's illegal to buy one used, but it's probably illegal to sell one used. Today, thanks to lawyers, you are probably civilly liable for picking your own nose in the bathroom. Again, don't break the law. "civil or criminal liability" does not justify the mis-statement of facts. I can't foster interest in it? This line of thought, that we should limit our expression because of fear of prosecution, that we need to be against anything the government doesn't approve of, leads to the real "tyranny and oppression".

>Regardless of any disagreement, it *is* illegal, and therefore cannot contribute to the USA scanner hobby. It *can* detract from it in many different ways. The Yupi has absolutely nothing to offer.....other than just ONE thing.....features to the guy who buys it.

-Yes, features and performance, the purchase of a well engineered product. Happily our rantings are read worldwide.

>If you like and cherish yours, more power to you. But most people who hear you and your expertise cannot profit or benefit...nor even relate. You are using a radio not available to the crowd. And if the crowd were to take an interest and start importing them en masse, there would be a plethora of Pandora's Boxes all opened at one.

-Yup, I like mine fine. The USA crowd. Yes. What a sorry state of affairs we've come to. You can't buy simple consumer electronics from overseas. I don't advocate breaking the law, but there's quite a few being imported as I type, I'm certain. If that were to really catch on, well, there'd be a lot more confiscations and maybe some fines. Eventually the State Dept would lean on foriegn nations to get their retailers to stop shipping them. Those nations would resent us a little bit more. And the CTIA would get some more free time on the evening news. Or, maybe somebody would get criminally charged, and then we'd get a court test of the "reasonableness" of the fcc certification criteria and the associated import restriction. A little stink can be a good thing every now and then.

>The Yupi cannot possibly gain market prominence and stature. If it did, it would be self-defeating. It is illegal, plain and >simple. You can't pooh-pooh that away.

-No, I sure can't. It's pretty scary. I don't get the first point at all, but OK.

>>Death sentences? Hah! Whoever posted this is nuts.

>I did. Am I nuts? Smuggling is a capital offense under certain circumstances. Not here. Not now. But.... it *is* a serious crime if and when the law decides to prosecute. In a time of war or martial law, I daresay....a Yupi-possessor certainly COULD be summarily executed. Many of us are into radio as a hedge against tyranny and oppression. Getting caught in a crime under such circumstances CAN be a death sentence. Can it happen? I don't know. But simple logic says to be caught with a PRO-43 is one thing; with a Yupi is quite different.

-Sorry. I really didn't realize that you were the party suggesting you'd be executed for ordering one. No, you are not nuts, but you might be on your way with what follows here. Under the circumstances you are describing I don't think it's going to be a real big issue that you have non-cert radio, they are going to shoot you anyway. And it probably won't be because you own a radio. If you envision this sort of situation as something that's likely to ever happen here I'm amazed that you are such a big fan of the USA. Again, I'm getting weary of folks worried about the things that could have happened, or almost happened, or might happen. What's really happening? What's likely to happen?

> But first of all, confiscation alone, amounts to a serious sanction, wouldn't you say?
>Secondly, are you familiar with the Freeband CB Radio scene where non-type >accepted radios are grounds for $20,000 fines? Check it out.

Yes indeed. "Confiscations" of all types by any authority concern me greatly, for any reason. Funds which can be proven to be the direct profits of criminal activity I maybe can see, but beyond that it all strikes me as denial of due process, and more importantly, reflects an odd way of thinking. Individuals should be held accountable, not objects. Yes, those "freeband" CB's that can TRANSMIT out of band and cause INTERFERENCE to services allocated to those frequencies. I see a huge difference between the "wrongness" of marketing illegal transmitters to unlicensed hobbiests versus somebody trying to purchase a non-cert receiver. One is politically incorrect, the other is likely to cause harm. I wish they would up the fines for out of banders. Ever seen a frequency allocation chart? What's on either side of the CB band?

>> Other posters in this thread have ranted about your money not getting re-circulated back into the United States. Who the heck cares?
>I gather you don't. That's your prerogative to not care. But it is a little unpatriotic.....

-The idea that the US economy can't stand on it's own in a world market is what's un-patriotic. What's un-patriotic is when industrial trade organizations use their influence to get federal agencies to selectively enforce the law. I'm a conservative free market capitalist at heart. I used to be a real "patriot". I have a lot of problems with our current state of affairs here in these great United States. Things are changing, too, the world gets smaller every day. There are bigger fish to fry than waving the flag. There are very few consumer entertainment items you can buy that are truly made in the USA.

> Like it or not, this planet (that's what we live on, not a flag in space) is
> quickly turning into ONE WORLD, thanks in large part to the internet,

>Ahhhhhhhhhhh, yesssssssssss! The New World Order.....where at long last, after centuries....the Iluminati are on the verge of getting it all.

-There's always hope. How can I help.

> But you can set WiNRADiO to 50 Hz steps in the HF band.

-Yeah, seriously, the winradio is cool. But my 7100 is more sensitive and has better selectivity.

>And it is illegal. Why doesn't Yupiteru Co. get the thing certified and market the hell out of it here in the US?

-Because they make enough money on it in the asian / canada / europe markets. And because dealing with the US lawyers and the trade restrictions and the re-design for the fcc cert sucks. And becuse we haven't started a letter writing campaign to Yupiteru.

>I don't know, but I can easily stick 6400 channels in the PRO-64 and load 'em up with a computer.

-Your "easily" is a whole lot more "easily" than most folks "easily". I've looked inside that puppy, pretty small. The Yupi 9000's interface supports a whole lot more than just loading memories.

>> Now on the other hand... (Consider the 64 represents uniden's patents holding and technology that was a couple of
>years ahead of the yupi-7100)
>GRE. Not Uniden.

-quite right - my error.

>> PRO-64 features the 7100 doesn't have-
>> +Computer Control (Not yet supported by tandy)

>Oh yes it is supported, but it dosn't need to be anymore. We've got it figured out. Tandy can go whistle.....

-Cool, but this interface sucks. The Yupi 9000's is cool.

>And.....break the law. Send your money where it supports the Europies and the exotic Orient.

-Don't break the law, change it. There are Europeans and Asians reading this. In fact, they had some really cool radios to sell you, but they decided we were ugly americans and changed their minds.

>Ownership, possession, and whooping up the illicit Yupi radios only serves to irritate our Congress Critters and the Friendly Candy Company (FCC) .....who then add insult to injury by creating MORE....not less.....laws against our hobby. There's one more facet for you, pal.

-Yeah, I'm kinda in this same frame of mind right now (still), too. I guess we free americans do need to keep a low profile. But I draw the line at casting a radio in poor light - performance wise - when really it rules. They are great radios - don't buy one.

>It's not buying votes that keeps Yupiteru from submitting their wares for certification. It's Yupi's decision. The law does not discriminate. Icom has to certify their radios same as GRE, Uniden, and Relm. Yupi chooses not.......

-Yes, and good for them (Yupi). Icom, GRE and Uniden choose which radios to certify for US sale. Icom especially has many other products and product lines you can buy in Japan, but not here.

> You see, that which you perceive as a lack of gumption is only my inability to afford $20,000 multiples of fines and JAIL time. I am absolutely certain that if I get slapped with a hairy assed fine, I'll be very much alone in my dealing with it.

-Yeah, really. If I had about a million to blow on civil rights attorneys I'd have been arrested for cellular monitoring a long time ago, and after my appeal none of this would be an issue. I don't have a million, but I talk to reporters whenever I can...

>> It doesn't appear that you give sufficient review to radios you will never make any money off of.
>Ohhhhh gawd.....here we goooooooo..... Same old ____; same old story; same old slam. That ____ gets mighty old and helps dispel any empathy that might ever arise in me...

-Hey nothing wrong with making money off of radios, tried to do so myself once. I always wonder how many parents of 12 year radio hobbiests make them stop reading this newsgroup when they see all the obscenties. Wake up and smell the coffee - when the profit motive enters the picture you can expect people to question your motives. Keep your empathy - who made you the great unquestionable ethical one? But really my basic premise is wrong - you could be designing software for the yupi 9000 if you so desired.

>Yupi will *NEVER* rule - take that to the bank! Not until the company certifies their radios and sets up a marketing and support office here in the USA. Yupi may rule in Afghanistan or Timbuktu. Not here.

-Performance wise - they blow away anything legally available stateside right now.

>This ____ is getting awful old, pal. Before you insinuate that spew again, how's about checking the copyright dates in ALL the materials to which you refer....and infer..... In truth, sum, and substance, I do *NOT* advocate anything about cellular. Get your ducks lined up before spewing any more of that ____, okay?

-Really. Don't break the law. But come on - lighten up - you wrote nothing in volume one designed to assist someone with listening to cellular? Sure it was legal then. And just like me, now you don't do it. Great. I wasn't insinuating anything. You sound like a guilty man accused.

>The ECPA is over 13 years old now. Intact. Unchallenged.

-Because the agency charged with it's enforcement pronounced it un-enforceable the evening it was passed. They won't prosecute under it because it's a bad, un-reasonable and probably un-constitutional law. It's special interest legislation in it's worst form. Even the folks who bugged Newt didn't get charged with it.

> We're not going to win this one by flaunting the law..... we already are the gross minority.

-True, you don't get laws changed by flaunting them.
Step 1 - you get arrested
Step 2 - you hire a big time lawyer
Step 3 - you convicted
Step 4 - you win in an appeal to a higher federal court.

or, probably cheaper, you buy a house committee and get them to pass legislation nullifying the previous law, le'ts pass the hat...

or, even cheaper, petition yupiteru to get FCC certified.

>> Who has done time for importing a scanner?
>Time? Or paid hefty fines? Check with ACE Communications in Indianapolis. Check with EEB and Grove for what the threats alone are like.

-Oh yes, I know the G leaned on distributors. And it's pretty bad when you are out a pocketful full of cash because customs confiscated your order. So don't order one, either. But you've missed my point entirely - the Yupi perorms in

amazing fashion. And it's just plain wrong to go around telling people the PRO-43 or the PRO-64 offers better technical performance just because you are scared of the government. You told the original poster he stood chance of going to jail - how much chance? Again I ask - who went to jail?

>> Why aren't our efforts directed at changing or challenging out dated laws passed by corrupt
>> politicians, instead of flaming each other?
>You tell me. At least speak for yourself and tell me.

-Because radio monitoring attracts a lot of passive, border-line sedintary (Sp?) personalities, who don't tend to get motivated and organize and use the media to our advantage. Compare us to the (talking) amateur radio community and the way they have organized to fight legislation that negatively impacted their hobby. It's shameful. But even today a few loud voices can have a big impact. I haven't lost all hope.

> Furthermore....Yupiteru *could* join the US market if it wanted to.
Obviously, it doesn't want to. Since it doesn't want to and since it is illegal to bring their wares into this country, it is a totally moot matter to factor their radios into the scope of what we're all about.

-Do me a favor and don't tell me what I, or anyone else, is "all about". Or what I should or shouldn't discuss. Talk about tyranny and oppression. I don't see why discussion of technologies unavailable in the US should be outside the scope of this (worldwide) newsgroup, nor even a newsgroup dedicated to just the US. It just might help raise the awareness of US hobbiests.

>They're illegal and cannot possibly be a market player in this country except to and among a cultist elite....a tiny, insignificant group that carries no weight in the greater scheme of things. This group advocates illegal acts and only heightens the resolve of the Congress Critters to deprive us of what hobby we have left.

-I'm not advocating illegal acts. I'm advocating the truth. Cultist Elite huh? Gee, I kinda like that - can I use it?

>Far better we support the companies who do invest in this country and in the hobby community. In any event, it serves no useful purpose to support Yupiteru and to blow smoke up their _____. They've got nothing to give us but they are there to take our money. Give yours to them, if you want. I guess a prosthetic in any form costs money.

-It serves the purpose of spreading knowledge. I buy japanese electronics from american outlets all the time. What does that serve? It makes this a smaller world - that's what it serves. Who owns Tandy? Who owns Uniden? Who owns the factories where all the parts inside their products come from? I buy from Grove whenever I can because they really do support the hobby. I guess you mean a Yupi is just a status symbol - sure is - ya know why? Because it's a great radio.

> I remain a staunch supporter of individual choice.

-Just so long as you're not civilly or criminally liable for exercising it.

>The fact still remains.... In the big picture, Yupiteru is a loser. Else it would be here. Simple.

-So what you really mean - if it's not sold in the U.S.ofA, it's no good.

-Oh yeah, and to answer the original posters question - The Yupiteru 9000 is a great radio,
but illegal to order one from inside the US.

I have a few PRO-2005s and haven't found them to perform
differently from the PRO-2006 except for scan and search speeds.
They are both excellent models and almost identical.

To which I say:

What kind of nonsense is that? I make a request of you, but you refuse to answer because *others* haven't answered your requests? Frankly, I could care less about 3mta3, but I am curious about your bibliography. Why won't you answer *me*? You have never made any requests of me, therefore I have never refused you any answers. But, whatever. My curiousity is waning, and I no longer find your Mackey-ness amusing. You need to come up with some new material. I guess I need to find another NG where the BS is at least original instead of the SOS on a daily basis.

Source record: 177116

I have repaired a bunch of UNIDEN BC-560XLTs. These scanners are used in Sheriff Patrol cars in my area. I used to have to replace 1 open front-end switch diode and 1 varactor diode on the RF board.

The problem was due to the scanner receive antenna and its proximity to the 100+ watt 37MHz transceiver in the car....

Now, since the Sheriff operations have moved its operations to VHF high band at 160 MHz, I will get in a occasional BC-560XLT with the VHF-Hi sensitivity almost gone......

Sensitivity on the bands not transmitted on in the very near field is usually impaired, but not too noticeable.

My point is that your MR-8100 may have been removed from service where it was used near a high power VHF-hi transmitter, possibly with a defect in the transmitter or antenna.

Sounds like your MR-8100 needs a trip to Uniden..... The diodes (or maybe even a transistor) shouldn't cost you more than a couple of bucks over and above the minimum service charge. The problem could even be a loose connection on your RF circuit board.
Last time I checked, Uniden still had stock of service manuals and components for the MR-8100.

Be persistent with the automated Uniden phone system - It can (is) be a pain....

You can't "lock-out" the VHF performance by programming.

The display illumination are all LED's - only a LCD is used for the main large Alpha-numeric display.

In most cases you do not need an antenna at all at the track. Suggest
you first try without and only use the stubby if unable to pick up the
action. Check out the rental trailers, you'll see that most do not use
an antenna on their rentals.

>Audio mod is where they increase headphone jack output.I don't know how to do

On most of your new radios audio modification is not necessary if you
have a decent set of headphones. Try and buy them at the track and
expect to pay over $50. Demand at least 22 DB of noise reduction.

Scott, If you are planning to use this descrambler for illegal practices such as listening to scrambled phone conversations, NO ! It is illegal. Now, however, If you want to scramble and descramble YOUR OWN phone, that is OK. Ramsey had a KIT that you could build that would scramble and descramble audio inversion, but it has been a long time since I have read one of there catalogs. How knows, It might work on a scanner, but I wouldn`t advise it. Good luck,
Charlie

>your Money and Takes your Chances.

"Contraband?" I thought the use of that term was reserved for smuggled goods like dope. I never thought I'd live to see the day when using your ears would violate the law.
Regarding the sales of import scanners: Bandercom and Atlantic Ham Radio both have ads in the Dec. 1997 issue of Monitoring Times with a disclaimer which states that Bandercom/Atlantic Ham Radio will give a full refund and hold customers harmless from shipping expenses if a purchased unit is returned to the vendor by US Customs. I can't say for sure if this policy applies to online orders as well (maybe it does--Bandercom and Atlantic Ham Radio both give the address to their Web sites in the ads in Monitoring Times), but apparently the full refund policy is in effect for orders placed via mail or telephone.

1862. ## O.K., I give up trying to acheive a high speed data receiver by adding a discriminator tap!

Newsgroup: rec.radio.scanner
Date: 1997-12-17 00:00:00 UTC

Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner,rec.radio.amateur.equipment

Hello Dudes,

The heading says it all: after tapping my scanner's discriminator output and still not acheiving a sufficiently fast data receiver (above 8K baud, not just pocasg...), I'm looking for a reasonably priced receiver with a built in data port (i.e. data slicer, outputting the high speed bits modulated on the signal such as MDT, POCSAG, EDACS, etc. for external decoding). Ideas, anyone?
Just in case, if someone HAS managed to acheive high speed data reception with a standard scanner plus discriminator tap and possibly improved (compared to mine) data slicer, I would sure like to hear about it...;-)

cheers,
Tinkerman

Note: when Replying, please email me directly in addition to posting here, so no responses are missed. Don't forget to remove the "97" from my email address inserted as an anti-spam counter measure...:-)

Hi there...

I am looking to trade some or all of the following radios for a 2 Meter/440 Dual Bander with wide-band recieve (including aircraft and 800 MHz).

*Bearcat 200XLT Portbale Scanner - Great portable scanner, covers 29-54, 118-174, 406-512, and GAPLESS 806-956 MHz (yes, including both the mobile and base cellular phone frequencies). Digital PLL tuning, LCD Display, Backlight, and all the other good features you would expect to find in a excellent scanner. Have two batteries, charger, "rubber duck" antenna and manual. One sratch on the back of the unit, but otherwise very much in good condition.

*Realistic HTX-202 2 meter HT - This portable HT covers the 2 meter Ham Radio band, has 5 watts output, DTMF, PL Encode AND DECODE!! Memory channels, backlight, etc. Have all original boxes and manuals, "rubber duck" antenna, two battery packs, one "dry AA" type, and one NiCAD type, charger, PLUS external Speaker/Mic unit. Very good condition.

*Motorola DPC-550 Cellular Flip Phone - No, this is not an ordinary "Cell Phone". This is much more than that. By using a simple jumper (already installed) you can use this unit as a "Cellular Band Monitor", a mobile "Beacon", a wireless link, a "Room Monitor", a pager, and many, many other practical applications, the possibilities are endless. All documentation for these procedures is included. Phone is in EXCELENT condition, barely used at all, comes with Dual Overnight Charger, three batteries, one Car DC Cord, and all ESN/MSN info.

I am looking to trade ALL of the above units for a good, solid, dual band (2 meter/440) HT which has wide band recieve, (800 MHz included) and has at least 4 watts output power. May also trade for another decent item, just email me and we'll see what we can do. BTW, I also have a Realistic HTX-100 10 meter rig with a HF preamp, the radio tunes 26-30 MHz, will only trade for something good. I am located near Philadelphia, PA (South East PA) Thanks.

> feel I must come to it's defense.

Defending an inanimate object? That's part of the problem.
Defend people, perhaps, but inanimate objects? Guess I don't
understand that one too well.

> I bought mine in mint condition, used, with the box, manual, stock antenna and
> a custom made case. I bought it from an american previous owner, so that's one
> way one might purchase one stateside, semi-legally???

Semi-legal until some unforseen issue arises. Then illegal.
I know....chances of the unforseen are 1:100,000 or so. But
what you don't understand is that those odds could reverse
almost overnight.

> Yes, they are not FCCtype approved,

Type Acceptance is for transmitters; certifications are for receivers
and other electronic apparatus.

> Tell me a product that never had any production defects.

Not on this planet, that's for sure.

> I've read all 3 of Bill Cheeks books, and he is THE MAN when it comes to
> modifying scanners. Bill doesn't like the yupis

THAT isn't true exactly......

> or any radio he cant get a service manual for, because it limits his
> ability to hack the radio, something he views as vitally important.

Not just me. Also the countless others who are "looking for a few
mods". It takes that service manual to initiate the more serious
processes of supporting a scanner, technologically speaking.

> It's a valid argument, but not something of
> importance to the vast unwashed masses of scanner users / operators.

It is important, spoken or not, when they "want a few mods".
Or, later, want to know how to fix it when the thing craps

out. Or want someone else to fix it......

> Most people do not purchase a scanner radio to tear it apart. Maybe they
> should, but the fact is, they don't.

I don't have any hangups there. Scanners ARE meant to be used
for something other than paper weights, I believe.

> Bill is also a big fan of easy to use operating
> systems and good ergonomics, both important issues, especially for beginners.

We could get down and dissect that, but it's pretty good as it stand.

> But with bearcat holding the patents (USA) to most common scanner features,
> other manufacturers have to resort to some pretty exotic command sets for their
> radios. Again, maybe not the way things should be in an ideal world, but we
> dont live in one.

That is an interesting perspective. But I'm not sure the User
Interfaces are all that proprietary. Courts have ruled that
"look and feel" cannot be patented or copyrighted. I/O and
displays are not proprietary, either.

> It appears Bill also attaches a huge importance to being able to listen to cell
> phones. Almost a third of his first book covered this. I think when it was
> published / written it was still legal to tune in to.

I wish that were not the perspective. But the perspective IS that
when people ask "for some mods", they're really wanting cellular.
I don't care about it other than the coverage itself. A few years
ago, the Cellular bands were UHF-TV ch 70-83. They may be assigned
to something else in the years to come. It would be nice if any radio
could cover it all.

> Bill really likes the the
> GRE and some GRE based uniden products because he knows those operating systems
> and can easily(?) hack them.

I know the Uniden systems even better than GRE. And there are
no "GRE based uniden products", whatever that means.

> I'm curious why he thinks the 64, which can't easily be modified,

But it CAN be!!! Just not for cellular. Memory and a host
of other stuff, yes!

> is a better radio than the yupi, which freely tunes through
> the 800 Mhz spectrum.

"Coverage" is not the predominant criterion of what makes a
receiver "good" or "better". It is only one aspect. The sum
and total of other criteria push the Yupi over to the side a
little. Cellular is its chief claim to fame.

> My 7100 is by far the best handheld I have ever owned, and I've owned quite a
> few. The VHF sensitivity still amazes me. Bill is talking through his hat when

> stops receiving. Other scanners are ringing with pager noise on ever channel
> long before this happens. If you can't monitor what you want I'd rather listen
> to silence than pager signals.

But......what you do hear in congested environments is not necessarily
really on that particular frequency to which you are tuned. I ran
a Yupi 7100 through some serious bench tests and found that it heard
more than what was really there.

<shrug>

I know....some people call that a feature or a benefit. I don't.

> The 7100 operating system is truly odd. But guess what? I actually READ the
> operating manual and learned how to use it before I started bashing the radio
> on the internet.

It is illegal. Contraband. You cannot promote it; foster interest
in it; offer it for sale; without risking civil or criminal liability.
On that basis alone, "bashing" as you put it is justifiable.

Regardless of any disagreement, it *is* illegal, and therefore cannot
contribute to the USA scanner hobby. It *can* detract from it in many
different ways. The Yupi has absolutely nothing to offer.....other
than just ONE thing.....features to the guy who buys it.

If you like and cherish yours, more power to you. But most people
who hear you and your expertise cannot profit or benefit...nor even
relate. You are using a radio not available to the crowd. And if the
crowd were to take an interest and start importing them en masse, there
would be a plethora of Pandora's Boxes all opened at one.

The Yupi cannot possibly gain market prominence and stature. If it
did, it would be self-defeating. It is illegal, plain and simple.
You can't pooh-pooh that away.

> Is it illegal to ship these radios into the united states? I suppose it is.
> Should you break the law? No you should not. Death sentences? Hah! Whoever
> posted this is nuts.

I did. Am I nuts? Smuggling is a capital offense under certain
circumstances. Not here. Not now. But.... it *is* a serious
crime if and when the law decides to prosecute. In a time of war
or martial law, I daresay....a Yupi-possessor certainly COULD be

summarily executed.

Many of us are into radio as a hedge against tyranny and oppression.
Getting caught in a crime under such circumstances CAN be a death
sentence. Can it happen? I don't know. But simple logic says to be
caught with a PRO-43 is one thing; with a Yupi is quite different.

> The unfortunate few who got caught importing non-fcc type
> approved radios got nothing more than a not very nasty letter from U.S.
> customs, telling them their order was confiscated. No one has even been charged
> with the violation. Another strictly enforced U.S. law.

Beg to differ. But first of all, confiscation alone, amounts to a
serious sanction, wouldn't you say? Secondly, are you familiar
with the Freeband CB Radio scene where non-type accepted radios
are grounds for $20,000 fines? Check it out.

> Other posters in this thread have ranted about your money not getting
> re-circulated back into the United States. Who the heck cares?

I gather you don't. That's your prerogative to not care.
But it is a little unpatriotic........

> Ever heard of
> world markets? Do you only buy U.S. manfactured products from companies that
> don't use foriegn parts suppliers and are owned and operated by U.S. based
> firms? Your chevrolet has 60% foriegn made parts.

And Toyotas are made here in the USA. This is a complicated issue
best reserved for another forum. There are many tradeoffs associated
with foreign trade and balances of payments. But the Yupiteru is
illegal and offers nothing to the country, community, or hobby; just
to the individual.....

> The British own about 20% of
> U.S. businesses. This aint the 1950's! Wake up and smell the coffee. The pro-64
> that Bill wants you to buy is filled with semi-conductors made in Malaysia.

And Uniden's are filled with Chinese and Taiwanese parts.....

> Like it or not, this planet (that's what we live on, not a flag in space) is
> quickly turning into ONE WORLD, thanks in large part to the internet,

Ahhhhhhhhhhhh, yesssssssssss! The New World Order.....where at long
last, after centuries....the Iluminati are on the verge of getting
it all.

> Can Bill tell me how I set a PRO-64 to tune in 50 hertz steps in the HF band?

Nope. But you can set WiNRADiO to 50 Hz steps in the HF band.

> Where is the illuminated keypad switch on the PRO-64?

At the end of your flashlight?

> How do I enter 350.350 Mhz, AM Mode on the PRO-64 to listen to the

> 243.0 Mhz? 868.9875 Mhz? Can I use Wideband FM to listen to the new fast food
> headsets on the 64? The PRO-64 audio still sounds crummy to me. My yupi has the
> best audio of any handheld scanner I've ever used. Jeez, classical music
> actually sounds like classical music!

And it is illegal. Why doesn't Yupiteru Co. get the thing certified
and market the hell out of it here in the US?

> I know you like lots of memories Bill, why does the 64 have only 400? The 7100
> has 1000.

I don't know, but I can easily stick 6400 channels in the PRO-64 and
load 'em up with a computer.

> Now on the other hand...
>
> (Consider the 64 represents uniden's patents holding and technology that was a
> couple of years ahead of the yupi-7100)

GRE. Not Uniden.

> PRO-64 features the 7100 doesn't have-
> +Computer Control (Not yet supported by tandy)

Oh yes it is supported, but it dosn't need to be anymore. We've got it
figured out. Tandy can go whistle.....

> If bells, whistles, legality, ease of use and support are are important to you
> buy a radio shack or uniden product. If you want sensitivity and selectivity
> that will leave you in awe buy a yupi.

And.....break the law. Send your money where it supports the
Europies and the exotic Orient.

> >Ownership, possession, and whooping up the illicit Yupi
> >radios only serves to irritate our Congress Critters and the
> >Friendly Candy Company (FCC) .....who then add insult to
> >injury by creating MORE....not less.....laws against our
> >hobby. There's one more facet for you, pal.

> So discourage people from looking for a superior product because our
> congressmen's votes were purchased?

It's not buying votes that keeps Yupiteru from submitting
their wares for certification. It's Yupi's decision. The
law does not discriminate. Icom has to certify their radios

same as GRE, Uniden, and Relm. Yupi chooses not.......

> Keep a low profile at all costs - including reality? Bill, you
> always struck me as somebody with some gumption. I'm shocked.

Until now, your argument has been interesting and relatively
upbeat. I hope this is not the turning point. You see, that
which you perceive as a lack of gumption is only my inability
to afford $20,000 multiples of fines and JAIL time. I am
absolutely certain that if I get slapped with a hairy assed fine,
I'll be very much alone in my dealing with it.

Don't throw that one one me until a 20-kilobuck check is attached.

> Agreed, "Better" is a relative thing. The 64 doesn't out perform even old yupis
> (the 7100). The 9000 leaves it in the dust, both with regard to performance AND
> features. It doesn't appear that you give sufficient review to radios you will
> never make any money off of.

Ohhhhh gawd.....here we goooooooo.......... Same old shit; same
old story; same old slam. That shit gets mighty old and helps
dispel any empathy that might ever arise in me..............

> And frankly, it really peves me off when you slam
> those same radios. In some cases it's warranted (the radio sucks), but you are
> way off base this time. The yupis rule.

Yupi will *NEVER* rule - take that to the bank! Not until the
company certifies their radios and sets up a marketing and
support office here in the USA. Yupi may rule in Afghanistan
or Timbuktu. Not here.

> Oh yeah, listening to cellular is
> illegal, too, Bill, don't you support that law along with import restrictions?

This shit is getting awful old, pal. Before you insinuate that
spew again, how's about checking the copyright dates in ALL the
materials to which you refer....and infer...... In truth, sum,
and substance, I do *NOT* advocate anything about cellular.
Get your ducks lined up before spewing any more of that shit, okay?

> (There's a delicate, gray area, balance here. In the U.S. if you support
> cellular listening

Don't assume that I do. If you think I do, then show the
basis of your thinking. Otherwise, hire someone to do your
thinking for you.

> I don't advocate breaking the law, though getting arrested for
> breaking an un-constitutional law is nothing more than the first step in
> getting it struck down via court appeal.

The ECPA is over 13 years old now. Intact. Unchallenged.

> If nobody ever broke ill-conceived laws some folks would still be in
> the back of the bus and women wouldn't be able to vote)

True, but not relevant to this issue. We're not going to
win this one by flaunting the law..... we already are
the gross minority.

> In final reply...
>
> Yes, it's not strictly legal to attempt to import one though the mail into the
> U.S. It's even illegal to operate non-fcc type accepted equipment in the U.S. I
> don't believe in bending the truth in order to dscourage people from trying to
> do so. Who has done time for importing a scanner?

Time? Or paid hefty fines? Check with ACE Communications in
Indianapolis. Check with EEB and Grove for what the threats
alone are like.

> Why aren't our efforts
> directed at changing or challenging out dated laws passed by corrupt
> politicians, instead of flaming each other?

You tell me. At least speak for yourself and tell me.

> At what point did Bill Cheek become
> such a supporter of arcane U.S. import policies??? I find this depressing. Come
> on Bill, I know there's a little of the non-conformist still lurking in your
> tired spirit.

I'm not going to sit here and add insult to injury by
flaunting the law. Furthermore....Yupiteru *could* join
the US market if it wanted to. Obviously, it doesn't want to.
Since it doesn't want to and since it is illegal to bring their
wares into this country, it is a totally moot matter to factor
their radios into the scope of what we're all about.

They're illegal and cannot possibly be a market player in this
country except to and among a cultist elite....a tiny, insignificant
group that carries no weight in the greater scheme of things. This
group advocates illegal acts and only heightens the resolve of
the Congress Critters to deprive us of what hobby we have left.

Far better we support the companies who do invest in this country
and in the hobby community. In any event, it serves no useful
purpose to support Yupiteru and to blow smoke up their asses.
They've got nothing to give us but they are there to take our
money. Give yours to them, if you want. I guess a prosthetic
in any form costs money.

But nothing you've said stands a snowball's chance in hell of
being any beneficial value to the greater picture. The ONLY
benefit is to your own ends. Even though THAT could be called
"selfish" in the same vein as some of the adjectives you used
on me, I'll still defer to your personal decisions, regardless of

ambition and motivation. You want one; you got one; and I don't
give a hoot. I remain a staunch supporter of individual choice.

The fact still remains.... In the big picture, Yupiteru is a loser.

Else it would be here. Simple.

1866. Re: BC9000XLT Keypad tricks ?

Newsgroup: rec.radio.scanner
Date: 1997-12-17 00:00:00 UTC
From: ligosa@aol.com
Message-ID: <19971217042100.XAA21064@ladder02.news.aol.com>
Source record: 177136

****Uniden Bearcat BC9000XLT Tricks****

Info from Dave Rodriguez (Uniden Corp) & Jeff Zeman (73252,3645).
Additional info from Larry Parnass (Monitoring Times)
File written by SYSOP*Jeff Goldman WA1UDB.

By holding down the 2, 9 & DLY keys as you turn the 9000XLT on, you enter a sort of Test Mode. To do a "keycheck test" you can hit any key or turn the VFO knob either direction and the alpha display will tell you what key you're touching or which direction you're turning the VFO knob.

At this point, if you momentarily hit LOCK (to the right of the VFO knob) and one other button various things will happen:

LOCK & C - REPLACES ALL MEMORIES w/1300MHz and alpha-tags channels 1-250 with CH 00-249 in the display. Again, will effectively wipe out your memories!

LOCK & D - Checksum and Firmware Version Number (v.09 in ALL 9000s to date)

LOCK & E - LCD Display Test

LOCK & PROG - Runs a short, continously-repeating Demo Program incorporated specifically for showing at the Jan 1995 CES in Las Vegas. It also sounds attention tones as the message scrolls on the display! (Note that the word "scanner" is spelled "Scaner" in the demo program; it was too late to change this booboo that originated in Japan.)

The last three tricks will NOT wipe out memory. Only LOCK/C will do that.

Additional notes

There are more tricks, but they're currently being translated from Japanese. One of these has something to do with using the CTCSS button to change "Decord" from High to Low. No info yet on this.

The Uniden Sales Dept specifically requested that cellular images be included in the BC9000XLT (since it's legal to do that). The front end was left wide open to allow this in the 360-385MHz range.

No reason available on why the FM filtering is narrower (ie less HiFi) than on the BC8500XLT. It was done in Japan without explanation.

The audio amp doesn't shut off as in the BC8500XLT during quiet periods. There was an improvement in the circuit, but this means a bit of hiss when no transmissions are coming through.

All BC9000XLTs (whether built in 1994 - serial numbers 45+ - or in 1995 - serial numbers 55+) have firmware version 0.09. And all have AM mode available on any frequency the scanner is capable of.

The BC9000XLT is capable of having an alpha tag attached to any channel, but 250 tags is the limit. (This was verified by doing the LOCK/C trick. The scanner loads 250 tags and shows a memory full warning if you try to enter additional tags.)

A tip from Larry Parnass (Monitoring Times)

You can use the SND button during a Search as a sort of Radio Shack-type MON button, transferring a freq to any bank you'd like to become your "Monitor" bank. With RS scanners, you have to go through extra steps to transfer the memories from Monitor channels to permanent channels.

Now for the trick. I don't know if this is covered in the manual but try this. Select manual. and press the status key until you hear 2 beeps. the readout will tell you about 5 differant settings on the radio..ie:turbo search off etc.

Ahhhhhhhhhh haaaaaaaaa! Big "if" there. US Customs ordinarily does
not return to points of origin those items its interdicts and/or
confiscates. Sounds like a free "if" to me.

> I can't say for sure if this policy applies to

Ask 'em what is the effect of this policy if US Customs confiscates
and retains the shipment.

Heh heh heh........

Source record: 177144

Michigan and at least a few other states use 155.370 as a means for different PD bases to communicate with each other for mutual aid type situations.

It is known as the "Inter-city" or "point-to-point" channel, but many of the dumber public safety dispatchers & officers in the SE Michigan area mistakenly call it "Inner-city." At least one PD I know of even has the "INNER CITY" channel name embossed on the channel's control head on the dispatch console, compliments of Motorola.

Gotta tell you, Bill's 2 Way of Morgan Hill, CA (http://www.bills2way.com/) has them for only $109 each, or $218 for a pair. They have a toll-free order phone at 888-710-4094. I love my Kenwoods, and got them for $250 from another mail order vendor, before I heard about Bill's. BTW, Bill's also has the new Cherokee FR-465 FRS, aslo for $109 each.

No, I don't work for them, just wish I had found out about them before I ordered.

I plan to try them air-to-air. Range should be incredible. I think these new FRS may fill the gap between ham and commercial VHF FM for hang gliding and paragliding. Both services are used there now, as the United States Hang Gliding Assn. has three licensed freqs in the 151 MHz commercial band. But commercial traffic is so high, and the benefits of repeaters and auto-patch with ham has gotten many HG and PG pilots to get their Tech tickets. With 308-mile cross-country flights that take nine hours and flown to a legal maximum of 18,000', range could be incredible.

I may have to try the Kenwood's on the coast to try this out. Thanks.

Radio Shack's Magnet Mount Scanner Antenna, 20-012, is about the
minimum for acceptable performance. 16" or smaller simply won't
perform below about 100 MHz. You'd do just as well with a rubber
duckie on the scanner inside the vehicle.

You might experiment with Radio Shack's 20-006 telescoping antenna for
a mobile situation. You'd need to make a mount for it, but it might do
something of what you want.

Take a look at Radio Shack's 20-012. Anttron used to make a magnet
mount scanner antenna, too, but I don't know if they do anymore.

Dennis-

A little over a year ago myself & a few others stood up against
an individual who was seriously abusing this NG. I am pretty
much the only one still around of that original group
that were standing up against the problem person. There were
a handful of demented individuals who support him & still do.
As a result, some of them attempt to cause trouble for me on this NG.

At the time, it was called the "Cheek Wars".

To get an idea, you might read the thread "Wells Vs Cheeks".

On well, life goes on.

Dennis Lassetter wrote:

That is three times tonight (in my part of the world) that john has
told us that it is not illegal to import receivers into the US.
If he is posting in context, he is talking about receivers that are
not approved for sale in the US.

John
You might be correct....I really do not know.
But if you are eventually proved wrong, will you apologize three
times ?

I am not taking sides here....of course you will probably not
agree...but you really do protest too much.
A point well made need only be made once.
Brian

:> 154.4000, 154.2950, 154.3550, or 154.2650
:>
:> Lotus
:>

In this area the police have some channels around 78Mhz and some around
468Mhz. The fire department is now using the Government Radio Network
which is a trunked system on 416 to 418Mhz.

You're certainly
:welcome "Robo". It is such a pleasure to help point an "up-and-coming"
:in the right direction.
:
Those frequencies
:you seek - They seem to elude you. You are not alone. In fact
:the designers of cordless telephones had in mind a simple strategy:
:Make the phones have the ability to transmit conversations in such a way
:that the handset need not be connected to the base by a wire. It
:was through this vision, that technologists began to develop the cordless
:phones. To accomplish this, they devised an ingenious method of transmitting

:this information. It is through radio signals that this is accomplished.
:Radio signals - as old as the universe yet as new as today for those with
:the eyes to see new ways to put them to use.

How are we supposed to read that garbage?

What a moron.

Now, John Mackey has been the one abusing this newsgroup, for well over a year now. You'll notice that within the last 24 hours, he has posted numerous messages here, not a single one devtoed to the subject of scanning. In the past year, he has posted 1000-plus messages and only one on scanning (actually one on pagers).

:over 20 miles away and on one occasion copied a conversation from a cordless phone
:base in California

Actually you would be lucky to receive cordless phones 2 miles away with
a very high antenna. More likely the best you could ever do would be less
than a mile.

:(hot skip, huh?)

Cordless phone are never heard via skip as the do not have enough power
to reach the atmosphere.

I once picked up a "Long distance cordless phone" from an auction.
Both the base and portable/mobile units were rated at 4.5 watts and
they worked on 31/51Mhz. It came with an amplifier for each end that
boosted the output of each unit to 30 watts.
That is the sort of "cordless phone" that you might hear via skip.

The MR8100 scanners seem to be difficult to come by lately, but I have
the original software, along with a Windows shareware version available
downloadable from my Web site below. The programming cable required is
merely a standard RS-232 cable with DB-9 connectors on each end.

> stuff I see here, but I'll never forget his response.

Nor will I forget your inflammatory, snide, provocative,
ornery, cantankerous, snotty, pissing, and moaning note.

You seemed to have forgotten (or never knew) that BBS's
are private property and subject to federal and other
regulatory snooping, sniping, and harassment. It is
customary all over the world to disclose a certain amount
of personal data before gaining access to a BBS.

You didn't like it. That's fine. But you came on to me,
Bubba, like a whining, sniveling, peckerwood. What you
seemed then and seem now to fail to understand is that
I *didn't want* your business. Your money was no good after
the way you came on to me. You broke *MY* contract in
terms of how I deal with people. You weren't decent. Why
did you expect me to be?

Some 5,000 others before you filled out the BBS security
questionnaire without a snivel or wetting their pants.
You had to be different. That's fine. But you had no bitch
coming. You could have just signed off and let it go at that.

I operate on a 2-way basis with people. They get treated
exactly like they treat me.....plus one better. Treat me
decent, and I'll go the extra yard. Treat me the way you did
and I'll hose you every time.....in e-mail, in the newsgroups,
or even in person. <shrug>

2-way is my game, pal, and if you don't like it, then kindly
note the mistletoe on my shirttail and respond accordingly.

Comprende?

If he have tell-me he was in trouble I would not do that but instead to
tell-me he do not have money he say "the MO is in the mail" after 3
weeks I ask him send the serial number of the MO so will put a claim
he said I do not have-it but "will send-you another one" after another
3 weeks I wrote him asking for the serial number of that one HE STOP
REPLY TO MY MESSAGES.Now who is to blame?He just have to be honest and
explain that to me and he never did-it.He have wait until I start
putting his name on the NG.Please give-me a break,HONESTY ALWAYS PAY

.....and furthermore, Jerkov, here is the info you were required to
fill out to gain full access to the BBS:

*** Greg Elmassian completed questionnaire at 23:11 on 20-Feb-95 ***
Comply? : Y
Agree : 1
1st-Name : Greg
LastName : Elmassian
Birthdate : 08/25/55
Address : Why? <--------- And you complain?
City : Encinitas
State : Ca
ZipCode : 92024
Country :
Ocupation : Manager
Employer : Nippondenso
Dayphone : 619-obscured by SysOp
Nitephone : 619-obscured by SysOp
WSR : N

Okay, dude, just exactly where is this "all kinds of personal
information" that you allege? The above taken straight out of the
database is all that was required. It's equal to or less than required
by a lot of other BBS's of the time.

So what is your problem? You failed to follow the rules.

Would you like for me to display the hateful, asshole e-mail
that YOU sent to me FIRST?

Take a flying hike, Elmassian.

As a third party looking in, and without taking sides, I can tell you that:
(1) It is unlawful to import and use a receiving device capable of receiving above 30MHz into the U.S. unless it has been FCC-TYPE-ACCEPTED

(2) It is not unlawful to import and use such a device into the U.S. for the purpose of "research & development purposes", however, you had best have a darn good reason for using the above as your waiver

The above information was obtained directly from the FCC compliance department. In short, Bill is correct providing the receiver and/or transceiver is capable of frequencies above 30MHz.

Sorry,John, the ARRL does not make, enforce, or intrepret law.
IOW, don't ask the ARRL, especially about scanners.
In context, it *is* illegal to import a scanner that tunes to the
cellular frequencies. The law is very specific. I've quoted it several
times here and other venues.
Look it up.

Alpharetta is on Fulton's trunked system, but here are some
frequencies you might want to plug in:

Alpharetta Fire : 855.2125
Public Works : 155.9250
Police : 856.2625

lotus1981@aol.com (Lotus1981) wrote:

1918. Alinco DJ-X10 vs iCom R10

Newsgroup: rec.radio.scanner
Date: 1997-12-18 00:00:00 UTC
From: krkirkwood@sprintmail.nospam.com
Message-ID: <MPG.f0275b7485ed5d098968b@nntp.a001.sprintmail.com>
Source record: 176885

With all things being equal, which would be the preferred radio? The Alinco or the iCom? Since they're both similar in price, thats not a discriminator. However, I do want computer control, and with the DJ-X10 not yet in the states, (is that true?) would this impact my ability to obtain the needed H/W and S/W for computer control? This is not my primary HF rig (have a Yeasu FRG8800 for that), but it will in all likelyhood become my primary VHF/UHF radio. One area of interest to me is the MilAir bands.

Rich Wells has done a fantastic job reviewing both, and I'm now leaning towards the Alinco now instead of the iCom, but wanted to get some other opinions/feedback.

Thx -K2

For your edificatin: it's "on-topic"

For your self: I see in your postings a very very sad little
boy. Looking for his mother's teat and being given
the bile from pig shit...which you create. Then blaming
us for your tasting it.

You evidently are fetched from a loud FUTT your mother
forget she made when having sex with your family
goat. It shows.

What a lack you possess. You accuse and yet history on this
NG proves you to be a pathological basket-case.

There is really nothing to continue on with you about in this
NG. Observing how you cannot handle anything besides cleaning
your excrement off your whazoo.

You are to be pitied. You are to be reviled. You are to be
created equal: to something real.

What others have posted you fail to answer and instead attack
with some juvenilistic monotonous verbiage gotten straight from
your grammar school refresher course...which you evidently fail
loudly. Others open your sores and you are there: in the pit
with the excrement you created and playing with the yazoo.

You are less than able to comprehend anything which is written
for your place...you have nothing to say.

Why not just leave it that way: Don't pretend to know
what you say by not infecting this group with boredom and
gross amounts of ennui.

For myself: you don't exist in this life. It's trying
now to post about you or for you in this NG. It's time to
move on and allow you time to "compost".

All the rest of you who have any kind of mind-credentials
will stop this bull-shit with this cranial pervert and
go on to better things.

As I have said to you before: Please Stand Up and Take a
Load Off Your Mind (and us).

Mackey: go infest another NG. Try "alt.angst"

bill conduit
etc.

1920. Trade Compaq computer for 2005/2006 scanner

Check out KC5KTO's Scanner Modification Page
(http://w5gb.nmsu.edu/kc5kto/base.html)

PRO-2026 mods:

Cellular restoration (http://w5gb.nmsu.edu/kc5kto/mods/pro2026cell.txt)

I also own this scanner, and there is nothing about that mod that will nuke
the scanner. The ones that aren't modifiable do not have the L-201 wire you
clipped. The same thing happened to the first 2026 I got, because I powered
it up without the skin on it and shorted it somehow (D'OH!) Fortunately, it
was still under warranty, so I just put the skin back on and played dumb
with the manager at rat shack, who unwittingly replaced it. Hate to break
it to ya, but once that happens, the radio's hosed (at least mine was). You
could send it in for service at any radio shack, but chances are they will
charge you more than the price of a new one. Besides, rat shack has mobiles
now that are 10 times better than the 2026 was.

Source record: 176889
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I reciently purchassed the BC-9000XLT w/CTCSS. After checking out the scanner for proper operation I found that the CTCSS board was not working at all. I placed three calls to Uniden. Each and every person, including the customer service supervisor told me, and get this:

"After programming your CTCSS board, if unwanted stations continue to interfer just lock them out".... If I lock them out then why did I have the CTCSS board installed?

The call takers and Supervisors at the 1-800 of UNIDEN are NOT being trained to assist the customer but to bull shit them.

I have never been so pissed off at any company as I am at UNIDEN, $500 and the damn thing still doesn't work properly. I have a call into the V.P. of Operations of UNIDEN pending. Having over 30 yrs in electronics I just can't imagine why UNIDEN would instruct their customer service people to tell the customer such bull shit.

Hope YOU have better lick with UNIDEN.

jr

1923. ramsey ss-70a descrambler modifications

I have that descrambler, but it doesn't descramble the signal I want correctly. It works well with the cordless phones, but with my city police service, it is not descrambled "completely". As one of you told me a few months ago, I tried to change the crystal, presently it is a 3.58 Mhz, I tried a 3,68 Mhz and it changed nothing. So I would like to know if there is another to modify it (changing a resistor for a potentiometer for example) or which crystal frequency should I try (0.2 MHz bigger, 1 MHz bigger...I have no idea?)

Thanks

Robert,

I've owned both, and the only real difference is the scanning speed,
which becomes a moot point with the OS456. I'd be interested to see
some sales figures, but I think the 2006 was in production for quite a
bit longer. I only remember the 2005 being in production for
approximately 1-1/2 years. My father still has a 2005.

Barry

Roswell/Alpharetta agencies use Fulton's system.

However, Roswell Fire still uses 460.600 for fire department pagers.

And Fulton County Fire dispatch simulcasts pages on 154.325MHz.

Well I don't think I have had any problems with Uniden myself. I
recently ordered a users manual for my BC8500xlt and they were very
friendly and cooperative. I have a CTCSS board installed in my 8500xlt
and yes you can still get inference with a CTCSS board. Nothing is 100%
perfect... Hope you get your problem taken care of thou....

Well, there you have it, folks. Hard evidence that, despite his
denials, Cheek DOES instigate the personal attacks and namecalling.

KUT7BH asks a simple question, and even respectfully addresses Bill as "Mr. Cheek." In return, Cheek gives him a blast of sarcasm and personal insults.

Incidentally, Cheek, KUT7BH is not a ham call, so your insinuations about a bogus ham ticket are specious.

<Grrr>!

>Also I do not know what "recuse" means,but if the 2005 I trade you for

Without jumping into the meaty part of the thread...

"recuse" appears to be a typo of "excuse".

If I read what he wrote correctly, he wrote:

"... piss poor excuse for a scanner..."

In non-slangeese, the statement roughly translates to:

"...so crappy that it can hardly be called a scanner..."

It appears from your response though, that while you didn't understand
the typo'd word, you understood perfectly, the context of the statement
as a whole.

Gee, Bill, now I know why you are so loved in this NG!!

By the way, Mr. Cheek, I don't "register my radios" for a sense of belonging. I just thought I'd point out the difference between an amateur callsign and a Registered Monitor callsign since you seem to be one of those know-it-all radio hobbyists who thinks he's God just because he's considered an AUTHORITY on the hobby.

I'm not hiding behind my screen name, Bill. My name is David and I live in the Western United States. If you want to discuss this matter further, e-mail me. Otherwise, go start a flame war with your buddy John Mackey.

'Nuff said.

I think the actual performance is the same. The 7100 just is fancied up a
little with LCD display, More memory channels, and somewhat faster scan speed.
I don't see any advantage in changing myself.

::
::
I recently took back a Radio Shack Pro 2040 Base Scanner, because of poor reception and
harmonics problems.

I purchased a Radio Shack Pro 90 Trunk Tracker Radio.
I do not know much about these radios, but I have read the manual and understand
how they work. The salesman told me that if I were to buy ANY scanner
that is not a trunk capable, I was wasting my $$ because the scanners
that are now will be obsolete within one year. Is this true? I paid and extra
100 for this handheld scanner, which I must say, is a BIG HUNK OF CHANGE
for a disabled person.

I am new to this stuff, and want to make sure it is as important as he makes it
sound. I was planning on getting the pro 64 (400 channels with 800 Mhz.), but
he talked me into buying this one!

I would appreciate ANY input on this matter....
It is GREATLY appreciated!

Reply to Black-plague@usa.net

I haven't done this but I'm from Canada and I can tell you that if your pro-46,51,60...(U.S.) isn't modifiable, 99 times out of 100 our's (Canada), are not too. Most of the scanners (RS) in Canada if not all of them are imported by Intertan Canada, from the same factories that the US does. If it said in a mag that you can get a modifiable scanner to get cell Freq's from Canada, it's probibly a new scanner but from old stock. (pre-what ever that law you guys have down there) So if a new... Pro-Whatever comes out in the states and it's also out in Canada it won't be modifiable... This would probibly go for Uniden and Bearcat also. (Walmart Canada gets it's stock from south of the boarder) I'm not sure about the U.K. though, if they can get a scanner thats modable I'll buy it in a heart beat. From one ham to another, unless the Canadain company is a big firm and you don't want a old scanner (Pro-34,46,51...), make sure that your getting the real thing.

Body handling: HTML body converted to readable text

So many people own these really nice scanner set-ups with 20 foot antennas in their back yards and $700 worth of equipment and they seem to think all this is good for is listening to the police activity on the weekends.

Below is a listing of the basic 10 & 25 channel (non-900 MHz) phones. There is a frequency for both the base and the handset of the phone but you should only need to program in the base since that picks up both sides. If you program in the handset, usually you'll only hear one side of the conversation but sometimes when they're finished with their call, you can still hear what's going on inside their house. The sound quality of this sucks, though. Channels 1 through 25 are the 25 channel phone freqs (of course) and channels 16 through 25 are the 10 channel freqs. If you only have a ten channel scanner then program in the base sides of 16 through 25.

Channel Base Handset

1 43.720 48.760
2 43.740 48.840
3 43.820 48.860
4 43.840 48.920
5 43.920 49.000
6 43.960 49.080
7 44.120 49.100
8 44.160 49.160
9 44.180 49.200
10 44.200 49.240
11 44.320 49.280
12 44.360 49.360
13 44.400 49.400
14 44.460 49.480
15 44.480 49.500
16 46.610 49.670
17 46.630 49.845
18 46.670 49.860
19 46.710 49.770
20 46.730 49.875
21 46.770 49.830
22 46.830 49.890
23 46.870 49.930
24 46.930 49.990
25 46.970 49.970

Message-ID: <67d02b$j1u@examiner.concentric.net>
Source record: 176929

I have had dealings with Andre Pelletier; he is an honest guy! I bought a manual for CDN $14, he sends it registered mail, pays over 5 dollars postage so he can send me a scan of the receipt! If there's a commerce problem going on involving Andre Pelletier, I'll bet you he's on the losing end of it. If he says Philip Knode is not bargaining in good faith, I believe it.

Hey Andre, if my french was as good as your english, then I would be so proud! 30 years of cereal box reading has got me nowhere.....Just give them a couple of lines a francais, then proceed in english. Never apologize, my friend. Those people who would criticize, they speak how many languages? Just one, I bet.

I don't know if I agree with that, I own a couple RS scanners and even thou Uniden produced alot of equipment for them I still prefer the Uniden models over the Radio Shack models. But thats just my opinion.

>past
>year, he has posted 1000-plus messages and only one on scanning (actually one
>on pagers).

You know if you responded only to issues of topic. Posters would not deviate by more than one or two articles. If there have been 1000 or more off topic posts in the last year, its because they were encouraged to be put there by participation in the off topic debate, or ravings,...which ever applies.

So if you see an off topic post and respond only on topic, the thread will either return to topic, or stop. Either way, the off topic posts stop.

Realistic Service Manual PRO-2006 Programmable Scanner Cat.
Number:20-145/9145 consists of 80 pages of material printed front and
back w/ several double-sized pages of schematics. It is copywrited
1990. I do not know the law on copying such material (copywrited) if it
is out of print and Tandy does not intend to print more.

>frequency is assigned to which.

You are correct. In the VHF band 154.950 is called "innercity mobile" or "car-to-car". Mobiles transmit on this freq and base stations transmit on 155.370. However, in some lager cities (at least in Texas) that operate on UHF, 453.550 has been adopted as a "innercity" channel as well.

Yes, I have been accused of being a "hippocrite" from time to time, but most folks spell it correctly. Yes, I also post flames from time to time. However, every now and then, I'll toss in a post related to scanners. When do you think you might improve your signal to noise ratio? You're posting at a rate of about 1000 flames to one on scanners (make that one on pagers).

Since someone replied the pro 64 can't be moded to receive cell freq's

which current inrexpensive units can? is the pro 2004, 2005, 34 or 37
still available?

Here is some info I found about moding .....

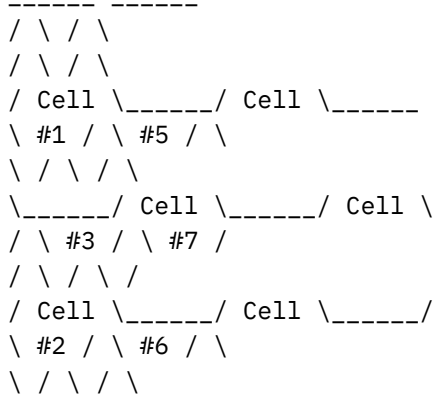
HOW CAN I MODIFY MY SCANNER TO RECEIVE CELLULAR?
1. Buy an older scanner before they stopped them from receiving the
necessary freqs (look at garage sales)
2. For a Realistic PRO-2004 open the case and cut one leg of D-513.
3. For a Realistic PRO-2005 open the case and cut one leg of D-502.
4. For a PRO-34 and PRO-37 cut D11 to return access to 824-851 MHz
and 869-896 MHz.
5. Get the "Scanner Modification Handbook" volumes I and II by Bill
Cheek from Comunications Electronics Inc. (313)996-8888.

^^

HOW CAN I SCAN CELLULAR PHONE CONVERSATIONS?
Cellular telephones are a great source of info as they are used by
doctors, lawyers, and other big business. They are also a great
source of calling card numbers.

Cellular phones operate on a very simple premise. They receive on
one frequency and transmit on another freq in order to allow
simultaneous communication. The area is split into two bands
(Band A and Band B) which are split into 21 cells (hence the name
cellular) and each cell has 16 channels within it.

Cellular arrangment:



_____/ Cell _____/ Cell \
/ \ #4 / \ #8 /

Band A uses channels 1-333 and Band B uses channels 334-666. Usually
the first channel in each cell is the Data Channel (333 for Cell 1A,
331 for Cell 2A, etc.). There are simple formulas to calculate the
frequency for receive and transmit for each channel.

Transmit freq = (channel number * .030 MHz) + 870 MHz

Receive freq = (channel number * .030 MHz) + 825 MHz

So for Channel 333: T=879.990 MHz and R=834.990 MHz

FOR BAND A
==========
Cell #
Chan 1 2 3 4 5 6 7

1 333 332 331 330 329 328 327
879.990 879.960 879.930 879.900 879.870 879.840 879.810
834.990 834.960 834.930 834.900 834.870 834.840 834.810

2 312 311 310 309 308 307 306

We use a phone system where I work, it is made by Erricson. The system is a small cell phone setup. It works in the 1.2ghz range. The system is short range. One cell unit can handle about 12 lines.

Sly Kapchinski wrote in message <34988F1C.5EF4@txcyber.com>...

Never happened, but as long as it makes you feel better....

Here's another challenge - show me my post where I admit defeat (Sorry everyone. I know this is another whole world for the lunatic to dive into)

I've won my challenge to you. Loonie. I think all the piss fumes from changing all those bedpans is getting to you bigtime.

You've even managed to piss off others (BIG SURPRISE) because you can't find scanning related posts from you.

Whatever you say, Johnny boy. Whatever you say.

If it makes you feel better to come up with lunatic lies, fine with me. At
least you're only fooling yourself.

You truly are a friggin mental patient!

1990. Seek Info on Radio Shack 2 ch. crystal monitor

Newsgroup: rec.radio.scanner
Date: 1997-12-18 00:00:00 UTC
From: n2ywd@aol.com
Message-ID: <19971218144001.JAA17548@ladder01.news.aol.com>
Source record: 176996

I recall RS selling a small 2 channel crystal scanner/monitor a number of years ago. It was about the size of a Motorola Minitor pager. Don't know the PRO-xx number or catalog number. Can anyone help out with info on this unit ?

1991. Gear - sell/trade

Newsgroup: rec.radio.scanner

The following gear is in excellent condition & works fine - I'm just
cleaning house....
No C.O.D's - will split ship (CONUS only) - advise zip code in reply.

1. RS HTX-202 2mtr Hand held w/batt & ant - $110
2. MFJ 20mtr (cw) QRP transceiver - $110.
3. Pyramid Phase III 35 amp (variable) dual mtr Pwr Supply - $125
4. Emco PS-12L (HD) 10 amp Pwr Supply - $30
5. Kenwood PS-52 Pwr Supply - $135
6. Icom IC-PS15 Pwr Supply - $115
7. MFJ 208 2mtr SWR Analyzer - $45
8. Kenwood SW-2100 (dual mtr) SWR/PWR meter - $120
9. Icom HM-12 hand mike - $30
10. Icom HM-7 hand mike - $40
11. Ham II rotor w/CDE Control Box & 100' hookup wire. - $170
12. Oskerblock SWR-200 SWR/Pwr meter (dual mtr) - $65.
13. Alfa 7705 Capacitance Meter w/case/leads - $70

May swap for radio scanners - 30 chnl and up - old or new, but must
work perfectly. No crystal units. Prefer Trunk Trackers - RS 2004/5/6
or similar...but will consider all.

Inquiries welcomed..

John & Robert Lewis
St. Louis, Mo. 63116

first if my words do not match the "correct english"sorry for that I am
french.
My bad deal with Phillip Knodes is not from yesterday it was from
OCTOBER 18 so I have been more then patient before putting his name
on the newsgroup.My goals are :for shure have my money back or undo the
deal,second?save another one to be ripped,what is wrong with that?
there was couple of postings but most of them have "fictif"addresses so
when your enough a man to crictisise another one you can also be a man
in putting a "real"email address,but one of thoses reply came from
Phillip Knodes himself.Also I use the newsgroup because m.Knodes did not
reply to the last email I send-him last week asking him the serail
number of the money order he send-me,if he have reply his name will not
be here "yet".Now I am sorry to bother thoses who have nothing to do
with that but I will not accept be "flammed" by peoples who have not
enough guts to put their name or reel email.
thanks

Scanner Manuals-

Well it looks like RS is in the service manual business again.
I just called (0730-Thursday morning, Dec. 18, 1997) and placed an order for some service manuals that were on the restricted list on previous days. There was no hassle by the person taking the order. The only thing I can see that is different, is the price has gone up, on some service manuals by as much as twice the price.

Guess they figure they will make money on us, if we purchase their product.

Good Luck Icstars@flash.net

1994. Antenna Length Question

Newsgroup: rec.radio.scanner
Date: 1997-12-18 00:00:00 UTC
From: rsa@litenet.net
Message-ID: <67be88krf1@ostrich.cybercomm.net>

I want to mount an exterior antenna on my jeep to track marine band (156).
What is the recommended length antenna to scan this band, 19" ?

Thanks.....

Rich

I know that the Home Depots use a cheapo 900 mhz phone, with range
about throughout the store depending on where the base is located.
This was not an "installed" system, rather the ingenuity of some savy
employees to make their job easier.
Seemed to work pretty good.......

Careful guys. The phone may use a fairly uncommon method of
modulation analog to digital to spreading code to QPSK and then back,
and it may use a spreading code, BUT YOU CAN BET THE SPREADING CODE IS
THE SAME FOR ALL UNITS. Yes, these phones do transmit a fairly long
binary code ahead of the dialing instructions to prevent unauthorized
access, but that's not the same as using a different spreading code
for each handset.

I've been looking at these things. I'll bet they're using the same
chip-sets. It may also be that each manufacturer has it's own
spreading code. However it's likely the code is short, and it's
probably the same across the product line. I can't wait to buy one in
a post holiday sale to see what's inside...

In any case, as long as nobody else has the same model phone in your
area, I doubt anyone short of the NSA will bother to listen in. Just
remember, this stuff goes unencrypted on to a piece of copper wire and
leaves your house. It won't matter if you use the best encryption
around. If someone really wants to listen in, it isn't difficult to
put a high impedance amplifier across the copper pair leaving your
house. And no, a bug detector won't find it, either.

Ain't it funny how computer coding geeks worry about all this stuff
and then put their mortgage checks in the mail expecting the spit on
the envelope to keep everything ok?

Happy listening...

Andre,

First, there is no need to apologize for your English. Those who cannot understand that you are from a different culture are small-minded people whose opinions should be ignored. Likewise those who hide behind an anonymous e-mail address and don't sign their own name to their posts.
As for Philip Knodes and your deal with him, as I said before, I have done a couple of deals with Phil with no problem, and I know others who have dealt with him and have also been satisfied.
I did not realize until today that your business with him is only two months old. While I realize that a delay in receiving payent is annoying, or worse, if you really need the money right away, two months is not a very long time to spend trying to work out a problem, especially, if as his wife says, Philip has been in the hospital. While you may have reason to be suspicious, I feel you were premature to publicly label him a thief and a liar.
If there is anything I can do to help mediate your dispute with Philip please let me know.

It is considered the "Forbidden Fruit" among radio
hobbyist. The problem can be solved and it is so simple.
Legalize listening to cell phones and allow for the production
and/or importation of celluar capable radios. The Cell Phone
lobbyist (CTIA) brought it among themselves with these
ridiculous laws and bills. If they left well alone, it
wouldn't be the circus that it is. They should have offered
scramblers instead of laws and regulations on radio receivers.

As for "forbidden fruit", it is human to rebel against
whatever regulations that are imposed especially if there
are no reasons for them like laws on banning certain freqs
from radios.

JT before saying that read emails exactly,Phillip Knodes is not in an
hospital the one at hospital is BC8DII who own me money since august
how come you take always his side"are you a friend of him?Two months
is enough,I would have love to use that money to give some gifts to my
KIDS,it is christmass as you can see.You always reply directly to the
newsgroup instead to ask-me directly your questions,why? Well anyway
Phillip Knodes never reply he got my money,his excuses are "the mo got
lost(we hear that a lot),I send-you a new one but when ask for serial
number?he did not reply because he never send-it,how long do you want me
to wait?If two months is not enough for you JT PLEASE if you have a
scanner for sale sell-it to me after we will see your reaction.So why
not
ask-me directly instead to tery to make-me look bad,you use the wrong
emails
to make KNODES look as a victim of me,if you have read the title of
postings you will have see it was not HIM who was in hospital.

So what you are saying, in essence, Mr. Cheek, is that there is a high probability that a "contraband" scanner which is exported to the United States will be seized by US Customs, and that Bandercom, Atlantic Ham Radio, etc. are making a lot of money off of naive scanner hobbyists who are dumb enough to believe the disclaimers which accompany their ads??

2020. Need Advice: BC3000XLT vs. PRO-26 and others considered

Newsgroup: rec.radio.scanner

Help me! I'm looking for a higher-end handheld scanner and have been looking at the BC3000-XLT and the PRO-26. It seems like the Uniden is $100 cheaper but what are the differences between the two? Also are there any other scanners I should consider that would fit this bill? I need full coverage (minus cellular). Too bad no-one makes a full-coverage trunktracker.

I believe Uniden America bought up Regency as well as Bearcat. Don't have
the Uniden service number off hand, but have it at work. Large scanner
dealers would probably be able to steer you to third party repair stations
too.

>
>Thanks.

A reasonably cheap RG 6 or 8 would be all that you need. With only 33 foot run, you are wasting your money trying to squeeze out a few more tenths of a dB loss with more expensive coax. The human ear can't detect the difference here. Even a poor cable won't give you much in the way of loss at this distance, although I wouldn't use RG 59.

Although the better connectors are type N followed by BNC (I prefer the BNC cuz its twist lock rather than screw on), Even the old standard UHF connector won't give you any noticable loss if you install it properly. All the baloney you hear about UHF being lossy is just that, baloney. Even at 1 GHz they are withing a couple tenth's dB of a type N. (ref. ARRL QST magazine, Jan 1998, page 59.)

However, if you are hell-bent on wasting your money to squeeze out a fraction of a dB on a 33 foot run, then don't even use coax anyway. The absolute lowest loss antenna feed is open wire feed... such as the type hams use, Get some open wire 450 ohm ladder line and purchase two 4-to-1 baluns, one for the antenna end, and one for the receiver end, and install the ladder line away from any metal objects.

> So what you are saying, in essence, Mr. Cheek,

Geezus H. Kriste, KUT7BH, why don't you READ what I said? And what
the other guy said so you can relate to the context of my reply?

> is that there is a high probability that a "contraband" scanner
> which is exported to the United States will be seized by US Customs,

Where....in heaven, on earth, or in hell....did I indicate anything
relative to "high probability"? I said nothing of the sort. But
please help me.....is English not your native language? If not, I
will try harder to write so that you can understand me. If English
is your native language, then I will leave it to you to try to grasp
the fundamentals of reading comprehension.

> and that Bandercom, Atlantic Ham Radio, etc. are
> making a lot of money off of naive scanner hobbyists who are dumb enough to
> believe the disclaimers which accompany their ads??

Awwwwwwwwwwww fer Pete's Sake!!!!!!! Geezus, man, do you come from
this end of the Universe or....from the other end? Shooooey, man, you
HAD to read a certain amount of English to pass that ham radio test.
Or did the VE gundeck it for you?

Read what I said AGAIN. It's there. Clear. Succinct. And most
of what I said....happened to have been a QUESTION. A question
that hasn't been answered yet.

The fact is....according to what that other feller posted, those
companies offer refunds *IF* the merchandise is returned to them.
There is nothing in the statement about refunds *IF* Customs
does not return the seizures. Therefore.....I ASKED the question.

Good grief! How can you read anything of "essence" into that?
Let's wait until the dude answers the questions, and then I
will give you some "essense" if that's what you're wanting......

(bunch of useless Bill Cheek drivel snipped)

Settle down, Bill!! For hell's sake, radio is a hobby, not your life!
(Well, I guess since you make your living writing scanner modification handbooks, radio is YOUR life. What a pity.)

Really, Mr. Cheek, if you would not be such an arrogant S.O.B. and constantly attack those who don't benefit from your vast knowledge of the scanner hobby, you might sell a few more copies of your scanner modification handbooks. Do you get some sort of perverse pleasure from flaming someone who is just trying to gather some information about the radio hobby? If so, do us all a favor and get a life, Bill.

> Shooooey, man, you
>HAD to read a certain amount of English to pass that ham radio test.
>Or did the VE gundeck it for you?

By the way, Bill, your ignorance is showing!! My AOL screen name has nothing to do with amateur radio, as it's not a ham callsign. It's a Registered Monitor callsign issued by CRB Research Books.
Try tearing yourself away from the manuscript of your latest scanner modification handbook for a few minutes and you might learn the difference between an amateur callsign and a Registered Monitor callsign . . . or are you so caught up in your own arrogance that you can't be bothered with such trivial poop?

2027. Contacted by FCC

Message-ID: <01bd0b6c$84cad220$41cfe1cf@uibel>
Source record: 177071
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I was contacted by a guy from the Furniture Company of Colorado. He asked me if I had anything to hide. I have a hide-a-bed, and a couple of folding chairs, and that's about it. I tried to show him the door, but he wouldn't look at it. He seemed interested in my radio. He asked "what the hell " I monitor on my radio. I showed him my radio, and he told me it was a cellular phone. It was used to pick up cell phone calls. I guess I paid $575 for a cell phone. Now I need a scanner radio or he will force me to leave this newsgroup. So that explains why I get cell phone calls on that thing. I guess that clears up a lot of confusion in my mind, now I'm able to handle more. This man has changed my life.
Also -thanks to the guy who forwarded my posts to the FCC, he did a real service to everyone. The FCC has a seen an example of a ridiculous troll, but I'm sure he's a nice guy anyway.
Thank you all for sending me mail in my "newgroup" mailbox. It's nice that you all take the time to write me so often. I'm going to tie my frequency counter to my dog and take him out to meet Benito the K-9 crime dog. I'll let him get loose and he'll go up and sniff the crime dog, and the sting officers will come over to separate them, and then presto I'll have their frequencies.
-Emilio

>comments please.

If you want an R7100, look for a clean, used radio.
I sold one with a speech board for $1100 a year ago.

The price dropped on ICOM's latest R8500. If you are going
to buy new, I recommend the R8500. I've had all three
models and prefer the 8500 over the 7100, and the 7100 over the 7000.

They are all excellent receivers (not necessarily
scanners). I used them as test instruments as much as I did
commo receivers.

I posted this several years ago:

COMPARING THE ICOM R7100 TO THE R7000 RECEIVER

by Bob Parnass, AJ9S

The radio RF/IF/AF portions of the R7100 are similar to the
older R7000, but the R7100 is constructed using surface
mount parts. Consequently, the R7100 is smaller. A-B tests
indicate both the R7100 and Radio Shack PRO-2006 receivers
are about equally sensitive, and more sensitive than the 6
year old R7000. Both the R7000 and R7100 are much more
immune to intermod than the Uniden/Bearcat 760XLT and the
portable PRO-43.

Many of the functions controlled by separate rotary switches
and potentiometers in the R7000 are controlled by pushbutton
switches and firmware in the R7100.

Deleted Tuning Meter, Added AFC

Too bad the R7000's analog center reading meter function was
replaced with 3 indicators on the R7100, a left arrow, a
square, and a right arrow. In my R7100, the square lights
if you are tuned within 2.5 kHz of center of an FM station,
a larger window for WBFM signals. The arrow indicates the
direction in which the tuning knob should turned to center

the receiver on the signal.

The R7100 has an interesting AFC circuit, controlled by a front panel switch. The AFC will automagically tune the receiver close to the center frequency if you tune near an FM signal. You can watch the frequency change as the AFC steps the receiver in 100 Hz increments (on NBFM). The AFC never quite tunes to the exact center, but tunes within a window set by a difference amplifier circuit, so the station sounds good even though the R7100 is slightly off center frequency.

Modes

R7000 and R7100 users have the same choice of modes, but they are easily selected from front panels controls in the new R7100. A rear mounted slide switch is used for USB/LSB selection in the R7000.

Fancy Firmware for Memory Organization and Scanning

The firmware in the R7100 is much more sophisticated, and a brief article wouldn't do it justice. There are 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. There are many possible ways to scan, more than listed here. You can scan:

all channels
all channels in a given bank
all channels in a given group
all channels in a given group in a given bank

all channels in a given emission mode
all channels in a given emission mode in a given bank

As with most other scanners, there is a lockout bit for each channel, so you don't have to scan the NOAA weather channel even though you have it in memory.

There are 10 pairs of search limits. The search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. I used this for searching for federal stations in the 162-170 MHz range while skipping the NOAA weather channels 162.55, 162.4, and 162.475 MHz, as well as some veteran's hospital paging channels.

The R7100 has 2 VFOs, but Icom calls them windows. There are several window scan modes, but they resemble priority scan modes in a Bearcat scanner.

Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Perhaps a bigger draw-

back is that both the R7100 and R7000 employs a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the Icom user with a very annoying clickety-clack, clickety-clack!

New Memory Query Feature

The R7100, like the Bearcat 200xlt, has a feature which allows you to detect memory channels programmed with duplicate frequencies.

Tuning Step Selections

The R7000 tuning step size is selected using a rotary switch. The R7100 tuning step size is selected by using a pushbutton to step through the selections. The R7100 has more choices, including a 100 kHz step, useful for tuning around the aircraft bands.

Another new R7100 feature is that a tuning step size can be stored into each of the 900 memory channels, so when you use the tuning knob to tune off a memory channel, the R7100 tunes in reasonable increments (e.g., 12.5 kHz in the 450 MHz range, 10 kHz in the VHF-low band, etc.).

Rescan Delay Added, but Nondefeatable

Icom finally included a decent 2 second rescan delay in the R7100 which owners complained was missing from the R7000. Ironically, you cannot defeat the rescan delay in the R7100, so it's now more difficult to scan trunked systems in which the frequency changes with each new repeater transmission! Using the VSC voice squelch helps shorten the rescan delay unless scanning noisy stations.

Power Supply and More

The internal power supply in both radios runs hot. The R7100 comes with a 12 VDC power cord included, an option in the R7000.

The R7000 comes with a handy carrying handle and rubber feet, an $8.50 option on the R7100.

Added Clock and Timers

Unlike the R7000, the R7100 contains a digital clock and timers which can be used to turn the radio on and off, and tune to different channels, several times each day. I probably won't be using timers, though.

Which Radio to Buy

For fast, reliable scanning, you still can't beat a PRO-2006. If you want SSB reception, computer control, or a radio with a tuning knob and lots of features, I recommend the Icom radios.

The R7100 is more complicated to use than the R7000. There are so many firmware controlled features and there are several 2 key sequencies.

Faced with choosing between an R7000 or an R7100 in a similar price range, I prefer the newer R7100. Sensitivity aside, both are about equal communications receivers, but the R7100 is a better scanner, especially for finding new frequencies and organizing memory.

Dale,

I am surprised that you had this problem with Grove, I've bought
from them several times and they always have been honest, prompt
and knowledgeable.

The problem you experienced was almost certainly an honest mistake
or oversight. I'd talk to Bob Grove personally and see what he
says about it, he's always been more than helpful when I've dealt
with them.

Hope this helps,

Jon

I have the following Radio, and electronic equipment for sale. Reasonable offers will be considered. All working last time tested unless noted. Shipping is Extra

Thanks

Kenwood TS-820S - Digital Ham Transceiver 120-10 meters. Looks good and works well. 100W output. $400

Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $250

Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks good and works well. 250-300W PEP output on SSB. $225.

Siltronix VFO Model 80. $75

National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $250.

Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $150

Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

Pro 62 - As new. Purchased 4-5 months ago. Still under warranty. Have original sales receipt box manual etc. It is triple conversion Hyperscan 200 channel scan covers from 30-960 MHz.with some gaps $150+ shipping.

Sears- 10 channel Crystal Control Table top Scanner. $50

Regency- 10 channel Crystal Control Table top Scanner. Wood case $50

Realistic Pro30- Programable Hand Held 16 Channel scanner. 30-50,108-136, 138-174, 380-512 Mhz. $60

Craig- 6" Reel to Reel Stereo Tape Recorder. $50

AR Inc.- Stereo Amp, all solid state. $125

Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150

I don't know where to find it either.

If you can get hold of a circuit diagram of the
scanner and can find your way around a circuit
board from that you should be able to find it
and take it out via screened lead.

If you're not competent to do this, take it to
someone who is....a dealer or repair shop.

73 & Merry Christmas.

gee...because you are handicapped is that supposed to
make us feel sorry for your decisions you make?

what a bunch of bs....don't frolic in the mire.

as for you decision: is your wheel-chair all paid
for? If so, then decide why you bought the pro
tracker.

What are you listening for? are the agencies in your
area on tRunked motorala system?

If not, then you got a great scanner at a high
price you could have gotten for hundreds less at more
reasonable locations....

If you are making money with the scanner, price
is relative...in time you get your money back.
if you are chasing news stories in your
wheel-chair, it won't do you any good if they are not on
trunked Motorolla sys. If not, then better buy a turbo
charged wheel chair to get you there faster.

I know someone in a wheelchair that chases news
stories...so don't give me this "insensitive" guy bullshit.

You made a decision based on "RS-droid-speak"....

hey, you made a friend, right. what else is there to
going into RS and paying money for....

Gee little one...why not call Grove up and speak with
Bob Grove>...the guy is a saint.

this way you won't have to bring this questionable post
to group. I've been dealing with them for years and
to date they have never misrepresented what they
had in stock.

You see...when I order a product, the nice telephone sales
lady goes to the computer...she says: "yes, we have "this"
and "That" and THAT TOO", but we don't have "THIS ONE"
and abbott and costello refrain in the background....

She gives you a back-order approximation of when it will
be in and when you should get it.

They don't like making enemies with their customers. It's
BAD BUSINESS. do you know how long this firm has been
in business? The Bob-Guy is a Saint Hammer.

He's a bit prone to not understanding what a compliment is
when paid him, but hey, no one is perfect. But he does
take "back-0rders" seriously.

why not give Bob a call and tell him I sent you and see
what happens. If he hangs up on you, well, he has not
forgiven me for my complimentary letter to him. If he
grants you an audience, then you can Bless Him. He and
the DOPEY POPE are like that....e-mail pals...

Hi Jack,

Although I would NEVER even consider listening to the forbidden cell band because it is sooo illegal.. I'll bet if you listened to enough of those conversations that they would not only become boring but demonstrate to you that there are alot of people out there who's lives are a whole lot worse than your own, regardless of how bad it may or may not be. I'll bet it would be a great way to study the human animal..

Best wishes... Mike

In defense of Grove...

I have gotten nothing but first rate service from Grove Electronics in the past. I even won an optoelectronics DC440 DTMF decoder in a contest (it was called "treasure hunt or scavenger hunt" I know I'm getting old...) in popular communications magazine, but Grove not only flipped for it but had it to me very quickly. No complaints from me on Groves operations or ethics! Just my opinion of course.. Best wishes.

| >> promising.... He installed it in a PRO-2006,...

This is a reposting.

I published this passage in a 9/97 Monitoring Times G/Wiz review:

"...Scanning Ericsson EDACS trunked systems is more challenging.
When a station stops transmitting on an EDACS system, the repeater
carrier remains on the air and 3 annoying scanner-jamming beeps
are transmitted. While your scanner is stuck listening to the beeps,
the conversation has moved to another channel. Some hobbyists
have equipped their scanners with a G/Wiz board as a countermeasure."

"Simply put, the G/Wiz circuit instructs your scanner to start
scanning again as soon as it hears the first beep tone.
A G/Wiz-equipped scanner will not distinguish between talk
groups like a Trunktracker, but it will scan right past the beeps
to find conversations. The G/Wiz is touted as being able to skip
over mobile data terminal transmissions as well,
though we couldn't verify this."

"It is not designed to handle channels transmitting encrypted
voice or continuous control data, so control channels should
be locked out of your scan list for best performance."

"Broadcast engineer Terence Brennan originally developed the
G/Wiz to help news gatherers at his broadcast station monitor
the local sheriff's EDACS system. The G/Wiz became popular with
local scanner hobbyists and is now available through
Scannermaster (tel. 800-722-6701) and The Ham Station (800-729-4373)."

"G/Wiz can be installed in most Radio Shack and Uniden scanners,
including base and portable models. There are two versions of
G/Wiz. Each version is optimized to work in different model
scanners, so it's important to specify the make and model
of scanner when ordering...."

I have had several experiences with Grove Enterprises and they have all been exemplary. If someone had a bad experience then I'll bet there was a misunderstanding somewhere. Furthermore, I'll bet it can be cleared up with a phone call. I will continue to deal with them as they often have real bargins ie. TrunkTracker for $250!

> "I wanna hear him TALK TOUGH!!"

HUH! Get a copy of the San Jose Merc News today.

Go to Editorial and see what the BIG BOYS
of our Federal Government are doing to Bill Gates
because he is "genius" and they are not....

The government is going after Microsoft because
is is TOO successful and does not pay retribution to
Congress and our beloved pres and queen ... Mr and Ms
Clinton.

Seems the Clintons have brought the "you owe us this"
because of all the money you make because we allow you to
because you "contribute big time" to our fellahs we send
on excursions to collect taxes for the pres and the Queen.

I thought this was out of merry old England during the
days of King Edward and sons....when the peasants had
to pay their tithing to the king so he could piss in
private...

That's San Jose Mercury News...actuall the story appeared
in the Washington Post...article by: james k. glassman...
merc news story date is : december 19, 1997....page 7b

both newspapers are on the net and have net pages....

Seems large companies have to pay the congress and the
house and the pres and his staff tributes...and Gates is

one who feels that "he is not the governments toy" and
they think otherwise. he does not suck up to the Clinton
psyche or the government who want their due from the
people who bring to market things that work.

so here we have more similances of how government
is a American Mafia...they just call it by another name:
it's called: your share.

Or else they go after the company and get their money
via government lawsuits and anti-trust suits and tax files
being subpoenad and more....

Bob Grove went up against this mentality.

It's called: American Government at Work...for themselves.
Just as the Kings and Queens of England of old did.

Gee...what else hath the English mother-land taught us from'
the past...their heritage brought to fore today?

Oh yes...JESSE-LIMP-HELMS.

>Someone posted some info. on a simple mod. for the PRO 64 that would
>allow the radio to charge regular NI CAD batterys while in the radio. It
>will charge the battery pack that you can buy but will not charge the NI
>CADS.

Look at the contacts in the battery compartment. The middle one is ground. The very outer one is where external DC power comes in. The next-to-edge is where the battery power comes out. On the NiCad battery pack, there is one wide contact for the edge and near-edge, so external DC flows into the radio and the batteries. On the replaceable cell pack, there are separate contacts, so the batteries are isolated when on external power. Bend a piece of soft metal into a U and hook it over the end of the battery pack so the contacts are joined.

I did not think of this; a couple of other folks here did. But I love the concept.

Ken Plotkin

CNN Breaking Story.....

After a magnificently planned prison break using ideas stolen from the movie "Escape from Alcatraz" which had been shown weekly in the mess hall after chow. Emilo Goldstein, John Mackey, Mr. Jingles, Benito the crime dog and the Unknown laugher guy (who was the prison librarian and a confessed non virgin) escaped to freedom today. No shots were exchange with prison guards although a tremendous amount of verbal abuse was exchanged which held the guards a bay and caused many of them to question their manhood. All are still at at large except the Unknown laugher guy who was apprehended while harassing a RS sales guy trying to sell him a scanner.... And it wasn't a Pro-2006 either. Hmmm.

Grove has never claimed to have items in stock when they are on backorder. If there was a mistake made in inventory, which we cannot control, and we learn of it, we try to contact the customer and let them know. When an order is placed it goes through several different hands before it is processed. When an item is on backorder, we do not charge the credit card or deposit the payment until the item has been shipped. WE have always done our best to keep our customers happy and have a very liberal return policy. We apologize if you have had a bad experience.

I just can't understand why there is such an interest in listening to telephone conversations. OK, maybe it's because the Feds don't allow it.

The hell with a bunch of cellular calls, if your a real scanner listener then you would be out for better calls.

Or, you want to know who is screwing who in you town and hope to cut in.

Get a life.

I just found a good 43 at a local pawn shop, while doing an unmentionible modification I have done something to it. Now when I turn it on I can hear a muted click from the speaker, but that is all. I went back in and rechecked everything I had done. The only thing I found questionable was on the bottom board where the metal sheild solders on the top left side has a lot of solder that goes over the the IC3 chip, the top left pin. Is this supposted to be this way? Anyone out their with a service manual that could look this up for me I sure would appreciate it.

Thanks in advance
Mark Haynes

Well some areas like Seatle Washington has nothing but Trunked systems
for police/fire. However other cities are still running VHF/UHF until
the FCC stops them. Phoenix (about 40 miles from me) is currently
running VHF/UHF freq's for Police & Fire. In about 5 years they are
supposed to switch to a 800Mhz Digital system. Am I planning on buying a
trunk tracker, only if the small town I live in goes trunked! I don't
know what the departments in your area are currently using and plan to
use in the future, but NOT ALL agencies will be 800mhz trunked within a
year. You can be sure of that!!! I think this sorry SOB that sold you
the scanner was thinking solely of his commision. If you aren't happy

with the radio, take it back and tell him you want a differnt scanner or your money back.

Source record: 176811
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The bc235 trunk tracker works fine in sacramento county. The city has one system and the county has two systems. The frequencies are available via uniden's web page (somewhere). The talk group numbers are available, but I can't say where. I suggest purchasing the 2nd volume of trunking frequencies from mobile radio resources, when it is published.

The radio in search mode, will find everything, just a matter of waiting and writing numbers down.

i got my first scanner today and im having a blast! my question is if i
got a good unit.the salesman told me that the only handheld that would
work well (in columbus ohio) would have to be a trunk tracker.
he sold me the BC235XLT for 249$ and i went into the store thinking I
needed the 3000xlt (a more expensive unit) did i do good?

Let me tell you.. the trick is that the first one makes it through.. it has to! however, we'll go as far as it takes - we don't offer this to all people of the world, no.. may be you'll have think this over.. what makes us really do it? We would not do this to Singapore, North Korea, Iraq etc.

Where can you legally buy a brand-new "unblocked" AR8000 in the U.S. for $422.00?? Don't give us BS about buying it from outside the U.S. (i.e. England)...they can't be legally imported "unblocked" from what I've heard.

You're real quick to point a finger at AR8000 sellers for selling at high prices...please post several places here in the U.S. where I can call to buy an "unblocked" BRAND NEW AR8000 for $422.

Real life, REAL people, REAL situations, REAL jerk offs, REAL assholes, is just some of the things you can hear, learn and overhear. Just think, your best buddy, whom you think the world of, and has been so since childhood, just called your wife, and told her you were cheating on her, she got jealous and performed fellatio on him, and he called his buddies to tell them what a great job she was.

This example is just .00000001% of the delicious stuff you might hear. Also, how you insurance agent screws you, how your doctor is human, and how your banker is a crook. Just keep listening. Have the scanner running in the background while you hack away.

You'll be surprised at the interesting stuff you can and will hear. It's sobering, humorous, entreating, and more.

Enjoy!

> Javiation...73s Mike ka3jjz@erols.com

Latest word has it that the FCC is picking the X10 apart for fear
there is some way it can be made to get cell freqs directly. Alinco
hopes for early Jan '98 release but 2-3 months may be more realistic.
Seems there is no definitive answer on when the software will be
made available here.

And careful what you say Mike with a rabid Cheek on the loose. He'll
think you should be sentenced to death for promoting the importation
of contraband. He really does care though...he worries that should
a war break out or martial law be imposed here in the US, you'll be
shot on sight for owning such a receiver. He is so practical...

Was surfing the web and some company offered an instant weather mod for the bearcat BC140. I know this isn't a great radio, but I've done the 16 channel mod, the priority mod and tapped the discriminator and scan outputs. I know it's probably just a two wire mod to hook up instant weather, so if anyone has the info for the weather mod, I'd appreciate it.

Replacing the crystal with an ocillator circuit
will work fine, making it possible to
descamble just about anything. a choke from
an old tv set and a variable tunning capacitor
will cause an occilation in the circuit. The
choice of Cap & choke have to be such that
it will occilate at about what the crystal did .
Cant help you any more than that. There
are a lot of occilator circuits in various electronics
books.

I don't necessarily agree with his statement. There is plenty to listen
to besides trunked systems. Conventional systems (non-trunked) will be
around for quite a while longer, as not everyone has the money to spend
on an expen$ive trunked system, or they may be happy with the way their
conventional VHF/UHF system works.

> I am new to this stuff, and want to make sure it is as important as he makes
> it
> sound. I was planning on getting the pro 64 (400 channels with 800 Mhz.),
> but
> he talked me into buying this one!

I live in an area where the only non-business Motorola Trunked Systems
is over 80 miles away. Here, everything is Ericsson trunking or
conventional, so my trunktracker doesn't get much use, unless I travel
or want to listen to the local Motorola SMR. Now if I lived in an area
where most of the PDs and FDs were on Motorola Trunked systems, I would
say that getting a Trunktracker is VERY important.

The systems that are conventional in my area are not in any hurry to
change. However, Trunked systems are getting more and more popular in
this county, and the area you're in may be already trunked or going that
way in the future. My trunktracker may not be getting much use right
now, but if a local public safety agency goes to a Motorola system, I
will be happy that I bought it.

Either way, I think you've got a good scanner, and even if the local
public safety agencies in your area aren't trunked right now, they may
go that way in the future.

19" would be OK, but according to my 1/4 wave formula 2808 / freq, the better length would be 18". You may however, consider a marine antenna. Since you mention that you have a Jeep. If it's a Wrangler, it's body may be fiberglass. If so, the antenna you build will not have the proper ground plane. If, however, you have one of them there fancy SUV type Jeeps you will be OK.

The Los Angeles Co. Baywatch Lifeguards are still using their old 37 MHz system as far as I know...the next scanner book should be out within the next month and I will advise if they did switch to 800 MHz...but for now, they are still on 37 MHz.

You need TWO to tango. Please, PLEASE, stop this dog fight (you too,
John). I have stopped visiting this newsgroup due to the excessive BS
running around here. Let go and the fight will slowly die. Take a
towel and bite hard, just don't answer. PLEASE. ALL OF YOU. Forget the
past and how you've been mistreated. Show that you're above this crap.
Listen to the few that try to talk some senses into you (and I mean
ALL these dogfighters). Instead of fighting here, just stop talking to
each other, and the fight will die. Behave like adults. Ignore the
childish insults.
Hoping this will help stop this pathetic situation.

sad,
Tinkerman.

There is no such thing as a secure phone, it may leave your house scrambled
and spread, and twisted, and coded,and use 800 freqs in the process but when
it gets to the other end it is put back into a easily receivable
transmission, THINK ABOUT IT you are communicating with ordinary phones most
of the time, cordless, cell, and ordinary land line. I have a friend 3
blocks from me who has the ATT 9300 when I call him on my cordless, I can
listen to the whole dam conversation at 46.930, my cordless freq. THINK
ABOUT IT. Use a LANDLINE then you can pat one another on the back about how
secure your conversations are.

customer service and price, of course.

Well, Radio Shaft scanners are made by Uniden!
And as far as the price, Radio Shaft is usually astronomically higher than
anyone else. Like 149.95 for a basic VHF/UHF handheld?
Get real! The name brand sells for round 89.95 elsewhere!

>
>From his trusty grid laptop in Sunny St. Louis
>on the road again......

Detroit Police "Channel 5" 453.550 is a repeater usually used for
short unit-to-unit communication. On some occasions it is used
for special events, or as a backup if a district channel repeater
is down. A unit wishing to communicate with another directly will
request the dispatcher on their local district channel to ask the
other to switch to channel 5. After the other unit acknowledges,
the two leave the district channel and conduct their business on ch.5,
then return to their district channel.
The individual units do not switch to the district repeater output
frequency. Also, as on most systems, the dispatcher on the district
channel
can switch the repeat function off, so listeners only hear the dispatcher.
Monitoring the input frequency to hear the direct transmissions
of the units is possible only if they are close enough to you.

> Sorry to have upset you, Mr. Cheek.

You don't upset me, Mister KUT7BH. There is nothing to be upset about at all. I got me a "registered monitor number" complete with a certificate. It came by e-mail yesterday.

So now I am just overwhelmed with this warm, gooshey, fuzzy, wet feeling and a sense of belonging and of being accepted. It's almost ecstacy, but you know what I mean.

So now, armed with this official registered monitor number, I can go forth into the newsgroups and pick on people, too, without waiting for them to pick first. I understand where you're coming from now. Having a registered monitor number and a certificate is kind of like having a hunting license.

Zzzzzooooooooooooowwwwwwwwie! Yaaaahooooooooo!

> Best wishes for a happy holiday season and
> a good New Year. 73.

Why, thank you very much, Mister KUT7BH. As soon as you come out of the closet, I'd be pleased to wish the same of you. But "Mister KUT7BH" is a non-entity; just a closet number up there at AOL.

C'mon, don't be afraid. Lots of people are coming out of the closet these days. It's the "in thing" to do.

Or....just how long would stand the policy of shipping even
the second one. You can only give away so many freebies
before the store is empty.

> Despite the probability that most of them get through customs, the
> fact remains that they *are* subject to seizure.

I would venture to suggest that ALL of 'em so far are making
it through Customs. That's what has lulled everyone into this
warm, fuzzy feeling of security. No one knows of even a single
interdiction. I don't, anyway. But I know it's a matter of time.

This current crop of radioists apparently don't know how the
FCC operates. Everybody thinks they are crippled because the
FCC doesn't have any money. Yeah, that hurts the enforcement
side a little.

But all they do is save it up and lop off a bunch of heads in
one fell swoop and then the scene is crippled for years thereafter.

The funny thing is.....if everyone who has a smuggled radio
would just keep their yap shut up about it, then all kinds of
good times might be possible. But no. Oh hell no! A "North Carolina
Editor for the Scanner Club" goes and gets him one of these contraband
Yupiteru radios and then has to tell the whole world about it.

Drums up business. Ratt-atattatatatat-tat. TaaaDaaaa! And so
a bunch of other folks go get one. And then they yell, holler, and
whoop it it. Then pretty soon, they're all into Yupiteru baseball
caps, Soupy Yupi Poopy tee-shirts, and Yupiter Of Th Woods chewing
tobacco.

And they start a Loopy Hoopy Yupi Hootenanny scanner club, and have
parties, and dance, and slurp creme de menthe and mint julips.

It ain't gonna be but a matter of time before the FCC comes
snooping around to see what all the ruckus is about. And wham, bam,
wrap it up, the party's over. And a bunch of sad people cry in
their beer and fingerpaint together in the puddles on the bar.

It's an age-old story. It wouldn't be so bad if folks weren't
deluded into thinking this is America, the land of the free and the

home of the brave.....

Well.....they ARE "brave", I'll hand 'em that much.

Send it in to Uniden to be fixed. I can't remember what it cost
exactly, but it was around $30 and they even put a new battery pack on
it, which covered the cost by itself. It was the 200Xlt. I would
suggest sending it in, as NOTHING out there you can buy now is going to
sound a tenth as good or as loud!

In Canada, RSs provide (this is unofficial. your information only
!!):

Within 30days

- Return at no cost
- Exchange at no cost

If Under $100,

- Exchange at no cost within one year
- Exchange at no cost within three year with extended warranty

Repairing is usually very smooth compared to other companies... no
shippment, no hassles.

I have several RS radios and scanners and I am very happy with the
function and the service. Sometimes, you get something that doesn't
work, but you don't worry about it because they will exchange it
instantly (for most of the products, within 30 days).

Hi all.
Just wondering if there is a way to make the Pro-64 scan faster. I have a feeling its all software based but its worth asking I guess. (maybe I should have kept the Uniden).

Thanks,

Dieter Wenzel
dieter2@ix.netcom.com

2110. Beware of GROVE ENTERPRISES

GROVE Enterprises is taking orders and claiming they have items in stock when the items are actually on backorder. This just happened to me and now it is too late to get the items I need for Xmas. I guess they figure that when you find out you aren't going to get the items they promised to ship "this afternoon" you will just let your order with them ride..

Does anyone know of a reputable mailorder dealer?

The stock NBFM filter will *not* be 5 kHz wide. With a 5 kHz deviation,
and a peak modulating frequency of 3 kHz, the filter *must* be at least
13 kHz wide. Normally, NBFM radios are fitted with filters either 15 kHz,
or more commonly 20 kHz, wide.

For 10 kb FSK data with a modulation index of 1, you need a filter which is
at least 30 kHz wide, preferrably 35-40 kHz wide to allow for phase non-
linearity at the passband edges. Murata makes suitable filters. Digikey
sells them.

Dear Santa
- I wanna descrambler that will work on Bill Conduit's (BAYCITYVIDGRP) posts
- I wanna picture of Bill Cheek and John Mackey kissing, (I lost the only copy I had.) If that is not available I'll take the one of Bill and Rich Wells holding hands
- I wanna everyone to wake up xmas morning and for twenty four hours hear nothing but cell phone calls on every freqs of the spectrum or until they realize it is no big deal.
-I wanna spell checker for my Email incoming and outgoing so that I don't get flamed or flame others for spelling errors, Please Santa get the one with the grammer checker option.
-I wanna every toilet, rest room, outhouse, shitter or whatever have all the cordless phone frequencies posted on the walls so that they will never have to be asked for again.
- I wanna all radios to come with every mod ever invented for the same reason as above.
- I wanna hat like Emilio so I can take it off to that Phil guy who wrote that hilarious Emilio Goes to Prison Post .
- I wanna every one to have a Merry Xmas, including Radio Shack and all the people that work there, and even that Tauzin guy I read so much about.
- I wanna sell my six radios and get a life, I think I've lost it.

Icom (IC-R10), Yupiteru (MVT-9000), and Alinco (DJ-X10) have each
introduced high end handhelds which borrow some from the AR8000 feature
set. In some cases, some features are better executed (e.g. the bandscope
on the MVT-9000) and in some cases not (e.g. the slow scan speeds on the
Icom and Alinco models). As of now only the Icom is FCC certified for sale
in the US. The AR8000 is still an excellent package, warts and all, but
since their US distributor is leaving the consumer market as of next year,
the supply might be doubtful.

And why don't you crawl outa that catshit-loaded sandbox and
stand on your own two legs and speak for your own smart-assed,
liver-lipped self?

> By the way, Mr. Cheek, I don't "register my radios" for a sense of belonging.

Soooo, why then? There can't be any other bona-fide reason
unless it's to fool people into thinking you are a ham. Does
that Officially Registered Monitor KUT7BH number give you a
nice, warm fuzzy feeling?

> I just thought I'd point out the difference between an amateur callsign and a
> Registered Monitor callsign since you seem to be one of those know-it-all radio
> hobbyists who thinks he's God just because he's considered an AUTHORITY on the
> hobby.

I didn't pay close attention to your "registered monitor" number.
It resembled a ham call sign, so I gave you the benefit of the doubt.
It's a helluva lot more respectable to be a ham than a "registered
monitor". What the hell is a registered monitor anyway?

(Golly, Ma, I ran into an officially registered monitor today! Wow!)

In fact, I gave you the benefit of the doubt and didn't suggest
that you were hiding behind an AOL screen name until after you
pointed out that I should not give such benefit. So now you're
a sleazy "AOL hider behind a screen name"..... <shrug>

> I'm not hiding behind my screen name, Bill. My name is David

David WHO?

> and I live in the Western United States.

Where abouts "in the Western United States"?

Sheesh......don't tell me you're not hiding behind the anonymity
of your AOL screen name. That's exactly what you're doing, Bucktooth.
That yellow stripe down your back side goes from the top of your
head to your sorry heels...and where it forks sure makes a nice
bullseye. You might consider keeping your back up against a wall.

Your sweetie Mackey was voted most popular bitch of Cellblock 19.
But you just may be runner up if you're not careful.

> If you want to discuss this matter further, e-mail me.

I don't e-mail nitwits, imbeciles, morons, nincompoops, and lids.

> Otherwise, go start a flame war with your buddy John Mackey.

People like your transvestite sister Mongrel Mackey are
on my Shit List and I don't even *see* their posts, much less
talk to them. Take you, ferinstance....it ain't possible to
have a sensible conversation with you. I'd druther slap a booger
outa Mackey's nose and feed it to her, just to hear HER guttural
grunts as opposed to your inept nonsense.

Guess what List you're fixing to get slapped on? Take a
wild hairy-assed guess and the first two wrong answers won't
count against you.

On second thought, even a certified nincompoop would guess right the
first time.

Pack sand, pal.

Well, "Certified" is the correct process as opposed to "Type
Acceptance" which applies to transmitters and is a more rigorous
process than certification.

But yeah..... the law most assuredly applies and it is time
some people knew it before they get told by da judge that
ignorance is no excuse.....

Good point Jack. I fell for it though. Several years ago, when I first started scanning, I found out that you could hear cell calls. So I went out and got an 800 mHz scanner the following week. Listened to those phones for about 2 weeks strait. That was enough for me. What a let down.
By the way, the scanner I bought was an AOR AR900. I never hear any one talk about this scanner, does anyone in the NG have one? Poor audio and a slow scan rate. Also the volume and squelch dials seem quite frail, though they have not yet been a problem.

Kevin P

Now I am a bit confused, seems that I could buy a new CPU or the Opto board from one of the out of country exporters. Which shall it be? Any opinions or advice? I can allready see that I should have just spent a few (a lot actually) more bucks and bought one of the AOR/Icom models, everthing that I need would have allready been in place, but then that contradict my long standing record of making rash and hasty decisions. Anyway I really do like my 2042 and would like to build it into something that I can be happy with for a loooong time. How about trunktracking ? Does it work with the right hardware/software combo in regards to the Pro-2042 ? Thanks to all who have helped this idiot (me) out.

Yes, I know that. I'm trying to get hold of the I.F. frequency of my
modified scanner (PRO-36) to get a replacement filter. Can anyone on
this newsgroup provide this info?
There's also the issue of "non linear group delay" of the i.f. filter,
causing excessive jitter in the signal.

>for more theory on digital radio, read the publications of the
>Amateur Radio Relay League. Hams do a lot of digital stuff these days.

Have you heard about someone who has acheived around 10K baud with a
scanner?

I'll see what I can dig up, but usually this is a mobile-to mobile
freq, that is not yey digitial in detroit.
Also, if you hear them say this to dispatch, usually it would mean
that they are going to switch to the repeater output.
This way, everyone close can still hear them, but it doesn't get
broadcast throughout the city

2141. Re: Channel 5 DPD

Newsgroup: rec.radio.scanner
Date: 1997-12-19 00:00:00 UTC
From: cnn1@ix.netcom.com
Message-ID: <67ct43$h1q@dfw-ixnews4.ix.netcom.com>
Source record: 176956

Channel 5 (453.55) is a citywide frequency where units may talk directly to one another, through a repeater, without going through a dispatcher and without tying up dispatch freqencies.

A police car requesting a tow truck, for example, might switch to Channel 5 to speak with their precinct directly for the request. Or a supervisor might tell a car to go to Channel 5 to ask its location to stand by for a meet on the street. Etc.

Channel 5 is also used for prolonged operations, such as barricaded gunmen situations and special events, i.e. the Freedom Festival fireworks. In those cases, the channel is reserved for that purpose and other car-to-car chatter is not allowed. In fact, a dispatcher is usually assigned to Channel 5 when it is "closed" to regular communications.

>I realize that it is illegal to import scanners that receive the cell
>band into the US. But is it legal to ship one to the US for
>repairs/modification and have and sent back out of the country.

If it has been modified to receive cell phones, I've got a feeling that
'shipping one to US for repair' would be considered "importation".

However, if it needs repair, ie, it ain't working, then it doesn't receive
ANYTHING. It is my understanding that it is NOT illegal to export such a
product from the US. Therefore, once it was repaired, it could be exported
legally.

Hey, wait a minute. Maybe this is a loophole! Import "defective or non-working"
scanners for "salvage" then "repair" them once they are in the US. The foreign
mfgs could "leave out" an easy to replace part, import them as scrap,
experimenter's specials, etc and viola, unblocked scanners for sale. Of course,
I suppose this might fall under the "easily modified" clause, but if it ain't
working when it gets here, it certainly isn't receiving cell phones, is it?

No charge, it's on the house,

Bill

Yes? So? Is this a "catch everyone's mistakes" forum?
If it is, we'll be looking into more of yours, that's fer sure.

> So why in the hell do you insist on getting so damn wound
> up over ONE post in a newsgroup that you don't happen
> to agree with?

Huh? You're fuller of shit than a Christmas Goose, pal.
It was, ummmmm, Mister "North Carolina editor for The Scanner Club"
Rich Wells who didn't agree with the truth of the LAW that I
laid on 'im.

Worse than that, the danged nincompoop came galloping out on
his trusty steed, Booger, and threw a sack of his own brand
of personal flames at me. So I hosed 'im. Big deal. He
went off to cry and snivel to his mommy and things were quieting
down until you had to ride in, pissing and moaning.

> So I didn't respond to the original post in a way that YOU
> thought I should--big, fat hairy ass deal.

It was a "big, fat hairy ass deal" when you construed something
damned weird out of what I said....which indicated you either
didn't bother to read it, or you were so damn stupid you couldn't
understand it. Either one is a "big, fat hairy ass deal", when
you come out frothing at the mouth with snot bubbles blowing
outa your dang schnoz and then dripping down over your lips.

> Do you think I really value your opinion

Press my "Give A Shit Meter" and see just what it registers to
the question of whether or not I care if you value my opinion.

Try some Pepto-Bismol for your upset gizzard.

> of your arrogance and the arrogance of pinheads like yourself

Well.....sheeeeeit, dude, if that's true, then I reckon you gotta
get your fat arse up offa that rat-infested couch and get your
pimply-faced, harelipped, bucktoothed self in gear and do something
about it, huh? I mean, geez, you feel so strongly about it and all.

But when you get up, be sure to take your head out before you break
wind and blow your dadburned brains out.

> who think they are God.

Me? Hoooo hooooo, hey wait a minute, Stinkbait, not me. I just
rared up a minute ago and broke wind and cleared out the shop, it
was so bad. Paint's a peeling off the walls..... And last time
I tried to jump into my britches with both legs at the same time,
I dern near broke a damn leg and sprung an ankle. Dang near
drowned last time I tried to walk on water. You must have mistook
me for your Auntie Glenn Quarnstrom. Now she's God or thinks it,
anyway.

> It's time someone took you down a few notches, buddy

Okay. Who? Mackey? Quarnstrom? Boe? You? Ha ha ha ha ha......
Sic 'em on me, man. Those popinjays done tried and blew it out
their grump stumps.... Send 'em again, if you want. Suck up to
'em. Love all over 'em. You'd be good for 'em.

> --after all, you were the one who chose to flame me in a public
> newsgroup

Flame YOU? You gotta be shittin me. Try reading what you wrote
to me first and what I said to you in return. Or can you read?

> just because you got pissed off

Sorry, I don't get pissed off. Obviously you do, though. But
take cheer. Being pissed off is a whole lot better than
being pissed ON.

> that I didn't learn to read

Well, THAT is just your own stupidity. I can't help that
and plumb don't care one way or the other except that twits
like you clutter up a perfectly good newsgroup when they can't
read.

> If you don't like what I have to say, Bill, then why don't
> you just shut the hell up?

I don't give a hang what you say. Say whatever you want.
The more pissed and frosted you get, the more I am going to
work you over until you smarten up. And lighten up.

> Who died and left you in charge of rec.radio.scanner?

Don't worry about it. You don't know 'im.

> Do you always get this hostile

Not until someone gets hostile at me. I figger if they can't
stand the heat then they need to get outa the kitchen.

> when someone answers a post in a way YOU don't approve of,

My "approval" comes ONLY at a price....and definitely not on these
newsgroups. I approve of things, usually on paper, and the fee
is hefty.... I don't lend my approval on the newsgroups.

> Bill? If so, I really feel sorry for you.

Oh cool. Send money, then. No wait a minute, I wouldn't
want any cash that went through your booger-picking fingers.
Gimme your credit card number instead. That will do.

> In fact, give me your address and I'll be glad to send you
> a case of one dozen freshly laundered crying towels to wipe
> away your tears.

Two questions: (1) Are you blind in one eye and can't see outa
the other? and (2) Are you stupid or just act that way? Look,
numbnuts, my address is in ALL my signature boxes. So send me
them hankies. I'll find a use for 'em.

> You think that just because you are a public figure that you
> can get away with all this bullshit in the newsgroups, Bill.

Ha ha ha ha ha, whooooooooooey, are you ever blowing snot bubbles
now. I am not a public figure. I am a private figure. Who told
you I was a public figure anyway?

> It's people like me that buy your damn books,

You did? No shit? When? From who?

> and sooner or later enough people will get tired of
> your arrogance and stop paying your salary, butthead.

That will be fine. Like you found out, this is America. Folks are
free to buy *your* books if they want. Somehow, I don't much think
they will.....but do feel invited to show me how its done and how
to "behave". I'll be closely watching your example.

> I don't give a damn how many books you've had published,

What difference does it make anyhow? I haven't brought up
anything you've done. So why are you throwing shit into the
ring that has nothing to do with anything? Maybe we should
talking about your line of work for a while. Is that what's
eating you.....you think I am getting all the attention?

Okay, okay, okay....hey, lighten up. We'll talk about you
for a while. Let's hear about what you do; who you work for;
where you came from; where you're at; and where you're going.
I sure didn't mean to get all wrapped up in me.

Let's start with your gene pool. What branch of the la cucaracha
family do you come from?

> I don't care how many magazine articles you've written,

I've never mentioned it. Why did you? Does it bother you?

> you still don't know it all,

You're right. I don't. Not all.

> Bill Cheek--you just think you do.

Ohhhhhh noooooooooooo I don't. I don't know which branch of the
la cucaracha family you sprang from. And I don't know where
you got that gap between your teeth, nor how you got that harelip.

> By the way, Bill, if it's so respectable to be a ham, why
> in the hell don't you have an amateur license?

Because I went professional instead.

Any more stupid questions? Or...are you smartening up yet?

It is amazing how in a world of smart fellers, you have to be
a fart smeller.....

Why?

Sure I do. If a matter is legit. Some are not....

> That's the problem.

Well....you've made an ASSumption.... not altogether true.

> I respected your views....but you do not respect anyone else's.

Sure I do. Especially when such views hold water, and are given
in a relatively straightforward, unemotional, uninflammatory
manner. But when gilded in flames and racing stripes, yeah,
you're right then. When a goody-two-shoe shill comes back
pretending to be cool and straight...when he's really on a troll,
well......yeah, I'll cut to the chase.

> You might be right most of the time......but all of the time ????

Well....that's kind of silly. However, I really do try to
maintain my silence when all I have is an opinion. OTOH,
when it's situated on terra firma, then it will take something
more than gas, hot air, and a fancy title to dislodge it.

> The other guys are dickheads....I know.....

Well....several of 'em are, yeah. Especially the shills. You
know...the ones who are put up to it. Not everyone. Not nearly
everyone. Just a few. Don't be deceived. A few squeaking wheels
can raise quite a cacaphony.......

> but they are not wrong EVERY time.

Well...what exactly are we talking about here..."every time"?
What does that mean? Where are you coming from? Here is where
I *am* coming from:

1. Bringing uncertified scanners into the USA is *against the law*
and is a relatively serious crime, if prosecuted. Jail time
and/or heavy fines are at stake.

2. Preamps are, in all but an expert's hands, worse for the scanning
shack than better.

To what other issues are you referring, pray tell?

If the first one doesn't make it through customs, what makes you think
that the second one would? If the second one doesn't make it, would
they ship a *third* one?

Despite the probability that most of them get through customs, the
fact remains that they *are* subject to seizure. If you order one and
end up losing your scanner to Customs and the seller won't refund the
purchase price, then you are S.O.L. and have no one to blame but
yourself. Who would you complain to? Your Congressman? Maybe
you could sue the U.S. Customs Service for doing their job. Hehehehe!

>someone parades in front of them boasting of their law-breaking ability! I
>seriously doubt this is "railroading".

whose law? the law that makes it possible for
the cell phone makers to make money off of...

special interests being granted protection
from listening...so they can make money and then
pay off congress and senate with big contributions
to the war chests of each....

Money buys congress. Money comes back to congress.

people get arrested for "LISTENING?" is this not
a victimless crime...?

Who was hurt? FM is FM. Go digital and that
problem is solved. All phones now are digital. so
where is the threat now that conversations will be
listened in on....?

The law now is anachronistic...it does not flow.
It's applicable to a few. Those that did not swith
over to digital.

People being arrested for a law that is no longer
a threat to the makers of that equipment.

How do you justify this?

Congress makes laws to come around and pay them back.
That is why people run for Congress: they know they will
get rich off of these stupid laws that they enact. This
country is bought and paid for by a few conglomerates who
get what they want from the Congress.

And you and me go to jail or get arrested because they
are allowed to tell Congress what to do to protect their
market share.

bill conduit

This may sound like a weird question..but I have been scanning
the 851.0125-940.9875 trunking band. I have found a few voice
channels and several DATA channels. The problem is that
I dont have all the voice channels #'s to program in. I just programmed
in a few of the channels I heard voice on and the few data channels
that I found.

The scanner will scan and goes into trunk mode.....showing id #'s on the
display.

My question is there a way to find the VOICE channels...or do I need to even
know the
rest of the voice channel #'s if I got the data channel (will it find the
voice channel on it's
own without me entering them into memory?)

Thank...I just got this TrunkTracker from Radio Shack...model Pro-2050 (yes
the new one)!

Thanks!

I know a very reputable mail order dealer, it's called Grove Enterprises.
I have bought half a dozen radios, numerous accessories, and a ton of books
from them over the years, and always got the items as promised. Once, when
I ordered a PRO-43 on a Monday, they said it should get here on Wednesday.
They called me back on Monday afternoon and said that the radio missed the
UPS truck, and they would send it second day air at no extra cost. I got
the radio on Wednesday, a day ahead of schedule.

Bob Grove is probably the most respected man in scanner history, next to
Gene Hughes.

Did you see the hearings? I think not. If you did, then you would have seen that Mr. Grove tried his best to put scannists in the best light, and never offered any illegal mods. At the time, there was no rules about modifying already existing scanners.

What Congress did to Bob Grove was a disgrace, and a farce.

Moving forward with Outlook Express doesn't mean leaving your old address book information behind. You can import your personal address books from numerous popular e-mail programs including Microsoft Exchange, Eudora Light and Eudora Pro, Netscape Communicator, Microsoft Internet Mail for Windows 3.1, and any program that exports comma-separated values (CSV) text files, such as Microsoft Outlook.

You can also use your Address Book files with either Microsoft Exchange or any other program that imports files in CSV format.

Send and receive Business Cards

Business Cards are the new way to send contact information electronically. When you create a Business Card in the Address Book, your contact information is stored in vCard format, so it can be exchanged between different programs (such as e-mail, address books, and personal planners), and between different digital devices (such as desktop computers, laptops or portable computers, personal digital assistants, and telephony equipment).

Got a dead deaf 16 channel Bearcat BC140 scanner alive again. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. No 22V, no tuning of the local osc and front end, no reception. What I did was compare voltages to a second working BC140 I have. Now I can hear the police doing their duty.

>
>C'mon, don't be afraid. Lots of people are coming out of
>the closet these days. It's the "in thing" to do.
>
>Bill Cheek
>Official Registered Monitor BC2006

Our story so far: KUT7BH politely asks Mr. Cheek a question. Mr. Cheek responds with sarcasm and invective, which, in turn, elicits a similar response from KUT7BH. Mr. Cheek, having been successful in trolling another poor schnook into a pissing match, gleefully unloads both barrels on the hapless KUT7BH, flaming him at great length.

But KUT7BH, not being a slow learner, realizes he's been had, and apologizes politely to Mr. Cheek, and even adds a seasonal greeting.

Mr. Cheek responds with more sarcastic untruths and uninspired sophomoric invective, evidently hoping to draw KUT7BH back into the fray for another round.

What will happen next? Nobody knows.

Stay tuned for the next episode of the Mr. Bill FlameFest, coming soon to a newsgroup near you.

I am a reporter for a New York City newspaper and have noticed a recent reliance on Video Display Terminals in suqad cars, ambulances and firetrucks that paralell the "drop in crime" the mayor is taking credit for.
I believe the public safety radios are being used for public announcements like officers needing assistance rather than broadcasts about more serious crimes.
I also noticed a reliance on cell phones at crime scenes that obviate the need for publically accessible voice radio communications.
The VDT's are in all the ambulances and fire trucks and most of the police cars I see at crime scenes especially in the mobile field command units.
The information is broadcast as encripted data. Without a terminal all you can receive is what sounds like jamming.
Last night I responded to a fire in Brooklyn when another fire erupted in The Bronx. We were monitoring the Bronx fire from the office in Manhattan but nothing informative was being aired. I went to the command truck and the fire fighter who called the data up onto a screen. Nothing was on the normal fire freques, the trunk system, or the usual police freques.
Any ideas?

Hi all,

Just curious....in reference to the "alpha tags" feature of the Trunk Tracker base,

1.) Do alpha tags ONLY show on the computer screen or do they display on the radio's display LCD??

2.) Will the tags show all the time or just when radio is linked to computer?

3.) How many characters alpha are displayed?

4.) How does this radio compare in terms of senistivity, intermod rejection, etc??

5.) Any bugs or complaints with this radio??

6.) Recommend it to the serious listener or not???

Thanks,
Ted (cc my e-mail ok?)

Source record: 176733

Hi all,

I've got a BC-8500 that is getting piss-poor reception on UHF. The signal appears weak and the audio is slightly distorted and scratchy.

I suspect this may have had something to do with the discontinuation of the set.

Either way, if I can fix it or have it fixed, I'd rather that than pay out for a new BC9000 or trunk tracker.

Thanks,
Ted (cc my e-mail too)

Can anyone advise me as to the available scanner related
periodicals???

If you're aware of any, please email their name and address (tel
no if avail) to me at
dick@brennick.com...

Thanks...

Sure. Replace the clock resonator with a higher frequency
device.

You do know, don't you, that speed isn't everything?

Ferget that'n.

> Besides catching the audio of T.V. I'd like to catch the HAM 220 Mhz band.

You ain't gonna catch either of those, either. But here is
a sampling of what is possible.......

Tape Recorder Jack
Automatic Tape Recorder Switch (beats VOX!)
Extended Delay
Tone Decoder-Rejector Countermeasure
CTCSS mods
S-Meter
Scanner-to-Shortwave Interface
Carrier-On-Indicator
Audio Improvements
Beep volume or disable
Squelch Improvements
Remote Controller
Baseband audio output for data decoding
Event or "hit" Counter
Shielding of plastic cases
Improved Adjacent Channel Rejection
Speed up of SCAN & SEARCH modes
Interfacing to a computer
Extended Memory to 12,800-channels & up
Cellular restoration

LA County Lifeguards still use the old 37 Meg freqs although
they were merged with the LA County Fire Dept (470 MHz system)
a few years ago. The Lifeguard freqs are:

37.20 (All beaches)
37.06 (Avalon/Catalina Island and Hermosa Beach, South County)
37.08 (Zuma Beach - Malibu, North County)
37.36 (Santa Monica - Central County)

Good luck catching the skip in Ohio! You may have to wait
until next summer, though...

Rich, N6CIZ, in Los Angeles.

Why is there SOOOO..... much interest in it? I have an idea you moron,
why don't you ask the NSA (http://www.nsa.gov)? They have a budget
(black budget that is) bigger than the CIA's and it is for monitoring
PHONE CALLS!!! I will direct you to read the Puzzle Palace by James
Bamford available at http://www.amazon.com

Billions of dollars are spent by the NSA for satellites to be put into
orbit to "sniff" phone calls made over microwave systems in other
countries, as well as HUGE receiving dishes to suck phone calls off of
various satcoms that carry voice and data traffic around the world. This
is the just tip of the iceberg as to the monitoring of ALL forms of
communication that the NSA does on a dailey basis! Get a life? Maybe you
should drop an e-mail to those boys at the NSA and tell them to get a
life! You really don't need to though, since there "router sniffer
software" already has picked up this e-mail for a " intel-review" by
some of the "busy-bodies" at the NSA.

Get a clue you board certified moron!!!

2203. Cordless phone TESTMODE- Yes, they have one.

Newsgroup: rec.radio.scanner
Date: 1997-12-20 00:00:00 UTC
From: lwa@pangea.ca
Message-ID: <67g55emus1@pumpkin.pangea.ca>
Source record: 176744

For the interested person:

All cordless phones have a testmode. I test all models/brands and here is some common codes to try on your phones:

UNIDEN (Low band and 900 Mhz)

Handset:
1. Disconnect the battery pack.
2. Hold down * and # keys.
3. Connect the battery pack and listen for some beeps.
4. Press numbers on the keypad to select receive, receive+transmit, tx, rx.

6 = receive
2 = transmit unmuted audio
1 = transmit muted audio
7,8,9 = ringer tests
0 = transmit and receive

Press the channel button and you can switch channels - hey now ya got a handheld scanner.

5. To exit press the talk button.

Base:
1. Disconnect the adaptor from the back of the base.
2. Hold down PAGE.
3. Hook the power back up and press page to transmit on the channels.
4. To exit you have to unplug and plug the power back in.

Note:
This works on the "secure" 900 MHz digital/spread spectrum phones! The people who were saying nothing is secure is correct.. Haha!
So if your enemy/friend bought a 100$ digital phone go get one and use it to monitor them or whatever.

I have more codes but uniden's seem to be popular so someone try these out and tell me whatya think of the codes.

Have a nice xmas peoples.

William

There has been quite a bit of discussion about it on the Trunkcom mailing list lately. Evidently, Uniden is preparing to introduce a scanner that will track GE systems midyear.

I'm merely repeating what I read...

Good Luck! I've been a Uniden Commercial Two-way dealer since the early eighties, and we go through the same BS that everybody else does. And a lot of us have gradually moved our business to other vendors because of the piss-poor service. Unfortunately, Uniden is such a large corporation that they couldn't care less about our complaints.

All of the phones on the 1.9 Ghz band are 1W-PEP. The only 3 watt
phones are the Full Size mobile/Bag phones used on 860 Mhz. Most if

not all of those are Analog.

My Microwave oven operates on 2450 Mhz 545 Watts.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

- - - - - ARIZONA SCANNER LISTENERS - - - - -

Southwest Frequency Directory's brand new 4th Edition (1998-1999 edition) is now available! The new scanner frequency and information resource is now in Phoenix and Tucson stores. This book is made in Arizona by local scanner "experts", for Arizona. SWFD is NOT just another national database printout...

SWFD-4 includes frequencies, radio codes, fire station resources, general public safety agency information, terminology, abbreviations, and more for Police, Fire, and Medical services. In addition, frequencies for Aircraft, Amateur Radio, Media, Hotels & Resorts, Schools, Malls, Security Companies, Utilities, and local and federal government are also included. SWFD-4 is over 300 pages, in an easy to use 8 1/2" by 5 1/2" size, with a coil bind, NOT a spiral bind like other books. By using only COIL binds, SWFD allows its users to flip pages all the way over and keep the book open to one page only, with only that page showing. This makes looking things up and programming your scanner much easier. New this edition is added line, borders, page breaks, and cardstock section seperators to make finding what you are looking for quick and easy. Also included in the 4th Edition of the Southwest Frequency Directory is talkgroup numbers for Motorola TRUNKED Radio Systems throughout the Phoenix Valley, for use with Uniden's TRUNKTRACKER scanners. With the release of the TrunkTracker scanner, a quality frequency directory like SWFD has never been more important.

Although the book sells for between $25 and $30 in stores, you can order yours directly from Southwest Frequency Directory today for $25 for the first copy, and $20 for each additional, and this price includes shipping.

Don't miss out! SWFD-4 promises to be the best and most up-to-date frequency directory there is for Arizona!

Send a check or money order to:
Southwest Frequency Directory
5816 N. Camino Arturo
Tucson, AZ 85718-2904

Please feel free to e-mail questions to SWFD's editor at DanR@azstarnet.com

Thanks,

Dan Rollman / KC7ANQ

> slow as a snail. Anyone?

And it will always be as slow as a slug. It can
be speeded up (a little) by altering the value of
R50 (39k). Go lower to raise the speed, but go too
low and you're likely to blow the CPU. About 10k
is as low as I'd go, but I'd start with 22k or 15k
and let it go at that if all is well.

Not true!! This is a resonant frequency for heating water. Nobody's sure why, but it causes the water content of food to heat much faster than other frequencies. That's why microwave ovens use it.

> Use some friggin' common sense! What would you expect the congress to do when
> someone parades in front of them boasting of their law-breaking ability! I
> seriously doubt this is "railroading".
>

Maybe some facts will help...
What Bob Grove told the committee was *not* against the law; the law
forbad manufacturing and/or importing scanners that easily would tune to
the cell frequencies. The law was/is quite specific as to what
constituted being easily converted to do so, and each scanner design was
approved by the FCC as far as meeting the law was concerned. There was,
at the time, nothing illegal with modifying scanners to tune to the cell
frequencies. It wasn't until after the committee meetings that Congress
told the FCC to tighten up on the regs, at which point the FCC decided to
define the commercial modification of scanners to receive cell
frequencies as "manufacturing."
BTW, what started all of the paranoia about people being able to listen
to cell calls was most definitely *NOT* a concern for the private
citizen's rights. Instead, it was a direct outgrowth of several
congresscritters being overheard, while talking on cell phones, and
planning or bragging about illegal or unethical actions on their part.
Believing that our Congress can or would act that quickly on our behalf
displays an incredible naivete.

>N> with very little about the radio. Any help would be appreciated. Either pos
>N> to this group or e-mail me or both.

The R7100 is easily unblocked by removing a single unmarked jumper
(across two pads), the pads directly above A6 on the logic board.
Above meaning closest to the edge of the board. That's it. No reset,
software or anything else needed.

You should have the service manual or at least a cartoon of the logic
board before starting this.

Please no questions on unblocking ICOM receivers.

I, too, have seen the Uniden Company have poor service. Not to me, but to a personal friend of mine. He called on their 800 number and after several days of trying to get through, he was put on hold for 15 minutes with no one coming back to him. Although it did not cost him money, the inconvience was terrible. I have personally written an email to Uniden via the Internet and told them of this problem. We will see if this did any good. Maybe if more people online would send a "concerned" email to them, maybe they can get whatever problem straightened out.

2241. ICOM R8500s FS NIB $1625, R10 $450

Newsgroup: rec.radio.scanner
Date: 1997-12-20 00:00:00 UTC
From: Steve@swssec.com
Message-ID: <349f3b85.9589849@news2.ibm.net>
Source record: 176822

Hello list entities,

For a while we are offering *NEW* ICOM R8500 receivers, in sealed boxes with all accessories and a TWO year warranty, for $1625 plus UPS. Further discount on two or more units. Current production, no strings attached, just passing low prices from huge volume to all.

Other dealers offer only the factory one year warranty. We service in house. Only condition for warranty is no mods performed and no one else attempts service.

Cellular unblocked to authorized users, unfortunately blocked only to the rest of us without titles of nobility.

Our website has photos of the R8500 being used in several surveillance listening posts. Go to the What's New section, then hit the photo gallery "A Day in the Life".

Similar deal on R10's. Price $450 + UPS.

Government or authorized users email or call for the lowest price on R9000 in eleven years. No private sales on R9000.

We can take your check over the phone for the extra $35 the bank charges us, or credit cards at no premium starting in January. Orders prepaid at these prices except government customers with open account already.

We may accept trades of other ICOM receivers (only) towards the above. Email to inquire. To be honest though you will get a better price selling to others than we can offer on a trade.

We are ICOM dealer #6307, selling ICOM back when the company was called Inoue Communications, and one of the few facilities who services in house. We sell and service commercial ICOM equipment only, no amateur, no other brand. We've sold something like a hundred receivers on these newsgroups, so plenty of history on us if inquiring minds need to know.

No it is not too good to be true.

Regards to all ..... Steve

True, I have stated the above.

I will NOT post what you are asking for regarding my Master's degree because I asked for proof of Bill Cheek's Master's Degree in Engineering over a year ago. He still to date has NOT responded, but had the nerve to ask for MINE after NOT responding about HIS. If you will hold Bill Cheek to the same that you want from me I will respond AFTER Bill responds.

If you don't like it then sorry, that is the only way it will be.

Regarding the writing for ARRL & other publications, I will supply that with no reservations. I am about 100 e-mails behind right now so it will be a few days.

2249. Help...Regency T16K scanner

Newsgroup: rec.radio.scanner
Date: 1997-12-21 00:00:00 UTC
From: Jeff Schmeichel <kb9byp@execpc.com>
Message-ID: <67kakk$a01@newsops.execpc.com>
Source record: 176580

Hello:

I picked up an old Regency T16K scanner and it has no manual. I think I got it figured out as far as entering frequency's. But I need to know how to skip channels and how to turn on a scan delay if it can do that. Also, is regency still in business and does anyone have a phone number for them.

Thanks;
Jeff

I'm looking for any opinions on the BCT7.
How loud is this scanner?
Would I need a external speaker?
How would this scanner be programmed if there is no keypad on it?
Is this the best uniden mobile model?

Also, is there any RAT Shack mobiles that pick up cb's?
Please give recommendations of other companies mobiles if any do
exist.
thanks

I figured you would try to evade the issue like that. Bill Cheek is
your
little hero, sorta your knight in shinning armour. You can't stand to
see that it may be truth that he is NOT what you want him to be. How
sad. You hold me to a standard that you can not hold Bill Cheek to.

The offer still stands, if Bill will then I will. If not I won't.

I have the following radios for sale or trade. I would be interested in a current P200 or better PC, and/or 20 Inch monitor in some sort of package, cash or combo deal.

1) Icom R7000 Full coverage (25-1000, 1025-2000 MHz, no other gaps...), with IR Remote, TV-R700 TV adaptor, 12VDC kit, and discriminator output. Also includes a Grove SDU100 Spectrum Display Unit with matching 7 inch monitor. Includes service manual.

2) Icom R71 HF receiver with filters and 12VDC kit.

3) AOR AR8000 handheld receiver, full coverage, no gaps, ("DC-Daylight") with Scout Mod.

4) PRO-2006/OS456 computer controlled scanner. 25-520, 760-1300 coverage with no gaps. Includes serial cable and manuals. Also includes an AST 386-20 laptop, perfect for Probe, ScanStar or other DOS or Win 3.x applications (Sorry, applications not included)

If interested, contact via E-Mail.

Jerry -

I'm not sure how YOUR antenna works but I have had three different rooftop scanner antennas, two Radio Shack and one A.S. They were all good workers, but although none were *supposed* to be directional, I found that I could zero in on distant SFPD only if I sat on the roof with my scanner and turned the antennas until the signal was best, then lock them in that position. So my answer to you is "maybe yes, maybe no." Try it.

2275. R/S Scanner Manuals 'banned'

Newsgroup: rec.radio.scanner
Date: 1997-12-21 00:00:00 UTC
From: wcarc@itcanada.com
Message-ID: <3307f21f.1064556@news.itcanada.com>
Source record: 176606

Okay, here's the scoop (from R/S in Fort Worth)
Service Manuals that contain information regarding how to modify the scanner to do ANYTHING illegal, such as Cell's, etc..., as well as service manuals for scanners that can, and could be modified for above are not being offered for sale to the public.
They will still sell you the service manuals for most scanners on the market now.
Reasoning? Someone from the FCC had said that they wished that scanner manufacturers would stop releasing information to the public as to how to modify scanners - I.E. stop selling service manuals.
Note - some stores will not sell you ANY manuals, in this case, you would have to go to another store. (or order from R/S Unlimited)
This came from R/S Head office, so it is safe to assume (not label) this as true.

Hope this clears up some of the clouds!
73, Mike VE3XLS

You would have to jam over 1,000 channels. If you wanted 10mW on each
you would have to put out 10W (1,000 x 10mW). if you used a swept or
steped transmitter it would be on each channel for only 1/1,000 of the
time. I think that you would be unpopular with more than just your
friend.

Naaah. He just has to jam the _control_ channels. And, for that matter, only the _downlink_ (to-the-handset) part of the pair.

So depending on the system type he might have to go as high as 50, but more likely it'll only be ten or so.

I would look for the cell phone transmitting and then jam the
corresponding receive frequency.

There, now I've said how the pros do it.

2298. Advice needed, please (Meteor Scatter) (UK)

Newsgroup: rec.radio.scanner
Date: 1997-12-21 00:00:00 UTC
From: Stephen Tonkin <sft@nospam.demon.co.uk>
Message-ID: <Xv92fQAjHWn0EwRa@aegis1.demon.co.uk>
Source record: 176645
Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner

I am almost entirely ignorant of scanners, so will not be offended if told to go away and read a FAQ (point me to the FAQ!) before asking these questions, but here we go anyway.

I wish to set up kit to detect meteors by forward scatter of radio signals.

I understand that this should be possible to achieve with a scanner plus various (optional, depending on how fancy I wish to get) add-ons.

The basic principle is to get radio-bounces off an over-the-horizon transmitter and either detect them audibly or, via an ADC and serial port, with the pooter. The preferred frequency range is 40 - 80 MHz. Obvious possible transmitters are east-European FM radio stations and VHF TV station audio.

I am told (if I have understood what I have been told correctly) that AM signals will give me a stronger reading than FM, owing to the bandwidth of the FM signal, and that a CW (what *does* CW stand for?) or SSB filter may also enhance it.

Firstly, have I correctly understood what I have been told?

Secondly, is there a suitable scanner for this purpose and, if so, what?

Thirdly, can anyone suggest another route to achieving my aim?

Could responses please recognise that my level of ignorance is such that I'm not yet aware of just how ignorant I am!

TIA

For the interested person:

All cordless phones have a testmode. I test all models/brands and here is some common codes to try on your phones:

UNIDEN (Low band and 900 Mhz)

Handset:
1. Disconnect the battery pack.
2. Hold down * and # keys.
3. Connect the battery pack and listen for some beeps.
4. Press numbers on the keypad to select receive, receive+transmit, tx, rx.

6 = receive
2 = transmit unmuted audio
1 = transmit muted audio
7,8,9 = ringer tests
0 = transmit and receive

Press the channel button and you can switch channels - hey now ya got a handheld scanner.

5. To exit press the talk button.

Base:
1. Disconnect the adaptor from the back of the base.
2. Hold down PAGE.
3. Hook the power back up and press page to transmit on the channels.
4. To exit you have to unplug and plug the power back in.

Note:
This works on the "secure" 900 MHz digital/spread spectrum phones! The people who were saying nothing is secure is correct.. Haha!
So if your enemy/friend bought a 100$ digital phone go get one and use it to monitor them or whatever.

I have more codes but uniden's seem to be popular so someone try these out and tell me what ya think of the codes.

Have a nice xmas peoples.

William
lwa@pangea.ca

Thank you very much for this info. I also have simmilar info, only mine is to put a Cellular Phone into test mode, you can find this info at.....

http://radiophone.dhp.com/index.html

....this is a very good cellular phone web site, and has test modes for lots of phones.

You can also visit my site at...

Hello,
I am trying to use my BC-9000 to recieve MDT Transmissions in my area. In order to do this, I need to have the baseband audio from my Uniden 9000. Does anyone know what IC, pin and where in the radio I can find the IC.
Also can some one recommend a interface to use between the radio and the computer. I would immagine something that works for POCSAG would be fine. I know there are some commercialy made devices, but chances are I would need to buld one. If any one has any info in this area I would really appreciate it. Thanks in advance.

>
>Uniden makes the PRO-90 (Rad Shack's version of the TrunkTracker) for Radio Shack. The PRO-90 is essentially the same scanner as the BC235 (Uniden's TrunkTracker), but the BC235 comes with an extra recharable battery pack. Unless Rad Shack has a sale, the current price of the PRO-90 is $299 (I believe Grove Enterprises sells it for $269); the BC235 can usually be had for $239-$249 from dealers like Grove and Copper Electronics.

>find the IC...

I published in my 6/96 MT column where you can get
BC9000XLT baseband audio, though I use it for
connection to a CD1 tone reader:

"....On the top of the main BC9000XLT board,
find the test point labeled TP3, located about 3 inches
behind the AUX jack. You can choose to solder a wire to TP3
from either the top or bottom of the printed circuit board,
but it's easier to solder it to the bottom because
the bottom solder pad is larger...."

As pointed out by another experimenter, you can also connect
to a pin where the optional CTCSS board installs.

NO, Bill it is NOT illegal to bring "uncertified" scanners
into the USA. (You FOOL, there is no such thing as "certified".

It is, however, illegal to "import" non-FCC type accepted receivers
into the US for intented sale in the US.

It is NOT illegal to purchase a non-FCC type accepted receiver
overseas & bring it back WITH YOU to the US.

Hi Bill -

You apparently mis-understood my post.

I never stated that the ARRL was a body that made or enforced
law. They will, however, give you the intrepretation of certain
laws according to the ARRL Legal Counsel.

I never stated it was legal to import a scanner that was NOT type
accepted. Such an act is NOT legal.

However, it IS legal to go overseas & purchase a receiver YOURSELF
& bring it back to the US with you. This has OFTEN been done. The
ARRL legal counsel can give the specifics if you want.

Look it up & check it out, you'll learn something!

Bill Funk wrote:
> Sorry,John, the ARRL does not make, enforce, or intrepret law.

The below is correct. However, it is NOT considered importing when
you travel overseas & purchase it yourself & bring it back with YOU into
the US.

Look it up!

While not techincally a scanner, this is a radio based item.

While on vacation I spotted an radio based atomic clock. Meaning it
receives the radio sent time signal similar to the Oregon Scientific
and some others.

The unit was made by Emerson Research Model #CKA1000

This unit was being sold at a national discount chain for about $40.

Any one have one? Comments compared to others like the OS units?

I couldn't find any web pages in the Alta Vista search I did, any one
know of this firm contact info web and/or fax only.

Thanks in advance.

Good pont. I have a scanner from 1984, that tells you in the instructions how to listen to cell calls, by mentioning the proper offset, etc. Imagine that! A scanner made by a US company, Regency, telling you about hearing cell calls in the manual.

Just hide the battery. That would be much easier.

More like having the few fries which someone else is short.

>...a few sandwiches short of a picnic....

Short of everything for a picnic but the basket.

2334. light mod for bc235xlt

Newsgroup: rec.radio.scanner
Date: 1997-12-21 00:00:00 UTC
From: Sly Kapchinski <n5gqb@txcyber.com>
Message-ID: <349CB1FA.50C8@txcyber.com>
Source record: 176705

TO ALL--

LIGHT MOD FOR THE BEARCAT 235XLT TRUNKTRACKER!!

From Sly Kapchinski, N5GQB

This mod will enable you to turn on your backlight via a separate switch and to leave it on as long as you desire. No longer do you have to keep hitting the light button all the time to see who's talking while at night.

Before I begin I must say that I have had this mod on my radio for several months now with no ill effect on the radio. I leave the light on all night while scanning with the radio on the night stand.

As for the extra battery drain, it is not as bad as you might think. I did some milliamperage checks on the radio and here's what I found.

The radio pulls between 70 - 85 MA while on, squelched and no signal present. The variance depends on if your trunking or not, scanning or manual, the frequency band your on, etc. With the light on, the radio pulls an additional 20 MA (approx). So you can see, by leaving the light on all the time will not severely cut back on battery life. My personal experience you will loose about 2 hours of battery life if left on continously. However if you are able to plug the scanner in, it is probably best, especially if you leave it on at night while you sleep.

There is a couple of small drawbacks to the mod.

#1 The backlight will still continue to shine even after the low battery indicator has shut the radio off. If left this way the batteries will continue discharge to nothing. This is not good for the batteries.

However, this will not happen (of course) if left on the charger.

Please note though, the light "DOES" go off when the scanner
is turned off by the knob.
#2 Depending upon your preference and the size/type of switch you
choose to use, it may be necessary to drill a hole in the case.
Other things you'll want to know
#1 The regular light button will function as normal.As long as
your added switch is not turned on.
#2 The keypad lockout button functions as normal regardless of
added switch position.
#3 This mod will more than likely void your warranty. *However see
"my idea".
#4 Your scanner will not lose any of its memory. Unless you leave
it taken apart, day in - day out.
DISCLAIMER
I assume absolutely no responsibility if you blotch the job.
This mod will more than likely void your warranty. (see my idea!)
You will be required to solder to a surface mount transistor. If you do
not have experience in messing with SMD's or the necessary equipment
then I suggest you do not proceed or let some one who has the experience
do it for you.
I am in no way related to, tied to, or work for Uniden, any scanner
retailer, wholesaler or repair shop. I am merely an individual with a
somewhat electronic background and an interest in scanning like
yourself. Like mentioned before. I have done the mod myself and it works
just fine.
Lastly, if for some reason your scanner has a different layout of the
identifying components than as to what I describe below then don't
proceed. Guessing will only get you in trouble.
Direct any comments/questions to n5gqb@txcyber.com
Supplies you'll need
#1 A low wattage soldering iron with a tiny tip. You will be

soldering to surface mount devices!

#2 Very small gauge wire, about a foot and cut in two pieces. I would recommend 26 gauge or smaller and stranded. Once again you'll be soldering to smd's! You cannot put any undue stress on these components!I would not use magnet wire.

#3 Lastly you'll need to locate a s.p.s.t. switch (not a momentary either). Your choice of switch depends on the way you want to mount it.

I recommend two mounting situations.

#3A) Involves drilling a hole in the top of the radio just behind the earphone jack. I highly suggest you take the radio apart so you can see what you're doing before drilling and to see if you can fit a switch into this small void area. Such as a micro-mini toggle switch.

Also note there is a metal plate underneath the plastic top that you'll need to drill through. This will be evident once the radio is apart.

You'll probably need to shop around some specialty electronic stores.I don't think radio shack has anything small enough. However confirm for yourself.

I would recommend you take the radio apart first and look at your size options and/or mounting locations to give yourself an idea of what you need.

"MY IDEA"

#3B) The second switch option involves no drilling, in fact if you go this way you can remove the whole mod with no evidence!

You will need to locate a small enough switch to fit inside the battery pack area. I used a switch that is about half the size of a fingernail and about an 1/8 inch thick, it resembles a single "dip" switch that you might would find mounted on a circuit board. It has a tab on it for the switch so I can use my finger

nail to flip it. It fits nicely in the lower right corner of the battery pack section (yes the battery and cover is installed and I can swap out packs with out interfering with the switch as well). I mounted the switch to the case with some strong double stick foam tape.

Remember you don't have to do exactly as I did just use some "enginooity".

I obtained the switch I used from "Ace Electronics" in Houston.

How this mod works

The switch will be hooked up to a switching transistor inside the radio that is normally responsible for acting like an on/off switch for current to the backlight. You will in effect be bypassing the current around this transistor, like a jumper. This transistor normally receives a timed signal from the cpu to allow current to flow to energize the backlight. You will not be hooking up to the cpu but to the transistor. As stated before this mod has no ill effect on the radio. Unless of course you foul up.

Lets get started

1. Start by removing the battery cover, battery pack, antenna, volume and squelch knobs (they pull off), remove the round nut for the bnc connector (I use a small pair of needle nose to grip the slots).

2. Remove the 4 black screws holding the back cover on and remove back cover. Don't worry about removing the screws for the belt clip.

3. Remove the top cover as well.

4. With the radio pointing up and the back facing you, remove this first circuit board by carefully! grabbing it at the top and bottom and carefully! rocking it top to bottom. It is held in place by a multi pin connector on the bottom right side. The pins are held in place by resistance, do not worry about having to release some tab or anything to get this board off. However, do not use anything to

pry with and do not use excessive force. This is the only thing holding this board down. Once removed set this board to the side.

5. Remove the next board by removing the 2 silver screws at bottom, The 2 silver screws in the center of the metal plate shield and the 3 silver screws holding the metal shield itself. This board should now come out.

6. Release the two tabs holding the metal shield on, they are on either side of the lcd display.

7. Now turn this circuit board to the left. The component side should be facing you and the lcd display (on the underside) should be facing to the left.

8. Locate the 2nd largest chip on the board, it is labeled IC202, mine has the numbers D7225GB on it.

Now, about a 1/4 inch from the "top right" corner of this chip (going to the right) you will see a 3 legged black component. This is the transistor you need to hook up to.

It is the only 3 legged component on this whole left side of the board.

Mine has the numbers 64 and 23 on it. This transistor should be easy to identify as this board is not very crowded. There are some smaller resistors and capacitors around it.

As for another desription as to its location, its half way between IC202 's top right corner and the screw hole in the circuit board.

Remember to have the circuit board facing in the direction as described in step 7!

8. With the board still facing the same way you will need to solder one wire to the top left leg of the transistor, then solder the other piece to the single bottom leg.

REMEMBER DO NOT LEAVE THE IRON ON THE COMPONENT MORE THAN A SECOND OR YOU'LL WIND UP BURNING IT UP OR MESSING UP THE

SOLDERING PAD OR TRACE! BELIEVE ME ITS VERY EASY TO DO!

9. Now route your 2 wires to your switch! Be sure to leave plenty of slack and be real easy about this. Do not pull or tug on at all where its been soldered to the transistor!

BE SURE TO DOUBLE CHECK THE SOLDER JOB WITH A MAGNIFYING GLASS. Make sure its secure, no cold joints and no bridges exist.

10. Put your radio back together and confirm operation and your in business!!

Direct any questions/comments to n5gqb@txcyber.com

There were at least three versions. There were two versions of the
modifiable ones, the difference being the power lead(s) and at least
one later unmodifiable version. I believe the latter have a B suffix
catalogue number.

Try the old stand by, a spark gap transmitter. You take a door bell or buzzer that works on dc and hook it in series with the low voltage side of a cars ignition coil (the two screw terminals on the older style with 2 terminals and a high voltage connection. Watch out it puts out some very bad interference and about 15, 000 volts at the high voltage side.

>
>Is that similar to the Pro-64 (same model number) that lists for $299.99
>(always listed for that) and has been on sale for $199.99?

Nope. this one is much better. Not to be confused with the fact that they
have the same model number, this one has 400 channels, and the Pro-64 only
has 400 channels.

The Pro-64, very similar to the Pro-64, has a modification that allows you
to adjust the volume with a potentiometer... where the Pro-64 only has a
volume control.

Devices specifically designed to interefere with legal use of the
wireless spectrum are generally illegal, and their use carries serious
penalties in most countries.

In otherwords, this is a bad idea. In the absence of knowledge of the
channels involved, you would have to radiate a few milliwatts on each
of the some 125 channels possible. No longer just a few milliwatts
unless you take out the base channel.

Emilio,

Radio Shack has a new Anal Plug to BNC adapter. It's meant to use your skeletal structure as an undercover antenna. You can use it while interrupting those sting operations and it makes eaves dropping on Cordless calls a piece of cake since you can drop your scanner down your shorts and walk down the street without attracting too much attention. As an added buns, I hear that the higher your skull density, the better reception you get!

Tell your freind to reset the CPU. The process should be in the owners manual.
In my manual it says to hold down the 2 and 9 buttons while turning on the scanner.

wrote:

>Are there any modifications for this scanner?Please e-mail or post.Thank
>you for your time and consideration.gpgt@ameritech.net

No modifications are necessary to the scanner body to interface it to
a PC; all you need is a connecting cable. Radio Shack does not sell
the cable by itself but includes it in a "computer software &
interface'" package for $129.99 (#11996428). Instructions for
building the cable are in the help files of the shareware software
"Radio Manager," downloadable at :

http://www.interplaza.com/bensware/rspro64.htm

Apparently, computer control of the Pro-64 is limited to uploading
frequencies to the scanner, at least with the Radio Manager software.
This, in itself, is great and will save a lot of time and wear on the
keypad but the scanner is also loaded with many additional features
right out of the box.

Radio Shack has done little in the way of advertising the PC
interfacing capabilities and the Owner's Manual only casually
mentions it. Hopefully, some software and hardware hacks
will be developed to increase these capabilities of what seems
to be a great little handheld.

Check out my PROgramit WEB page at http://www.qsl.net/ka2pyj. Programit is a very simple and inexpensive interface that you can build for almost any scanner. It does just what you described and can import freq databases from Percon, Probe, Scanware and Grove. Also join the list at majordomo@qth.net with subscribe programit in the body of the message. Email me with any questions.

I can tell you a little about what you want to know. Those keyless entry
car alarm, etc, transmitters only put out real small power for a very
short time. I have several freq. counters all which sens activity, but
don't register a signal. Ive adjusted their gate times to the lowest
possible setting too. I believe I remember reading from the back of a
keyless entry like 202 or 203mhz, which doesnt make sense since that
falls in the broadcast TV spectrum.

BTW, there's nothing wrong with asking any questions. Knowledge is
not and should never be illegal. Knowing or talking about how to steal
a car is not illegal. Planning or stealing a car is. I wish more peopl
understood the distinction.

Hope this helps. (Let me know cause I can't measure it!)

I have the cheapo Radio Shack magnetic mount whip and have been pretty impressed with what it can do. The Diamond 77CA duckie is still the best for the flex use.

If you want to go beyond the coat-hanger for indoors, I plunked down the $289 for a Dressler ARA2000 active antenna. It's an 18 inch PVC looking tube with a small brain that connects to your radio. It covers 50mhz-2000mhz and even in the 40mhz range it picks up considerably better than the Radio Shack mag whip. The Dressler is mounted indoors on top of some furniture, the RS Mag Whip was oustside mounted to a piece of metal (for ground plane).

It's expensive, but if you are really limited on space (I have strong rules where I live in a Nazi townhouse community), it really sucks in the signals. Even though I'm in a somewhat urban area, it's mightly quiet, better than the RS whip.

I have a LED sign that can display data from a Motorola Data Receiver. News and weather and the such. This is actually a pager with a data out port. Does anyone know anything about these signs or pagers. Maybe someone has one of these signs and or data receivers that they might want to sell? Mike@aa2hs.com Thanks.

Can someone pleae tell me the proper way to "handle" Nicads? I've heard conflicting information. One person has told me to leave them on the charger whenever they are not being used. Another has told me to only charge them when they are fully discharged. Which is right?

It's his electronic buisness card (or vCard) containing his name, address
and phone number. Very unwise thing to do, in my opinion. It can be viewed
with Microsoft Outlook Express and possibly other software.

In some cellular newsgroups and electronics magazines there has been
advertises for cellular phone disablers. So it mustn't be hard to build.
I have heard about a device called "Gunn -diode", which should transmit
microwaves. Does anybody know about them?

>I have a BC9000 XLT and want to know what the HI-Cut option is for.

The BC9000XLT's Hi-Cut feature is a simple low pass filter
which reduces the high frequency response (treble) in the
audio output.

Owners of the previous model, the BC8500XLT, said it had
too much hiss.

> into the US for intented sale in the US.
>
> It is NOT illegal to purchase a non-FCC type accepted receiver
> overseas & bring it back WITH YOU to the US.

Same as how it "is NOT illegal to purchase non-FDA approved
drugs" overseas and bring them back in? Yeah ri--ght.....

And....this is where your ignorance shines brilliantly. You
dumbshit, there is no such thing as "Type Acceptance" for
receivers; TA is strictly for transmitters.

Furthermore, the process for FCC approval of receivers and other
electronic devices (transmitters excepted) *is* called CERTIFICATION.
All you have to do is stop licking bedpans for a minute at that
looney tunes hospital where you work and check it out.

And whilst you're at it....get down to the dentist for a
haircut and a fix for that 3-inch overbite of yours. Only
thing you can do with it that's impressive is suck a tennis
ball through a garden hose and the chrome off a trailer hitch.

Better find yourself another identity instead of with that
Phoney Amateur Radio Group (PARG)....this'n is headed for my
Shit List most expeditiously.

See ya around, Mongrel Monkey Nincompoop.

Johnnie feels that he got porked first. You see,
I singed his tail feathers a couple of years ago
in the FidoNet SCANRADIO group that I moderated.

Well, Mackey got to acting uppity and frisky and
made a few passes and unsavory propositions to
people, so I gave him a Size #13EE crosswise on
his sweet patooty and evicted him from the forum.
As moderator, it was my forum and he felt he didn't
have to follow the rules. So I kicked his ass out.

Simple.

He's been sore as hell about it ever since and
won't let up. It's turned into the equivalent of
a "stalking" issue now. Mackey wants some of me
so bad he can taste me.

That's why he acts the way he does. Well, that and
the fact he can't hold his water.......

<grin>

>>There is STILL no LAW forbidding modifications to radios, by individuals OR businesses. If charged, I have NO doubt that Grove or anyone could easily beat that 'rule',<<

This is true. Bob and I talked about this shortly after the hearing and his position - and the reason Grove Ent. stopped performing the cellular modifications - was that while it's likely he could have won a court fight it would have been expensive; that Grove wasn't doing many of the mods anyway; and that a simple change in the wording is all that is needed to clearly make modifying illegal so even if he won the battle in court he would have lost the war in Congress eventually anyway.
Of course, now we know that rather than amend the ECPA to clearly make cellular restoration mods illegal they've decided to include that as part of H.R. 2369.

John

Yep, questions about scanning are stupid--at least to people who have no intention or ability to answer them.

Hey John, I'm thinking about getting the BC3000 or the PRO64. Can you tell how they compare? On one hand I like the fast search/scan speed, but on the other, I like the computer programmability. Do you think I should base my decision on sensitivity and go with the better performer?

We know one thing for sure: John knows NOTHING about scanning. The sole reason he shows up here is to disrupt the newsgroup. You will notice that in the past 24 hours, he has posted more than a dozen flames and has not offered one single word of advice or help. He's been doing that every 2-3 days for about a year now.

Why do the rest of us have to be subjected to this sophmoric feud between Mackey and Cheeks? Some of us would like to read posts about our favorite hobby without having to wade through the numerous crybaby rantings posted by these two "gentlemen". It's like junior high school all over again.

Why don't you guys meet each other on neutral ground, beat the tar out of one another, and move on? Enough is enough!

Incidentally, you have both destroyed any credibility either of you may have had in the past.

73's
Ralph

As I pointed out before, there aren't many channels for these phones.
The un encoded phones on 49 MHz have only 25 channels, the analog
phones on 900 have only 40 channels, and I'm not really sure about the
spread spectrum phones.

The only thing that keeps these phones out of each other's hair is a
"security" code which is broadcast before dialing. It's the security
code that prevents your neighbors from dialing your phone...

I'm really curious about the spread spectrum phones, though. There
may only be one "channel" or chip on these phones. The only
separation may be the clock, the chip length, and signal strength.

> port, with the pooter. The preferred frequency range is 40 - 80 MHz.
> Obvious possible transmitters are east-European FM radio stations and
> VHF TV station audio.

Band I TV stations are probably the best bet since you can detect the AM video carriers using a scanner with SSB mode. This will reveal very weak signals, lower level ones than the scanner's signal strength meter (if it has one) will show. You will hear heterodyne whistles corresponding to the difference between the scanner's VFO (the frequency its set to) and the incomming video carrier. They can be very brief as the the ionisation trail produced by the meteor is produced and vanishes - these are known as pings. The main band-I TV video frequencies are (from memory);

Western europe, (CH. E2 - 48.25MHz, CH. E3 - 55.25MHz, CH. E4 - 62.25MHz)
Eastern Europe, (CH. R1 - 49.75MHz, CH. R2 - 59.25MHz, CH. R3 - 77.25MHz)
Italy (Ch. 1A - 53.75MHz, CH. 1B 53.25MHz, Private Italian TX - 47.872MHz)

Bear in mind that frequnecy offsets from the above nominal frequencies of up to +/- 40KHz are common.

I use an Yupiteru 7100 for TVDX. It's an excellent scanner but is (was) an expensive one.
Hope this helps.
Tom.

2420. Pro-2006 Clear/Reset/Restart???

Newsgroup: rec.radio.scanner
Date: 1997-12-22 00:00:00 UTC
From: actfront92@aol.com
Message-ID: <19971222180901.NAA25607@ladder01.news.aol.com>
Source record: 176558

How do I clear out all the programmed data on the PRO-2006?

There is a "RESTART" recessed button on the back panel. On the PRO-2021, depressing such button will clear out all the frequencies programmed into it. But this doesn't work on the -2006. Depressing it does reset the BANKs, so that all are enabled. But that's about all I can figure out?

Anybody have some answers?

What I would like to do is at the touch of that one recessed button clear all the programmed freqs and reset all channels to be locked out (leaving only the first channel in each bank unlocked, as with the BC-200XLT.)

If there is not straightforward solution, is there a mod that can provide this function?

Thanx in advance,

-92

2427. Icom PCR-1000 Commands: The List So Far

Newsgroup: rec.radio.scanner
Date: 1997-12-22 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <34b2ca75.165694045@nntp.atlanta.com>
Source record: 176565

For those of you who want to write your own applications to control the ICOM PCR-1000, here's a little help. This is what I've decoded so far:

Version 1.00
12/21/97
John "Chris" Wren, KD4DTS
jcwren@atlanta.com

Assuming that you've started by turning on power to the radio, the radio comes up at 9600 baud, and continually sends H100<cr><lf>. This indicates the radio is alive, but "off". An application should then send H101<cr><lf> to the radio to turn it on (DTR also needs to be asserted). The radio will then reply with "G00". There may be some action regarding the control lines (RTS, CTS, DSR) here, but I didn't record that. The ICOM application then sends G105, which sets the serial port rate to 38400. At that point, you're ready to rock'n'roll. You'll need to set the volume and squelch before you'll hear anything.

Sending commands to the radio is not time critical. If you have a terminal program connected to the radio, you can do most of this by hand. Note that most commands need to be terminated with a <cr><lf>.

I don't guarantee the accuracy, but I feel pretty good about what's here. There are a couple of commands that I have no idea what they do. Some of the commands allow interrogation of parameters, such as the GE? and GD?. These always return the same value, and may say something about what country the radio is configured for.

I don't see any command that gives away what version of the firmware you have. That would be a nice one to find (of course, there will only ever be one release, because if there was a bug (and Icom *never* ships radios with bugs in the) it would be a feature, and couldn't be changed.

There are a couple of commands that I have at work that I will add to this list. They dump some values that seem to have something to do with the band-scope functions. When I get around to picking those up and checking them out a little further, I'll post a revised list.

There are 4 surface mount resistors in the radio, near the one corner. We replaced these with 4 DIP switches in an attempt to figure out if the cellular block could be defeated. To date, no success.

There are diode packs on the other side of the processor that might do something, but the person I borrowed the radio from was paranoid enough about the change with the resistors. Anyways, I don't have the results of interrogating any registers with the DIP switches in other than the default position.

All parameters are hex values, but are sent as ASCII. I.e. (from the chart below), J40 is the volume register. It requires that 2 bytes follow, which are value to set the volume to. 0x00 is the lowest volume, and is sent as ASCII-0, ASCII-0, not <0x00><0x00>. 0x7f is the midpoint (in theory. It's non-linear), and is sent as ASCII-7, ASCII-F.

Power H1xx
00 = off
01 = on
H100 is sent whenever the radio is off

Power Inquiry H1?
returns 00 if off
returns 01 if on

Results G0xx
returns 0x00 if command good
returns 0x01 if command bad (seemingly)

Baud Rate G1xx

All,

Knowing that Bob would want to take care of any unsatisfied customers I forwarded Dale Ireland's <direland@drdale.com> original complaint letter to Bob. It's my understanding that Bob has been in touch with Dale and the problem has been worked out. It seems there was a misunderstanding and the folks in the Grove shipping dept. were holding the entire order until the out-of-stock items arrived.
It's interesting to see that his complaint made it to the newsgroup, but the fact that Bob Grove contacted him and solved the problem did not.

Actually, you are in an interesting 'grey' area of the law.

While you have broken one law, you have come upon what is still a crime
in many states (in fact someone recently received a huge cash award under
some contract law -- the ruling was that one who acts in such a way as to
intentionally contribute to the violation of a standing marriage contract
can
be sued in Civil court.) and you *may* be *required* in that state to
report
crimes (but you should have reported the crime to the police - a tough
situation, considering who one of the 'criminals' was!).

Question: Does the discovery of a crime as a consequence of an illegal act
free one from the requirement to report that crime?

Most Likely: You will not be prosecuted, because the husband will not want

you to drag his personal life story (likely to be sordid) and that of his
wife,
and the cop though the newspapers. And the cop will not want to be demoted
or fired. You may want to think about moving real soon, though. :-)

Special Note: It is interesting, is it not, that the husband who was being
cheated
on attacked the messenger?

What a world! DavidC

Dozens are possible. At least the following:

1. Tape Recorder Jack
2. Automatic Tape Recorder Switch (beats VOX!)
3. Extended Delay
4. Tone Decoder-Rejector Countermeasure
5. CTCSS mods
6. S-Meter
7. Scanner-to-Shortwave Interface
8. Carrier-On-Indicator
9. Audio Improvements
10. Beep volume or disable
11. Squelch Improvements
12. Remote Controller
13. Baseband audio output for data decoding
14. Event or "hit" Counter
15. Shielding of plastic cases
16. Improved Adjacent Channel Rejection
17. Speed up of SCAN & SEARCH modes
18. Interfacing to a computer
19. Extended Memory to 6,400-channels & up

Mark, get back in there and clean ALL of that solder away. The ONLY pin which should be grounded is pin 7. This chip is a memory IC, an AK93C67F. It ties directly to the CPU and the PLL chips on the RF board. In fact, pin 8 (the one closest to the corner of the logic board and possibly the one which is covered) goes directly to IC101 and 102.

I am considering buying a Uinden Bearcat BCT-7 for use as a base station scanner. Any comments or recommendations good or bad on this unit would be appreicated.

Also it looks like it does not have a numeric keypad for channel selection if anyone has used one I would like to know if this is a major problem or convienence in programming channels, as this will be used primarily just to listen to local fire, police, weather and aircraft.

Any and all comments appreicated

Thanks
Ron

> Sure. Try the one that came with the scanner. Or stick a
> coathanger in it. Or a piece of wire. Any indoor antenna
> is "great".

You could straighten out that coat hanger, make an off-center fed vertical dipole and get decent reception. I can pull in the NWS station about 90 miles away with one. I've also used some cheapo $19 rabbit ears from K Mart. I've heard quite a bit of skip and some 2x images from 15 MHz shortwave. The only problem is that I have to sit there and hold the antenna so the elements are vertical.

> Or....maybe buy Radio Shack's magnet mount scanner antenna
> and glum it to the top of your refrigerator. You probably
> can't do much better than that. And it won't be good.....

I use one of those all-band whips on my car. Gets GREAT reception. I can hear 4 or 5 NWS stations from all over the state.

Don't know if this is true or not, another ham on packet claim you can receive the manuals for a price by sending your request with a copy of your ham license. This from what I understand, will get you a service manual.

I would like to know if this works as well.

> charge them when they are fully discharged. Which is right?

Generally, it is not considered a good idea to leave a Ni-Cads
on a charger continuously. But in reality it is not really harmful
to leave them on a trickle charger.

A trickle charger typically uses the "standard" charge rate of
one tenth of battery's capacity, or C/10. This is often called the
"10 hour rate" - even though it usually takes about 15 hours
to fully charge a battery this way.

The advantage of a trickle charge is that most Ni-Cads can
tolerate the heat generated by standard rate overcharging. You
can only put so much power in a battery. Once it's charged,
if you leave the charger turned on it simply turns the excess
power into heat - and heat is an enemy of a battery.

I have a radio that I leave on trickle charge most of the time. I
usually leave the radio turned on as well so the charger is sort
of "floating" the battery rather than overcharging it.

Fast chargers, thoses that run at C/1 or in some case even
higher, are a different story. Batteries get hot on most fast
fast chargers. Regular use of high rate chargers will shorten
the useful life of the battery. You lose about 20% or more of
the charge cycles that battery might have had if it was slow
charged. Just the price you pay for the convenience of quick
charge times.

This contention that you should run the batteries down
completely before recharging is a holdover from the days of
real "memory". The Ni-Cads made today are really not
suseptable to any real memory effect. It takes repeated,
indentical discharge cycles to create a memory in a Ni-Cad,
and it is not a permanent condition. A couple of full cycles
and the battery will be back to normal.

Memory is the most misdiagnosed problem with Ni-Cads.
What many people blame on memory is more likely a case of
undercharging, damage from long term overcharging, not
using the right battery for the desired duty cycle, or some

other problem with the battery.

Be careful if you chose to "fully discharge" your batteries. A Ni-Cad is considered discharged when it reaches 1 volt per cell. Discharging any further than 1 vpc can result in cell reversal, excess gassing, or venting.

The only time I ever "condition" Ni-Cads is when they have been stored for a long time without use.

My general guidelines for handling Ni-Cads -

If your going to intentionally discharge a battery completely, do it with care. You can cause more harm than good if you overdischarge.

Charge batteries at moderate temperature (60F to 80F). A warm battery will not take a full charge. A cold battery can rupture when charged. And remember that if you have been using the battery pack out in real cold weather, it may take a couple of hours for it to get to room temperature internally.

Don't let batteries stand on a charger for more than 24 hours. At the C/10 rate it takes a long time to do real damage, but long term overcharging is not a good pratice.

Don't get worked up with concerns over memory. Unless you are repeating identical discharges consecutively, it's just not and issue.

Don't "condition" (multiple full charge/discharge cycles for naintenance) unless you think there is a problem with the battery. They don't last forever and you use up useful life when you cycle them.

> -K2

<Unending Jerry Springer Episode from Hell snipped>

I have tried to stay out of all this, but I simply must voice a protest.

Bill, while this guy may not have come off as politely as you might like, I can appreciate the message in his post - Enough is Enough! We all know John Mackey is an idiot, his own moronic off topic drivel proves that without anyone saying a word. While it's fun to piss him off sometimes (I do it too, I admit it) the best thing to do for the benefit of all of us is to simply ignore him. When his trolls fail to achieve the desired result, he'll crawl back under his rock and that will be that. (In fact I haven't seen a posting from him in a few days - we can all hope, right?)

While I respect your scanner knowledge (the only thing I've ever been able to do to a scanner is turn it into a paperweight), I have to say that the way you react to people's criticism is troubling. And before you point me to your mistletoe shirttails, let me say that the only reason I say this is because a lot of people look up to you. They will think that since you have flamed so-and-so then this must be the place to do it and they can flame whomever they want, and before you know it this NG will consist of everyones personal pissing contests instead of scanning topics. (This has already happened, and now it's getting worse.)

My point is, let's all (me included) just drop the bullshit here. We are (for the most part) all responsible adults with some degree of education beyond that of the average joe, therefore, let's set the example. It's not fair to a scanner newbie who is looking for answers to a scanning question to have to wade thru all this crap. Don't you agree?

Thanks for hearing me out.
-Phil

There are some folks out there who might actually believe this bullshit. It doesn't work!! Check out back issues of Car and Driver, where they tested a bunch of these items, along with some radar/laser detectors. Only one "cloaking" device actually did anything at all, it was over $500, and only did X and K band. No Ka at that time (but it was coming), and no laser help.

Save your bucks........

Well, as of today (23 Dec. 1997) all the service manuals for RS scanners, that I ordered in the last week, have arrived at my doorstep.

I ordered around 6 of them. All were for scanners that require mods. for cell freq. I don't need them for that cause. I just own them and want all the manuals for those scanners. I like to have whatever it takes to repair them.

Granted, any service manuals for RS scanners made after May, 1997, are NOT available. That includes pro-90, Pro-2050, etc.

So they are available !!!!!! Mitch KB5XE

>
> DENNIS in GA

was this for the pro-62 or the base unit (which it seems he was selling for a friend)

I contacted him in a very brief email yesterday about 5pm eastern indicating I wanted the pro-62, and left home.

At about 2 am I returned home and found he had responded within an hour, with his address and saying it was available.

I did a dejanews search on him and found he sold a few items (radios and some stereo equipment) on the newsgroups for some time. A seach for his name in the subject line came up with no items (I was looking for any complaints, like yours) There were none, so I emailed him back saying i would send the money order out today (tues)

Either A- we're talking about a different scanner sale, so none of this is applicable

or B, he promised it to me at 6:05 pm eastern, but didn't hear from me to confim I was sending out the check for 8 hours, and may have lined up other buyers. (meaning you) When he did hear from me, he may have just honored the original
deal, (with me)

Anyway, I will promptly post when I return home on January 6 indicating if the scanner came and it's condition.

I'd just hate to have a guy's reputation tarnished over a misunderstanding, especially if he has done all these deals and nothing else has gone wrong.

Sure there are scoundrils on usenet, but the good guys (and I suspect Paul is) need their reputation upheld so that these type of transactions don't get a bad rap, unless warrented.

BTW does anyone know of a clearing house for these type of transactions? I used to subscribe to Audiomart, and, if both parties agreed, the publishers (for a fee) used to hold money orders until the buyer was satisfied . They stopped because of the thousands of transactions each year, only a few people requested (or needed) this service.

It really depends on how the cells are being charged. If it's with your typical wall-wart charger, it's probably best to remove them as soon as they are charged. A conditioning charger, however, typically gives a "maintenance" charge that will keep the battery at 100%+ indefinately.

You should charge them up when they are basically "dead" for maximum cycle life. By dead I mean your scanner don't work no more with 'em attached. Don't run them down flat as there's not benefit to this.

IMO, and others', the best way to care & feed your NiCads is with a conditioning charger. If you don't have a conditioning charger the batt's simply won't last as long - so budget for more of 'em sooner.

NiCads self-discharge once removed from the charger and this becomes particularly evident as the cells age. I suspect that a lot of people consider this the "memory" effect.

Cheers!

I'm not trying to sound like an ass, but do you have the squelch set
right on the minimum edge? This will elongate the squelch tail to be
sure.

The weaker the signal the longer the squelch tail.

> -Ian

Well the Uniden Trunk Tracker 235xlt is a nice scanner, and $249.00 is a good price for a new one. Now weather or not you really needed it is up to your own listening habbits and how many actual trunked systems there are there that you will monitor.

Based on your statements, and presumptions about its capabilities. It sounds like it isn't working.

>
> Thanks, SteveBriefly...
Cell phones use a method very similar to "trunked" radio systems (like
Motorola, GE and Johnson use). The cell "system" uses a frequency (or
frequencies) as control channels that data info is transmitted to and
from each phone to and from the tower's system. These control channels
negotiate available "frequencies" for the phone to communicate through.
Since the phone can use any one of several frequencies, you cannot
always monitor a single phone always on the same frequency.
Cellular frequencies are given elsewhere on the internet. Just search!

> David ShineSounds much like something heating up! Depends on if you can hear
"static" noise with the squelch control at min. This would help isolate
the problem to audio or IF circuits. If you hear nothing-- at all,
suspect audio circuits (output IC or transistor).
Contact me with more specific info...

First off, anyone will tell you NO one in the US can sell an unblocked
scanner. The ones being sold in the US are the AR8000B model. It's the
only one with the FCC "Stamp of Approval". For your information, ALL the
vendors I listed were outside US jurisdiction, not just Multicomm
2000. Second, the moral issue of whether someone chooses to adhere to
the import law or not was not the issue. The gentleman simply made a
point about price, strictly price nothing else. I'm not saying importing
european model receivers is right or wrong. Thats for you to decide.
Just providing a data point, nothing else......

2483. (LONG) EDACS control channel monitoring with your computer

Newsgroup: rec.radio.scanner
Date: 1997-12-23 00:00:00 UTC
From: qwertyuiop10@juno.com
Message-ID: <882938742.863371268@dejanews.com>
Source record: 176406

How to monitor the EDACS trunked radio control channel
(First of 2 postings)

INTRODUCTION

This posting gives a rather sketchy summary of the operation of Ericsson GE's EDACS trunked radio control channel, describes an op amp interface that connects between your PC compatible's serial port and your radio scanner's discriminator, and lastly includes a C program listing that decodes and displays the trunked radio system activity on your screen. This single op amp interface along with some slight program modifications described later will allow one to construct an "EDACS TrunkTracker" that passes active working frequencies to your scanner, automatically detects the end of voice transmissions (incidentally also eliminating the anti-scanner tones), and returns to the control channel to await the next frequency assignment.

It is hoped that someone else will be able to pick up the ball, correct the inevitable misconceptions and errors in this posting, and develop a much nicer feature laden package (as has happened with the trunker program for monitoring Motorola's trunked radio control channel). As with the original trunker program posting, anyone who so desires should feel free to take anything useful from this posting in developing their own freeware / shareware / whatever product.

EDACS Control Channel Information

Modulation : It looks like GMSK (Gaussian Minimum Shift Keying) which is basically the same thing as two level FSK keying except that the data stream is passed through a low pass filter before modulating the carrier. This reduces the high frequency components allowing the control channel to fit within a 12.5KHz channel. Accordingly, a simple data-slicer circuit can be used to receive the control channel information.

Baud Rate : 9600 Baud

Frame Sync : Frame synchronization is achieved by sending the following 48 bit sequence:

000101010101010101010111000100100101010101010101

or

0x155557125555 Hexadecimal

Data Frames : After transmission of the frame synchronization sequence
TWO data frames will be transmitted and then the whole
cycle repeats ad infinitum. Each data frame is 120 bits
long; this means 288 bits are transmitted in each cycle
(2x120 bits for the data frames and 48 bits for frame
sync).

Each data frame consists of 40 bits of information
transmitted three times in a row. In the second
transmission the data is inverted. This seems to serve as
some sort of primitive error correction scheme - in case
of a receive error one may assume that the one bit that
doesn't match the other two is bad.

The 40 information bits in each data frame seem to have
the following functions:

Bits Function
------- --
0 - 7 : These eight bits are the command bits
8 - 12 : Logical channel number
13 : Status bit
14 : Status bit
15 : Status bit
16 : Status bit; guess at possible use:
group call if set to zero, individual
call if set to one (radio ID then is
given by bits 17 - 27)
17 - 19 : Agency ID (3 bits) for group call
20 - 23 : Fleet ID (4 bits) for group call
24 - 27 : Subfleet ID (4 bits) for group call
28 - 39 : Error detection polynomial

The above tentative table seems to work well for the few
systems the I have monitored. The exact use of the status
bits are at present unknown to the me. The basic call
type in an EDACS system is a group call, although
individual radios IDs can also be sent for such tasks as a
phone patch.

Commands : The few commands the I have figured out are:

CMD Function
--- -------------------------------------
A0h : Data channel assignment
A1h : Data channel assignment
ECh : Phone patch channel assigment
EEh : Voice channel assignment
FCh : IDLE
FDh : ID bits give system ID; don't know if
status bits should be part of system ID

There must be a number of additional commands for such
tasks as dynamic regrouping or disabling radios.

A few words about those digital data
transmissions you might sometimes hear

It would be of interest to be able to monitor those digital data transmissions that can be an integral part of some EDACS systems. This program is a first step in that direction since it allows one to determine when and on which channels these transmissions take place. These transmissions take place at 9600 baud and can be monitored with the same interface used for the control channel. The following information was gathered from monitoring the data transmissions on a single commercial SMR trunk (unknown use), some of it might be relevant to other systems.

The first part of the transmission consists of 144 bit frames. The first 48 bits are the following frame sync sequence:

101010101010101010101010101010101000010110110011

The next 96 bits are 4 bytes encoded as follows: byte number one is sent three times in a row (all bits inverted the second time), then bytes two through four follow similarly. The same frame is repeated a number of times, presumably to allow enough time for radios to switch to the data channel and achieve bit and frame synchronization. During this period the transmitted bytes are 0xD4, 0x00, 0x1A, and 0x33; presumably indicating an idle / background state. After enough time has elapsed, the four bytes are changed to indicate that actual data follows. For all the messages I have monitored these bytes are 0xC4, 0x00, 0x18, and 0xF2; presumably indicating what type of data follows. At this point the actual data transmission starts, the frame sync sequence will not be sent until after the actual data transmission is complete. The first part of the data tranmission consists of two 40 bit blocks, each transmitted three times with all bits inverted the second time around. Next, 72 bytes are transmitted - each byte is sent twice (not three times) with all bits inverted the second time. Some additional redundancy is built since the first 27 bytes are always the same as the last 27 bytes. Since this concludes the actual data transmission the system starts transmitting the background / idle 144 bit frame again. For this system the idle frame is sent maybe a dozen times, then a frame containing data bytes 0x9A, 0xAA, 0xA2, 0xC0 is transmitted about 6 times; presumably commanding the radio to return to the control channel.

THE INTERFACE

Due to the 9600 baud rate, you must have access to the discriminator output on your scanner. The interface is basically a one op amp Hamcomm type which can be used for a variety of other decoding tasks as well. The following is an ascii drawing lifted without

permission out of the documentation for Peter Baston's PD203 Pocsag pager decoding shareware package with some slight modifications (basically to eliminate the Schmitt trigger). This happens to be the circuit I am currently using.

```
>
> 0.1 uF |\ +12v
> ---||----------------------|- \|
>DISC IN | |LF \
> ---- | |411 /---------------------- Data Out
> | \ ------|+ /| CTS (pin 5/8)
> | / 1M | |/-12v or DSR (pin 6/6)
> | \ |
> GND / | GND ------ GND (pin 7/5)
> | |
> | | N.B. Pin Numbers for com port are
> GND GND given as x/y, where x is for a 25
> way, y for a 9 way.
>
>
```

If you want this device to obtain power as a parasite off the serial port you can try the following circuit (also from the PD203 documention). It is slightly modified to get rid of the connection to the TxD line which one presumably wants to use to send control information to a radio scanner.

```
>
>
>
> --------------|<------------------------------------ -12v
> | | |
> | RTS (4/7) --------|<-------- GND - -
> | | | _ + 10uF
> | --------->|------- - - |
> | Diodes 1N4148 | - + 10uF GND
> | | |
> DTR (20/4) --------------->|------------------------------------ +12v
>
```

Things you need to know before you can make your own "EDACS TrunkTracker"

There are a few problems that need to be worked out before the interested reader could actually build his or her own "EDACS TrunkTracker". First, the EDACS system refers to channels in the trunked system by logical channel numbers which cannot be directly converted into megahertz. One therefore must have a table translating logical channel numbers into an actual frequencies for each EDACS system one plans to monitor. The easy way to get this table seems to be by

monitoring the control channel activity with one scanner while using a second scanner to figure out which frequency always becomes active in step with which logical channel number.

The interested reader will also have to figure out how to determine when the transmission is finished on a particular frequency so that the scanner can be sent back to the control channel. If you have several scanners you might want to dedicate one to continuously monitor the control channel while a second scanner is sent to active frequencies. The advantage here is that you will immediately know that the party you are monitoring has stopped transmitting or jumped to a new frequency since the appropriate ID has either disappeared or gone to a new channel number in the control channel data stream. For those who would prefer to use a single scanner: one could low pass filter the raw discriminator audio output and detect the presence of the subaudible data stream. Your scanner should return to the control channel once this data stream terminates. Simplest of all, one can look for the 9600 baud dotting sequence (the long series of 10101010101010... which comes out as a 4800Hz tone) that always seems to be sent at the end of each voice transmission with the same interface used to monitor the control channel. This dotting sequence is sent before, after, and in between the anti-scanner tones. My experience is that the program will detect this dotting sequence reliably and quickly enough to completely eliminate the anti-scanner tones.

Finally, one quickly tires of listening to the control channel during idle periods using the single scanner setup. The interested reader may want to use some of the serial port handshaking lines as an external mute control instead of supplying power to the op amp interface.

In summary, the reader should be able to monitor control channel activity without having to make any changes to the supplied program. If one wants to start experimenting with "trunktracking" an EDACS system, the reader will have to hook the serial port TxD line up to a scanner with any necessary level translation circuitry, place some code into subroutine set_freak that sends the correct sequence of bytes to your scanner telling it to change frequencies, uncomment a few sections of code in subroutine show_active, make sure all serial port parameters are set correctly (these are the baudrate and the parameters in routine set8250), place a translation table relating logical channel numbers with actual frequencies for the specific system you plan to monitor into array chan[], and tell the program on which logical number the control channel happens to be. With these changes the program will jump to any active channel (without regard to the group ID) and jump back to the control channel when the dotting sequence is detected or any key other than space or escape is pressed. Improvements are an excercise left for the reader.

THE PROGRAM

Windows users beware: this program will probably only work running from DOS. This is because Windows may interfere with the program's low level access to your computer's hardware and disrupt the exacting timing needed to decode the incoming data.

This paragraph gives a short description of how the program works. Every time the incoming data stream from your scanner changes state, the op amp data slicer's output also changes polarity. Each time this happens an interrupt is generated since the data slicer is connected to one of the serial port status lines. The interrupt handler (comint) stores the number of system timer clock ticks since the last interrupt and the data line polarity in a buffer. The main program extracts a raw bit stream from this buffer by synchronizing a 9600 baud receive "clock" with the the timing of the transitions and then looking at the data polarity halfway between the bit transitions. This raw bit stream is passed on to the frame_sync routine. In addition to checking for the dotting sequence, routine frame_sync examines this raw bit stream and extracts the actual data frames which are sent to routine proc_frame which peforms the error correcting on the raw data. Routine proc_frame passes its data on to routine proc_cmd which does the CRC check and formats the received data. The output of proc_cmd is a stream of raw control channel commands which are sent to routine show. Routine show figures out changes in system activity. It informs other routines when a group becomes active and on which channel (routine show_active) or when a channel is no longer active (routine show_inactive). Currently these other routines only format and display this data on the screen.

On start up the program quickly checks to see if any data is coming from the interface. If none is detected it will inform the user of the problem upon termination. If the interface is working properly the program immediately starts trying to decode the control channel information and will also automatically determine the polarity of the incoming data. When it has locked onto the incoming data the spinwheel in the upper right hand corner of the screen should start spinning. If that doesn't happen: make sure you're actually sitting on an EDACS control channel, see if your interface works with other decoding packages such as the PD203 POCSAG pager decoder shareware, and if all else fails look at your discriminator and interface outputs with an oscilloscope to make sure the data getting into your computer looks like a relatively clean 9600 baud waveform. You can use a command line option to tell the program which COM port to use ("/COM:y" where y is the COM port number) and how many channels are used in your EDACS system ("/NC:x" where x is the number of channels), although there is no real reason not to leave the default number of channels at 20.

Compiling the program: snip out bottom portion of this posting, save it to a file, and feed it into your C compiler with appropriate settings for a program that uses low level interrupts (in my Borland Turbo C compiler one should disable the "use register variables" optimization and the stack warning). The program will definitely compile with Turbo and Borland C compilers.

The actual program listing is given in the second posting.

Sorry if I'm wasting bandwidth but I don't have a web page where I could have put this stuff for interested parties to download. If anyone wants to try to contact me send email to "qwertyuiop10@juno.com"; but please keep in mind that I cannot promise a reply.

I also recommend the RecAll program. For $15.00 it real cheap. The
program is very easy to use. Their web site is a little difficult to
find so here is the complete address " http://www.sagebrush.com/~sells/

Clark

I also have a PRO 2005 and I love it, but, I do wish it would have two
other options.

1. to leave priority on when searching frequencies,

2. to have more priority banks like my Bearcat 890 does.

2494. Needed: Beta Tester For TRUNKER.EXE And R7000

Newsgroup: rec.radio.scanner
Date: 1997-12-23 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <34c7437d.196679269@nntp.atlanta.com>
Source record: 176425
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment,alt.radio.scanner

If anyone out there in net-land is in a position to test a version of TRUNKER.EXE that supports the Icom R7000, please let me know. You'll need a radio to monitor the control channel, a slicer, and a R7000. I'll need to know what baud rate you have your R7000 set up for. It *will* have to be at the default address of 0x08 (unless you have more than one of these, you probably never had a reason to change it). I would prefer someone who has experience with monitoring trunking systems.

Please don't expect a reply until sometime mid-morning if you can reply. Please note that this may take a couple of iterations to get right, also.

According to my 2006 manual, on page 23, under heading - Using the Restart Switch :
To clear all memories, be sure the scanner is turned on and:
1. Press and hold [CLEAR].
2. Using a pointed object, press and release the restart switch.
3. After confirming that the display goes blank, release [CLEAR].

Hope that helps. Jim S.

I've always heard it to be recharge after a full discharge. Never can seem to get it quite right, though. If I wait until they are fully discharged, they always seem to die right when I need them the most. To get the most life from them, recharge after full discharge.

>-K2

Multicom 2000 is in England...an unblocked AR8000 can't be imported into the U.S. as far as I know. Stop posting BS. HRO, AES and others sell the AR8000 for $599.00 discounted. Please post one or two places here in the United States that will sell an "unblocked" AR8000 for around $422.00 delivered...I'd like to call them. I bet you won't post because you can't buy them at this price...stop posting BS. If you want to play "price police", get your facts right first...you're ignorance is showing.

> charge them when they are fully discharged. Which is right?

As if often the case.....both are partly right and partly wrong.

The answers, however, are not all that crystal clear. Instead,
it is best to understand a few guidelines as follows:

In general, there is no harm to *continuously* recharge
a NiCd cell at a rate equal to or less than 10% of the
mA/h rating. So a 600-mA/h cell can be safely recharged
indefinitely at 60-mA or less.

However.....it is a good idea to remove the cell(s) from
the recharger after they have reached a full charge and
not recharge them again until they are nearly fully discharged.

Full charge of a NiCd cell is 1.44v (+/- .04v)with any more
than that being a destructive overcharge. Full discharge is
considered to be when the cell drops to 1.0v. This is why
NiCd cells have a "nominal" rating of 1.2v - 1,25v, which
happens to be "half charged".

Sustained recharging at a rate less than 10% (C10) of the
mA/h rating will probably result in the cell never reaching
a full charge.

Recharging at a rate greater than 33% (C3) of the mA/h rating
will probably result in damage to the cell, especially if
this rate continues for any length of time. Short periods
of a greater rate (a few seconds to a few minutes) are
probably not harmful.

If you have a good cell and a good recharger (that "knows"
the minimum and maximum limits, there is no harm in leaving it
on charge and forgetting about it for a day or two. It is wise
to remove it from the recharger as soon as you "think about it".

With this big picture in mind, your NiCd (and NiMH) cells will
thrive, live long, and prosper.

Thank You.

2507. WiNRADiO: Last call for Beta Testers

Newsgroup: rec.radio.scanner
Date: 1997-12-23 00:00:00 UTC
From: bcheek@san.rr.com
Message-ID: <34a06f9a.45174396@news2.cts.com>
Source record: 176438
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave,rec.radio.amateur

Last call for Beta Testers for hacking WiNRADiO's data files.

Qualifications
==============

1. You must own and be familiar with WiNRADiO model WR-1000i

2. You must agree to test some procedures and files that
create and read from WiNRADiO memory and autostepper files.

3. You must have a working knowledge of comma-delimited
ASCII text files and how to generate them from database
and/or spreadsheet software.

4. You must have a substantial resource of data in some
other form that you WISH were *easy* to import into
WiNRADiO's files; e.g., PerCon, ScannerBase, or Grove
frequency data on CD-ROM, etc.

5. You must agree to provide timely feedback on the
procedures and files that will be given you.

6. You must be running Windows 95 or Windows NT 3.51/up

7. You must be reasonably proficient at working from the
command line.

8. You must be capable of working on this project via e-mail
and of receiving files by e-mail attachment in ZIP archives
totaling upwards of 500-kB in size.

9. You must apply via e-mail to: bcheek@san.rr.com under the
subject line: WRITEWRM.PL

(Do NOT use the subject line of this post!!)

This beta test is not rigorous or overly demanding, but it does
require journeyman computer skills and a proficiency with the
command line, even though we'll be working in the Windows platform.
Desired is a broad working knowledge and understanding of databases,
data, and conversions of data from one format to another. Expert
level not mandantory - just a working level.

This beta period is not expected to require more than a couple of
weeks, but we need to get started right away, so you must be
ready, willing, and able to get down and dirty despite the holidays
coming up.

If interested and qualified, apply right away.

Ahhhhhh......another snotwad rises from the sewers of AOL? Look,
you're off base. The originator of this thread opened fire with:

-> Why do the rest of us have to be subjected to this sophmoric
-> feud between Mackey and Cheeks? ....

This wasn't a matter of "agreement" or "disagreement". It is
a matter of imbecilic idiocy; utter lunacy; or unmitigated
gall, when someone like HIM or YOU opens up like that for no
damn good reason. It is *important* that you comprehend that
I don't *want* to communicate on any sociable level with people
of such low degree like you and HIM.

I never said a thing *to* or *about* Ralpho or you until
you and he slithered out of the woodwork to squirt your own
brands of urine and feces without rhyme or reason.

And you expect *me* to rhyme and reason? Neither you nor
he could be civil at the onset.....so don't expect me to be.
You *get* what you give, Snodgrass.

> without resorting to insults and talk of genitals, feces,
> underwear, etc. Especially when there is absolutely nothing
> to be gained by doing so.

The fact that you *perfectly* understand the "invitation" is
gain enough. At least you *can* understand such elementary
levels as opposed to the blatant inability to grasp higher levels.

In the contrary....if you think you can comprehend higher
levels, then go back to the original post in this thread and
show ME where there is any matter of civil agreement/disagreement
at issue. Go ahead, numbnuts, do it.

> PS The original poster's name is Ralph. It is not Bubba,
> pal or Ralpho.

....and my name isn't "Cheeks", dipstick.

But you've hit an asymptote there. Whatever HIS name is, is NOT
yours to define. Your ol' lady's name ain't "Sweetie" either.

> Somehow, a "kick me" sign seems more appropriate that the mistletoe. Why not
> give it a try? The results would be surer, swifter and more to the point!!!

If you think you are capable of delivering it, Wingnut....do it.

Otherwise, remove your head from where it's tucked before you flatulate
and blow your limited cognitive resources outa your navel.

The "dinner" and "mistletoe" offerings are cordially extended
to you, as well. Pack sand, Ignats.

....and learn to control and master your computer whilst you're
packing sand where your head was.

Comprende?

Well its no wonder. you and john both act like asswholes all
the damn time. and neither one of you ever posts any thing
thats useful for scanning or any kind of radio period. you both
act like you got some kind of sexuel fix on cheek maybe because
he is well known and you and john arent shit.

All you and him do is follow cheek around like a panting pup.
how come you dont ever talk scanners any way? thats why even
my boss thinks you got a sex stalk thing for cheek. you dont ever
talk about nothing else. if cheek ever went a way you would
have to go back to follow your wife around. .jt

The BC9000 "scans" at up to 100 chs p/sec
depending on the spread of freqs. you have
programmed.
The TURBO mode can only be used in the
"search" mode to boost the speed from 100
to 300 steps p/sec. and then it only works in
the freq. ranges that have 5 khz ch. spacing.
Ok? Happy Scanning
Steve

(...)

thanks for your info. I completely agree with you...

Recharging on a full recharged battery may damage the battery as the
contents of the battery may crystalize. That's one of the

reasons why we recommend to discharge everything before recharging to avoid this harm to a minimum. Usually, discharging everything before recharging will keep the battery life longer. This applies to NiMH also. This concept does not apply to alkaline and Lithium based batteries.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for High End computer EQ. will be considered. All working last time tested unless noted. Shipping will be added to each item
Thanks

• Kenwood TS-820S - Digital Ham Transceiver 160-10 meters. Looks good and works well. $400

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $250

• Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks good and works well. 250-300W PEP output on SSB. $225.

• Siltronix VFO Model 80. $75

• National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $250.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$125

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $150

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

• Pro 62 - As new. Purchased 4-5 months ago. Still under warranty. Have original sales receipt box manual etc. It is triple conversion Hyperscan 200 channel scan covers from 30-960 MHz. $150+ shipping.

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150

• Sams CB Photofact- Several volums, some continous: numbers as follow: Continous 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $5 each.

• AR Inc.- Stereo Amp, all solid state. $125

• Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 and Tele-wide finder lense. $100

• Craig- 6" Reel to Reel Stereo Tape Recorder. $50

I know nobody gives a shit ....but I am unsubscribing to this ng as of now.
May try again in a couple of months and see if there is any maturity here.
Really... these Mackey/Cheek/Ashmore (and all the rest) wars are pathetic.
In parting...thanks to those who contributed usefull information even if some of those same people did not, sometimes , have the sense of humour to accept the inane taunts of others.
And a special thank you to John Mackey who contributed absolutely nothing while pretending to be protecting the rights of all of us. He seems to use the group to make up for the lack of attention given to him by his parents when he was a child. The "thank you" is for reminding me that there are, really, people who have nothing to give to their fellow men/women. I sometimes forget.
All abusive email will be ignored.

I've seen it in a catalog (can't remember where). It seems to be
a PRO-60. It has a PRO-60 style case with "RCA" silkscreened
vertically on it. The description seemed very similar. As I
recall, it was ~$250 w/adapter and case (I may be wrong about the
case).

You can recharge the 6 AA batteries in the radio...

BATTERY PACK

You can charge your 6 AA battery pack while in the scanner. I got the idea by looking at the two small contacts on the 6 battery pack, vs the one large and one small contact on the optional rechargable battery pack, which comes with its own recharger (this is the one the book says you can recharge). If you take a flashlight and look into the 64, with the battery pack removed, you will see three V-shaped silver contacts. You can see that your 6 battery pack will only touch two of the three contacts when inserted. The middle one is (+), the one closest to the center of the scanner is (-). The one closest to the outside of the scanner is what brings the charge in from the charger to the battery back. So all you need is a little piece of metal going from the (+) contact of the battery pack to the outside contact. I had a package of tape solder tabs (Radio Shack # 64-010). They are very soft metal. I kinda pinched the end of one and pushed it into the center hole of the 6 battery pack (+) contact, then folded it over the outside of the battery pack. I used a very small amount of super glue to hold the solder tab in place. Then slide the battery pack in and plug in your charger. RS has a 9 V 300 amp charger, but I already had one of their universal 1.5 - 12 V chargers. Just be SURE to use negative tip polarity.

Info from JRShattuck worked. Thanx. (Actually, I'd tried variations of this before and didn't seem to get it to work.)

When cleared, though, the damn thing leaves all the channels not locked-out and all the banks enabled. Just like on the PRO-2021. So, now I have to go and lock-out ever channel I don't program with a freq after reset. The BC200XLT doesn't have this problem. After reset, all but the first channel in each bank is locked out.

Does anybody know how to deal with this? Is there a mod? (I will repost this question as a new subject.)

Thanx,

92

I sympathize, Brian. I have a news reader with extensive kill list features. I use them ruthlessly. The news group looks much nicer as a result. If you're interested, I'll give you further information on what I'm using. I don't work for these folks in any way, but I'm a very satisfied customer.

Unfortunately, time won't make much difference here. I've been watching the NG for over a year. The twits come and go, but there are usually more than enough of them around to annoy nearly anyone who doesn't have a good kill filter.

Happy Listening,

>Ahhhhhh......another snotwad rises from the sewers of AOL? Look,
>you're off base. The originator of this thread opened fire with:
>
> -> Why do the rest of us have to be subjected to this sophmoric
> -> feud between Mackey and Cheeks? ....
>
>This wasn't a matter of "agreement" or "disagreement". It is
>a matter of imbecilic idiocy; utter lunacy; or unmitigated
>gall, when someone like HIM or YOU opens up like that for no
>damn good reason. It is *important* that you comprehend that
>I don't *want* to communicate on any sociable level with people
>of such low degree like you and HIM.

Sure it was. You DISAGREED with his opinion on the mater and started calling him names, just as you did when I DISAGREED with you Whatsamatter Mr. Cheek, do you have the warped opinion that being a good "namecaller" somehow elevates you above the crowd? Low indeed. Get back down to earth and be a man and quit the childish name calling and hurling of insults.
And, the "opened fire" reference is a perfect example of your tendency to overreaction and overkill.

Cheek continues:
>I never said a thing *to* or *about* Ralpho or you until
>you and he slithered out of the woodwork to squirt your own
>brands of urine and feces without rhyme or reason.

Oh, I see: If it not something you agree with, it is excrement. Why should you expect to be elevated to such a level so as to be immune from challenge or disagreement? And, I will leave the
"slither"-ing to you.

And continues:
>And you expect *me* to rhyme and reason? Neither you nor
>he could be civil at the onset.....so don't expect me to be.
>You *get* what you give, Snodgrass.

Where is this supposed lack of civility? Point it out. Not a SINGLE uncivil word was spoken by me. NOT ONE. Just the facts, nothing more. No, I did not call you a series of silly names or insult you, thus, I did not get what I gave. You are a firm believer in overkill, aren't you Mr. Cheek?

Mr. Cheek continued:

>> without resorting to insults and talk of genitals, feces,
>> underwear, etc. Especially when there is absolutely nothing

>> to be gained by doing so.

>The fact that you *perfectly* understand the "invitation" is
>gain enough. At least you *can* understand such elementary
>levels as opposed to the blatant inability to grasp higher levels.

Well, thank you Masa Cheek I sho' do 'preciate yo' hi' praise!!
And, I'll bet all the others out there who are 'beneath you' would also.
"Pompous", indeed! You may be the only person I know of who looks in the mirror
and perceives his head to be wider than his shoulders.

And continues:
>In the contrary....if you think you can comprehend higher
>levels, then go back to the original post in this thread and
>show ME where there is any matter of civil agreement/disagreement
>at issue. Go ahead, numbnuts, do it.

You were not called anything at all. You and JM were said to have a "sophmoric
feud", no names, no insults, NO lack of civility. But, obviously, you disagreed
with the poster's opinion and proceded to blast away with your typical Ralpho,
Bubba, snotwad, *nut, etc line. You will not stop me from disagreeing with you
by calling me names or insulting me. It will not happen. When it comes to
principles, I will not be swayed by you or your AOL surrogate.

>....and my name isn't "Cheeks", dipstick.

Never said it was. However, for some reason, it does seem more appropriate that
way. Goes well with the "kick me" sign.

And he goes on:

>But you've hit an asymptote there. Whatever HIS name is, is NOT
>yours to define. Your ol' lady's name ain't "Sweetie" either.

And, it is yours to define?
What ol' lady? You have assumed a fact that is not in evidence.

And continues:
>> Somehow, a "kick me" sign seems more appropriate that the mistletoe. Why
>not
>> give it a try? The results would be surer, swifter and more to the point!!!

>If you think you are capable of delivering it, Wingnut....do it.

DO NOT make the mistake of giving me the opportunity.
The real question is: Are YOU capable of surviving it??

And finally:

>Otherwise, remove your head from where it's tucked before you flatulate
>and blow your limited cognitive resources outa your navel.
>
>The "dinner" and "mistletoe" offerings are cordially extended
>to you, as well. Pack sand, Ignats.
>

>....and learn to control and master your computer whilst you're
>packing sand where your head was.
>
>Comprende?

Another perfect example of you unwillingness (inability??) to communicate, in a civil manner, with someone who disagrees with you. And, we do disagree (even though you didn't get it before.)

However, I will give you this: As a rule, you do not respond to JM. Which would have been quite enough for you to say originally. But, you didn't and, thus, we disagree. And, if you can decide how to refer to others (Ralpho, etc), then I can decide to disagree. It's very simple: you do what you want, I do what I want.
We don't agree, we say so. Hopefully on a civil level, if you think you are up to it.

But, I doubt it. I have seen your posts flaming others who disagreed with you and I believe you incapable of discourse on any level close to civility when challenged. Oh you can be really helpful. And even nice, when you want to be. But, I guess there's just too much chip-on-the-shoulder frustration pent up inside you for any niceties to escape on a regular basis.

Too bad.

: John, there are others that are better suited for base use.

What would be a good used price for one of those scanners? I've been considering them, just because they also scan the CB bands which can be nice for those out-of-the-way places that don't have much police/fire chat.

I bought a scanner from Paul Merrell last night thru the posting he placed in this NG.We had made all the arrangments for him to ship me the scanner and the deal was final. This morning he informed me that he sold the scanner to someone else last night after our deal was made.This is not the way things are suppose to be.
I do not know how he could sell it to someone else after I had already bought it. Merry Christmas to Paul Merrell.

That is true...the Riverside County Sheriff's Office utilizes the General Electric/Erricson 800 MHz system (like the one the police department in North Las Vegas, NV uses)...and has to be monitored in convetional scanning mode. The BC895XLT and the Pro-90 only truck-tracks Motorola systems in the 851-869 MHz range.

I have updated my Phoenix, AZ area fire and EMS frequency page. In addition to scanner frequencies, the page also contains an apparatus photo gallery and information on assignments and terminology that may be of interest to people outside the Phoenix area.

The address of the page is:

http://www.public.asu.edu/~drice

While the page contains complete information for all Phoenix area fire and EMS operations, it does not contain police frequencies. These frequencies can be located by using any major Internet search engine.

Greetings,

I am interested in buying a handheld scanner.
What would you suggest? Price should not be over $300.

Any place you recommend I should buy from?
What should I look for when buying a handheld scanner?
How good are refurbished scanners?

Answer one or all questions.

Bye

My PRO-2005 manual says to press and hold the <Clear> button while
depressing the reset switch in the back. This will clear all
memories. It probably works for the PRO-2006, too.

> all over again.

Well, pal, that is a personal problem. Your complaint is NEVER
going to be resolved until YOU resolve it. Do NOT put your
happiness and satisfaction in the hands of others. Now that
Mackey knows he can get to you, he'll go for for the gusto with
renewed vim, vigor, and vitality.

You *can* solve your own problems, regardless of what other people
out there do. Either you are master of your own computer or you
are not. If you are, then you don't have a problem, so leave
Mackey the hell alone....and me, too, whilst you're at it. If you
are not master of your own computer, then get a mastery of it before
Mackey crawls into your skivvy shorts and has a heyday.

> Why don't you guys meet each other on neutral ground, beat the tar out
> of one another, and move on? Enough is enough!
>
> Incidentally, you have both destroyed any credibility either of you
> may have had in the past.

Well, Ralpho, about all else I got to say, then, is to extend a
cordial invitation for you to eat my shorts. You come on here
all high and mighty, pompous and sanctimonious, barking up the
wrong tree as it is......so you can derned well eat my shorts
and make a brief observance of the mistletoe attached to my
shirttail.

Tell ya what you do, pal.....if the mistletoe and shorts don't
appeal to you.....take a suvey of all the posts in your queue and
count how many times I've replied to Mackey.

I'll accept your apology if it is immediately forthcoming. Otherwise,
the mistletoe and shorts reign supreme.

The rf/if bandwidth is most likley either too wide or way too narrow
for "good" wesat reception. Get a recent copy of wxsat. A very
good antenna(either active tracking or a QDH) with a very good preamp.
And consider adding an outboard if/detector try for a BW of 40Kc or so.
The ProXXXX typical has either 15KHz (way too narrow) or 150KHz way too
wide, although wide is better than narrow, at least you will get an image.
No remove do to spambots. I do not want to get rich etc......

> moderatorship was acquired after Ken Storm disappeared.

Nothing complicated about that at all. I was one of three official, ELISTed Assistant Moderators. When Storm disappeared, I contacted the other two assistants to see if they wanted to assume Ken's duties. David Stark and Mark Samwick will attest to that and to the fact that they declined. So it was my *duty* to assume the role of Moderator. That was the simple part. The only simpler thing was giving a Size #13EE crosswise to Mackey when he wouldn't stifle himself.

Look at him and how he operates HERE. It should be as obvious as fresh picked boogers on a white suit as to why I booted his ass off the Fido echo.

> Anybody heard of Ken Storm since, or is that like
> asking after Jimmy Hoffa?

He reappeared briefly when I was holding an election back in May for my replacement..... Ken demanded to have the echo returned to him. I weighed and deliberated the matter, but finally opted to continue with the election. Blake Bowers won hands down and I haven't heard a thing since.

Don't do it! The BCT-7 is good scanner for use in a vehicle if you
travel a lot, but for the money, buy a Radio Shack PRO-2041. It's
computer uploadable, has many convenience features, is triple
conversion, and is on sale at the Shack for $199.00. I own both
scanners, and believe me, you will be disappointed in the BCT-7 as a
base scanner.

That's kind of like asking what's the best gun for
shooting rabbits and elephants.

Monitorable cordless phones are in the 46-49 MHz band.
Cellular is in the 800 MHz band. There is no "good"
antenna for both 49 MHz and 800 MHz.

You'll need to settle for the all-round compromise as
chosen by thousands of other scannists: the discone.
The Diamond D-130J and the Icom AH-7000 are the best
of the breeds, but Radio Shack has a new one for this
catalog year that might be okay.

All,

For most of us, radio monitoring will take a bit of a back seat to spending time with friends and family over the next few days. But if you're like me, chances are there will be a scanner running somewhere in the background, "just in case."
Remember, though, that the disembodied voices coming from the speakers of our radios belong to real people with families of their own. Whether we're listening to HF military communications from across the globe, or to the local cops down the street, these men and women are spending their Christmas Eve and Christmas Day working to make sure that the holidays are safe, secure and happy for the rest of us. We owe them more than most of us will ever realize.
Merry Christmas, a Joyful Kwanza and Happy Hanukkah to us all.

It's easy to use a voltmeter to measure a nicad's terminal
voltage, but it's not a very accurate indication of its state of
charge. The voltage is quite temperature sensitive as well as being
dependant on the internal chemical composition of the cell.

A voltage reading is better than no type of reading, but you
can't read a voltage and get more than a very general idea of how much
charge is left on the cell.

A cell has a mA/H rating by design. The only way to know its
state of charge with any real accuracy is to keep track of how much
current goes in or out of the cell and over what period of time.
That's where the mA/H figure comes in.

My comment below doesn't mean that I disagree with you.

Many people don't make a distinction between "battery" and
"cell". You can't reverse a cell when it's discharged all by its
self, no matter how low the terminal voltage gets. It's only when
cells are connected in series to make batteries and when the battery
is discharged, that cell reversal can occur.

A AA cell is not a battery.

One reason battery packs didn't last long on the BC200XLT was because the sensing circuit for the low battery shutoff had a wrong value. So, the unit shutoff early when you actually still had plenty of battery power left. There is a fix to this problem on my web site the url in my sig file. I've done this mod and I now get up to 8 hours of use from one charge whereas before I was lucky if I got just one hour.

Also, in regards to nicad memory. This problem can be remedied by a few deep cycle charges and discharges. It's not an easy procedure, but if you _completely_ discharge and then charge the battery a few times you can get it to hold an almost full charge(80%) again .

Current through a resistance equals power dissipation.Current into a battery pack equals power dissipation.
Current fed into a discharged battery pack results in energy forming chemical bonds (poetntial energy). When all of these chemical bonds have been formed (the battery is charged) any additional power dissipation results in joule heating. This is why many "three terminal" battery packs have that little thermal switch inside. (tool batteries for example).

When your battery is heating, that means it is charged.

2588. (LONG!!!) EDACS control channel monitoring information

Newsgroup: rec.radio.scanner
Date: 1997-12-24 00:00:00 UTC
From: qwertyuiop10@juno.com
Message-ID: <19971223.012233.11975.0.qwertyuiop10@juno.com>
Source record: 176303

How to monitor the EDACS trunked radio control channel

INTRODUCTION

This posting gives a rather sketchy summary of the operation of Ericsson GE's EDACS trunked radio control channel, describes an op amp interface that connects between your PC compatible's serial port and your radio scanner's discriminator, and lastly includes a C program listing that decodes and displays the trunked radio system activity on your screen. This single op amp interface along with some slight program modifications described later will allow one to construct an "EDACS TrunkTracker" that passes active working frequencies to your scanner, automatically detects the end of voice transmissions (incidentally also eliminating the anti-scanner tones), and returns to the control channel to await the next frequency assignment.

It is hoped that someone else will be able to pick up the ball, correct the inevitable misconceptions and errors in this posting, and develop a much nicer feature laden package (as has happened with the trunker program for monitoring Motorola's trunked radio control channel). As with the original trunker program posting, anyone who so desires should feel free to take anything useful from this posting in developing their own freeware / shareware / whatever product.

EDACS Control Channel Information

Modulation : It looks like GMSK (Gaussian Minimum Shift Keying) which is basically the same thing as two level FSK keying except that the data stream is passed through a low pass filter before modulating the carrier. This reduces the high frequency components allowing the control channel to fit within a 12.5KHz channel. Accordingly, a simple data-slicer circuit can be used to receive the control channel information.

Baud Rate : 9600 Baud

Frame Sync : Frame synchronization is achieved by sending the following 48 bit sequence:

000101010101010101010111000100100101010101010101

or

0x155557125555 Hexadecimal

Data Frames : After transmission of the frame synchronization sequence
TWO data frames will be transmitted and then the whole
cycle repeats ad infinitum. Each data frame is 120 bits
long; this means 288 bits are transmitted in each cycle
(2x120 bits for the data frames and 48 bits for frame
sync).

Each data frame consists of 40 bits of information
transmitted three times in a row. In the second
transmission the data is inverted. This seems to serve as
some sort of primitive error correction scheme - in case
of a receive error one may assume that the one bit that
doesn't match the other two is bad.

The 40 information bits in each data frame seem to have
the following functions:

Bits Function
------- --
0 - 7 : These eight bits are the command bits
8 - 12 : Logical channel number
13 : Status bit
14 : Status bit
15 : Status bit
16 : Status bit; possible use:
group call if set to zero, individual
call if set to one (radio ID then is
given by bits 17 - 27)
17 - 19 : Agency ID (3 bits) for group call
20 - 23 : Fleet ID (4 bits) for group call
24 - 27 : Subfleet ID (4 bits) for group call
28 - 39 : Error detection polynomial

The above tentative table seems to work well for the few
systems the authors have monitored. The exact use of the
status bits are at present unknown to the authors. The
basic call type in an EDACS system is a group call,
although individual radios IDs can also be sent for such
tasks as a phone patch.

Commands : The few commands the authors have figured out are:

CMD Function
--- -------------------------------------
A0h : Data channel assignment
A1h : Data channel assignment
ECh : Phone patch channel assigment
EEh : Voice channel assignment
FCh : IDLE
FDh : ID bits give system ID; don't know if
status bits should be part of system ID

There must be a number of additional commands for such
tasks as dynamic regrouping or disabling radios.

A few words about those digital data
transmissions you might sometimes hear

It would be of interest to be able to monitor those digital data transmissions that can be an integral part of some EDACS systems. This program is a first step in that direction since it allows one to determine when and on which channels these transmissions take place. These transmissions take place at 9600 baud and can be monitored with the same interface used for the control channel. The following information was gathered from monitoring the data transmissions on a single commercial SMR trunk (unknown use), some of it might be relevant to other systems.

The first part of the transmission consists of 144 bit frames. The first 48 bits are the following frame sync sequence:

101010101010101010101010101010101000010110110011

The next 96 bits are 4 bytes encoded as follows: byte number one is sent three times in a row (all bits inverted the second time), then bytes two through four follow similarly. The same frame is repeated a number of times, presumably to allow enough time for radios to switch to the data channel and achieve bit and frame synchronization. During this period the transmitted bytes are 0xD4, 0x00, 0x1A, and 0x33; presumably indicating an idle / background state. After enough time has elapsed, the four bytes are changed to indicate that actual data follows. For the all the messages the authors have monitored these bytes are 0xC4, 0x00, 0x18, and 0xF2; presumably indicating what type of data follows. At this point the actual data transmission starts, the frame sync sequence will not be sent until after the actual data transmission is complete. The first part of the data tranmission consists of two 40 bit blocks, each transmitted three times with all bits inverted the second time around. Next, 72 bytes are transmitted - each byte is sent twice (not three times) with all bits inverted the second time. Some additional redundancy is built since the first 27 bytes are always the same as the last 27 bytes. Since this concludes the actual data transmission the system starts transmitting the background / idle 144 bit frame again. For the authors' system this frame is sent 11 times, then a frame containing data bytes 0x9A, 0xAA, 0xA2, 0xC0 is transmitted 6 times; presumably commanding the radio to return to the control channel.

THE INTERFACE

Due to the 9600 baud rate, you must have access to the
discriminator output on your scanner. The interface is basically a one op amp Hamcomm type which can be used for a variety of other decoding tasks as well. The following is an ascii drawing lifted without

permission out of the documentation for Peter Baston's PD203 Pocsag pager decoding shareware package with some slight modifications (basically to eliminate the Schmitt trigger). This happens to be the circuit the authors are currently using.

```
>
> 0.1 uF |\ +12v
> ---||----------------------|- \|
>DISC IN | |LF \
> ---- | |411 /---------------------- Data Out
> | \ ------|+ /| CTS (pin 5/8)
> | / 1M | |/-12v or DSR (pin 6/6)
> | \ |
> GND / | GND ------ GND (pin 7/5)
> | |
> | | N.B. Pin Numbers for com port
are
> GND GND given as x/y, where x is for a
25
> way, y for a 9 way.
>
>
```

If you want this device to obtain power as a parasite off the serial port you can try the following circuit (also from the PD203 documention). It is slightly modified to get rid of the connection to the TxD line which one presumably wants to use to send control information to a radio scanner.

```
>
>
>
> --------------|<------------------------------------ -12v
> | | |
> | RTS (4/7) --------|<-------- GND - -
> | | | _ + 10uF
> | --------->|------- - - |
> | Diodes 1N4148 | - + 10uF GND
> | | |
> DTR (20/4) --------------->|------------------------------------ +12v
>
```

Things you need to know before you can make your own "EDACS TrunkTracker"

There are a few problems that need to be worked out before the interested reader could actually build his or her own "EDACS TrunkTracker". First, the EDACS system refers to channels in the trunked system by logical channel numbers which cannot be directly converted into megahertz. One therefore must have a table translating logical

channel numbers into an actual frequencies for each EDACS system one plans to monitor. The easy way to get this table seems to be by monitoring the control channel activity with one scanner while using a second scanner to figure out which frequency always becomes active in step with which logical channel number.

The interested reader will also have to figure out how to determine when the transmission is finished on a particular frequency so that the scanner can be sent back to the control channel. If you have several scanners you might want to dedicate one to continuously monitor the control channel while a second scanner is sent to active frequencies. The advantage here is that you will immediately know that the party you are monitoring has stopped transmitting or jumped to a new frequency since the appropriate ID has either disappeared or gone to a new channel number in the control channel data stream. For those who would prefer to use a single scanner: one could low pass filter the raw discriminator audio output and detect the presence of the subaudible data stream. Your scanner should return to the control channel once this data stream terminates. Simplest of all, one can look for the 9600 baud dotting sequence (the long series of 10101010101010... which comes out as a 4800Hz tone) that always seems to be sent at the end of each voice transmission with the same interface used to monitor the control channel. This dotting sequence is sent before, after, and in between the anti-scanner tones. The authors have found that the program will detect this dotting sequence reliably and quickly enough to completely eliminate the anti-scanner tones.

Finally, one quickly tires of listening to the control channel during idle periods using the single scanner setup. The interested reader may want to use some of the serial port handshaking lines as an external mute control instead of supplying power to the op amp interface.

In summary, the reader should be able to monitor control channel activity without having to make any changes to the supplied program. If one wants to start experimenting with "trunktracking" an EDACS system, the reader will have to hook the serial port TxD line up to a scanner with any necessary level translation circuitry, place some code into subroutine set_freak that sends the correct sequence of bytes to your scanner telling it to change frequencies, uncomment a few sections of code in subroutine show_active, make sure all serial port parameters are set correctly (these are the baudrate and the parameters in routine set8250), place a translation table relating logical channel numbers with actual frequencies for the specific system you plan to monitor into array chan[], and tell the program on which logical number the control channel happens to be. With these changes the program will jump to any active channel (without regard to the group ID) and jump back to the control channel when the dotting sequence is detected or any key other than space or escape is pressed. Improvements are an excercise left for the reader.

THE PROGRAM

Windows users beware: this program will probably only work running from DOS. This is because Windows may interfere with the program's low level access to your computer's hardware and disrupt the exacting timing needed to decode the incoming data.

This paragraph gives a short description of how the program works. Every time the incoming data stream from your scanner changes state, the op amp data slicer's output also changes polarity. Each time this happens an interrupt is generated since the data slicer is connected to one of the serial port status lines. The interrupt handler (comint) stores the number of system timer clock ticks since the last interrupt and the data line polarity in a buffer. The main program extracts a raw bit stream from this buffer by synchronizing a 9600 baud receive "clock" with the the timing of the transitions and then looking at the data polarity halfway between the bit transitions. This raw bit stream is passed on to the frame_sync routine. In addition to checking for the dotting sequence, routine frame_sync examines this raw bit stream and extracts the actual data frames which are sent to routine proc_frame which peforms the error correcting on the raw data. Routine proc_frame passes its data on to routine proc_cmd which does the CRC check and formats the received data. The output of proc_cmd is a stream of raw control channel commands which are sent to routine show. Routine show figures out changes in system activity. It informs other routines when a group becomes active and on which channel (routine show_active) or when a channel is no longer active (routine show_inactive). Currently these other routines only format and display this data on the screen.

On start up the program quickly checks to see if any data is coming from the interface. If none is detected it will inform the user of the problem upon termination. If the interface is working properly the program immediately starts trying to decode the control channel information and will also automatically determine the polarity of the incoming data. When it has locked onto the incoming data the spinwheel in the upper right hand corner of the screen should start spinning. If that doesn't happen: make sure you're actually sitting on an EDACS control channel, see if your interface works with other decoding packages such as the PD203 POCSAG pager decoder shareware, and if all else fails look at your discriminator and interface outputs with an oscilloscope to make sure the data getting into your computer looks like a relatively clean 9600 baud waveform. You can use a command line option to tell the program which COM port to use ("/COM:y" where y is the COM port number) and how many channels are used in your EDACS system ("/NC:x" where x is the number of channels), although there is no real reason not to leave the default number of channels at 20.

Compiling the program: snip out bottom portion of this posting, save it to a file, and feed it into your C compiler with appropriate settings for a program that uses low level interrupts (in the author's Borland Turbo C compiler one should disable the "use register variables"

optimization and the stack warning). The program will definitely compile
with Turbo and Borland C compilers.

And now for the listing:

Hi,

What is UK's & South Africa's cell freq and does anyone have or know where I can get South African freq's from?

Regards
Ali

I have had the same thing happen with my scanner. After doing some checking around, I think i have found the culprit. The phone company here uses transmission towers for long distance calling. In this area, I have found that it is the most active around 901-904 mhz. Also in your case you could be picking up signals from 900 mhz cordless phones, although a majority of them use digital coding.

Try 162.40, 162.475, and 162.550. These are classified. You'll hear what sounds like weather information, but KEEP LISTENING! Sooner or later, you'll hear secret info for spies in your local area.

As for Air Force, I've heard Air Force stuff in the 530-1600kHz and 88-108MHz range.

By the way, Dan, have you thought of getting an AOL or WebTV account?

>Rockford likes being a messiah.

It seems that Mr. Cheek can't get through one off-topic post without
resorting to cheap shots and personal insults, couched in terms
usually found on outhouse walls. I invite anyone to go back through
my posts and compare them with Mr. Cheek's posts. I try very hard to
stick to the facts, and not to indulge in personal insults. If this
makes me a prick, then all I can say is that a prick is part of a MAN.
I'm glad to see that Mr. Cheek at least recognizes this fact.

>Therefore, the old ways and the old rules do not apply here,

Oh, but they do apply here. The only thing different here is that you
can call people names that in Real Life would get you a fat lip, or
worse.

>I hope Rockford and company take notes on how disagreements can
>be vocalized without any volcanic eruptions.

Go back and review the conversation Bill had with KUT7BH to appreciate
the irony of this comment by the Vesuvius of rec.radio.scanner.

From: Steve S <kf4nnq@hotmail.com>
Message-ID: <34A1BDE8.2B50@hotmail.com>
Source record: 176311

Did anyone notice the January 98 Pop Comm ad on page 25?

CEI is offering the RELM HS200 hanheld scanner with CTCSS/DPL and 800 MHz capability for $224.95. But if you clip the coupon at the bottom of the page, you save $55 on said scanner! I'm going to hurry before they catch the typo, if it is one!

If you don't need trunktracking, this is one nice scanner.

I have a Bearcat 760xlt scanner. I got it without a power supply and wonder what type of power supply would be best for it. Also there is no antenna other than a makeshift one. What type of anternna would be best. Want to listen to search and resuce, local police fire aircraft, etc. Also the crystal is badly chipped, perhaps it was dropped and one of the numbers on the display only reads in fragments. Is the crystal and the display replaceable/repairable?? And finally, I want to use it at home on AC as well as in car. So if that makes a difference with the power supply, let me know!

>
>Thanks....Mark

No it can not. The Radio Shack Trunk Tracker does not have all of the features of the BC895XLT. Radio Shack has done it again, they make a product that is inferior to its competition, and ask more money for it. The Shack model does not have the CTCSS either. You would be better off with the Bearcat, for $289.99.

Ed,

Monitoring Times had an excellent article (December issue, Computers &
Radio, page 84) on just the ticket you need. It's called RecAll, it has
an adjustable input level and will only record when squelch is open if
you set the level just above the closed squelch threshhold.

You can determine maximum file size (limited only by your hard drive
capacity) quality of resolution and all sorts of neat tricks.

You can download a working copy at:

www.sagebrush.com

and register it for $15 after 30 days if you like it.

For $15, it's one of the hottest things around and it works so much
better than those mechanical tape loggers that use VOX. I tossed
out my cassette recorder and use this program for logging while
I'm away from the radio.

You'll love it!

Happy Holidays,

Jon

I disagree. If he made the committment to sell to the gentleman for a quoted price, he should live up to his word. If I understand correctly, this item was not up for BID. If he let it go for a price lower than he was offered later, he can lament and change things next time. No, he should have kept his word!

> >of such low degree like you and HIM.
>
> Sure it was. You DISAGREED with his opinion on the mater

Awwwwwwwwww.....bullllllllllllllsheeeeeeeeit. Opinions
are like hind ends. Everybody has one and they all stink.
You and Ralphie's bringing me into the Mackey shit was not
an opinion....not even close. It was a horse's arse blasphemy.
A brazen lie or an example of imbecilic idiocy......

> and started calling him names,

Noooooooooo, I didn't *start* with the adjectives. I just
added a little flair and down to earth truth to the matter.
For one thing, the Ralphie jerk is a fake.

> just as you did when I DISAGREED with you Whatsamatter Mr. Cheek,

You didn't disagree in any semblance of a civil manner. And
I am not receptive to *any* but civil dealings. You got your
code, Bunky. I got mine.

> do you have the warped opinion that being a good "namecaller"
> somehow elevates you above the crowd?

Where does that insinuation come from? Your colon? It's
about as far from constructive as it gets. I said nothing
of being above the crowd. I did not talk to the crowd. I
spoke to Ralphie, the fake, and you, the horse's arse. Two
is not a crowd. Ralphie is a fake, so yes, I am above him.
And you? You are an AOL'er, so..... draw your own inferences.

> Low indeed. Get back down to earth and be a man and quit the
> childish name calling and hurling of insults.
> And, the "opened fire" reference is a perfect example of your tendency to
> overreaction and overkill.

Then be a man and don't open fire on me. Treat me EXACTLY like
you want to be treated. And that is EXACTLY what you will get
in return. Precisely.......+/- the molecular weight of hydrogen.

> Oh, I see: If it not something you agree with, it is excrement.

There you go again. We're not talking agreement, slick. We're
talking your basic, foundational, elementary....lack of candor,
or if not that, then a profound lack of essential savvy. I have
no regard for lack of truth and I am not qualified to deal with
the profound imbecile.

> Why should you
> expect to be elevated to such a level so as to be immune from challenge or
> disagreement? And, I will leave the
> "slither"-ing to you.

And you will continue to be offered choices. Munch down on my
shorts; observe the mistletoe on my shirttail by performing the
customary liplock;......or....in your case......BOTH.

> And continues:
> >And you expect *me* to rhyme and reason? Neither you nor
> >he could be civil at the onset.....so don't expect me to be.
> >You *get* what you give, Snodgrass.
>
> Where is this supposed lack of civility? Point it out. Not a SINGLE uncivil
> word was spoken by me. NOT ONE. Just the facts, nothing more.

Your post was THE FACTS? And you wonder why I respect you only
slightly less than a tapeworm?

Go snivel to your Mammy and get some consolation, pal. And get
some basic insight to the common tapeworm so's you can understand
how I feel about you and anything you might have to squirt outa
that hole in your lower lip.

> No, I did not
> call you a series of silly names or insult you, thus, I did not get what I
> gave. You are a firm believer in overkill, aren't you Mr. Cheek?

An eye for an eye and a tooth for a tooth. I can't help it if
you place little value on your eyes and teeth, Bunky. You choose
your values for yourself..... I choose mine. And you are neither
welcome nor invited to assist me in the selection of my values.
And I dang sure don't want to meddle into your low-life, goody-two-
shoe, pollyanna, happy-horseshit choices.

> Well, thank you Masa Cheek I sho' do 'preciate yo' hi' praise!!

Oh that's cute. So now you display your bias and prejudice
for certain dialects of certain races of certain parts of the
country. Goodness.....next you'll be using racial epithets.

> And, I'll bet all the others out there who are 'beneath you' would also.

Just you and Ralphie. And well....it goes without saying, your neice.
You know.....Johnna Mackey. But then Mackey is beneath everybody.
Mackey was voted most popular bitch in Cell Block 19 at state prison
a couple of years ago. So he or she is low. You and Ralphie are
running a close second.........

> "Pompous", indeed! You may be the only person I know of who looks in the mirror
> and perceives his head to be wider than his shoulders.

You sure profess to know all about my mirror. The funny thing
is......is that I'm holding it in front of YOU, fecalbreath.
You've been misled ...... major cognitive problems, sonny.

> You will not stop me from disagreeing with you
> by calling me names or insulting me. It will not happen.

Cool. I would not want to stop you from doing what you
do best. I am just disappointed that your best doesn't come
up to the level of the common urinary ant....but hey, if
you're standing on your principles, then that's what you
gotta do. But at least you could tell the truth.

Oh well, do whatever you want to do. The LAST thing I want
is to STOP you. Geezus, man....can't you tell by NOW that
I've been trying to START you?

<giggling in paroxysms of mirth, glee, and joy>

....and in the process.....got you ALL wound up and strung
out like a fiddle string playing high C.

<giggling some more...tapering off to a titter...>

> When it comes to
> principles, I will not be swayed by you or your AOL surrogate.

You're the AOL'er. You take great comfort in hinding behind
the screen name. Talk about surrogates.... are you hiring out?

> >But you've hit an asymptote there. Whatever HIS name is, is NOT
> >yours to define. Your ol' lady's name ain't "Sweetie" either.

> And, it is yours to define?

Not me. You shit your pants trying to define Ralphie's name.
I just wanted you to know that your ol' lady's name wasn't
"Sweetie", either. You have a cognitive problem, Slick!

> What ol' lady? You have assumed a fact that is not in evidence.

Okay, your ol' man, then. Are you coming out of the
closet, perchance?

> >If you think you are capable of delivering it, Wingnut....do it.
>
> DO NOT make the mistake of giving me the opportunity.
> The real question is: Are YOU capable of surviving it??

Test me. Find out.

> And finally:
>
> >Otherwise, remove your head from where it's tucked before you flatulate
> >and blow your limited cognitive resources outa your navel.

> Another perfect example of you unwillingness (inability??) to communicate, in a
> civil manner, with someone who disagrees with you. And, we do disagree (even
> though you didn't get it before.)

You don't understand. I told you you had cognitive difficulties.
I don't know how much sweeter to say it. Go to your Mammy,
your preacher, your boyfriends, or whatever and snivel to them
that Billy Bad Ass done told you the bad word from the bad book.
Which happens to be.....you lost your tickets and marbles with
the first post you came on to me with.....and I really....what part
of "REALLY" don't you understand....don't want to make any pretense
of civility with you or Ralphie.

You both blew it with your first posts. Any contracts and codes
of civility were broken and in the breaking, you got told to eat
my shorts. Don't you understand, in the vernacular, what that
REALLY means? It means you are a zero. I have no contract of
civility or anything else with you. You broke it. It ain't
up to me to fix it.

But you sit there, all high and mighty....all huffed and puffed
and affronted..... pretending surprise at how's come poor little ol'
you got hosed for your time and trouble of trying to straighten me
out. More's the pity because you need to attend to your own mess.
But you can't see that.

All you can see is my middle finger stuck up your left nostril,
picking "fruit" for you to eat.

Tough.

You bought and paid for it, Dingleberry. The rest comes for free.

> However, I will give you this: As a rule, you do not respond to JM. Which would
> have been quite enough for you to say originally.

Ahhhhhhhh sooooooooo you're going to tell ME....WHAT I should say
to someone else......and WHEN? And you wonder why I pick boogers
outa your nose and feed 'em to you?

> But, you didn't and, thus, we disagree.

How can I get across to you that I have absolutely no regard for
your opinion of anything? How can I make that amply clear?
English is my native language....and an area of my mastery, but
apparently I am failing here.

What part of "Eat my shorts" do you not understand?

> Oh you can be really helpful. And even nice, when you want to be.

It has nothing to do with my "wants". There is a singular factor
that determines how I am with others. It's how they are. If they
come on to me civil and decent, then I am civil and decent, plus one,
in return. That's my contract and my code. At least half of it.

The other half is that when I approach someone for the first time,
or any time when there is a civil status quo....I will not be the
first to break the contract.

As it is, I enjoy pleasant, positive, upbeat relationships with
a good number of people. So much so, that popinjays like yourself
stand out in stark contrast to the pleasantries of Life...and it
makes me thankful that I didn't have to find out about you the
hard way after investing a lot of time, resources, and emotions in
you.

Simply stated.....the good Lord made a lot of men outa flesh and
blood and some outa shit.....and I done found out the easy way about
you. So quit wondering and accusing me. You need to understand
that YOU broke my civil code and since you can't see that and back
off from it, then you have to be shown the mistletoe and skivvies
the hard way.

Gawd, I've never had such a difficult time of telling someone
before you pranced... in what "eat my shorts" means. And here
you sachet around wanting to argue over disagreements. Geezus H.
Kriste, man...get some savvy, will ya? And try to understand that you
don't count in my books. You're a zero. Nada. Zilch.

There is nothing to argue about. I don't care if you think
sugar stinks and shit's sweet. How can I tell you any plainer that
I just plumb don't care what you think?

> But, I guess there's just too much chip-on-the-shoulder frustration pent up
> inside you for any niceties to escape on a regular basis.

I have no desire to be nice or otherwise with you. Neither one
counts. Neither one matters. Just try minding your own business
and I'll attend to mine. Leave me outa yours, and I guarantee I'll
leave you outa mine.

I won't get any better than that.

IS that so difficult to understand?

OTOH....if you think this newsgroup ain't big enough for the both
of us and you're going to take it upon yourself to run me off....
then
you
will
lose.

Stuffing a sock in it and letting it be is as good as it will get.

Hard to understand?

Good question, and one which can spark a lifetime of controversy.

There are some articles on our website discussing care and feeding of
batteries which would answer some of your questions. Click on Articles
button, then articles "Zen and the Art of Battery Maintenance".

Bill Cheek's post below is one of the best treatments on the subject
I've seen. C/10 is the magic number.

Hope this helps ..... Steve

Then....HE.....could have *proved* his side of it by
staying OUT of it. No? But it wasn't "enough". And
he damned well proved that much.

> We all know John Mackey is an idiot,

Now THAT is unfairly debasing the idiots of the world.....

> his own moronic off topic drivel proves that without
> anyone saying a word. While it's fun to piss him off sometimes (I do it
> too, I admit it)

Then, by your standards, "Enough" is not "enough". You
play by your rules. Others play by theirs..... Your rules
prevail ONLY over you.

> the best thing to do for the benefit of all of us is to
> simply ignore him.

But you don't. I do.

> When his trolls fail to achieve the desired result,
> he'll crawl back under his rock and that will be that.

Not for two years.....

> (In fact I haven't
> seen a posting from him in a few days - we can all hope, right?)

Nope. He'll be baaaack.

> While I respect your scanner knowledge (the only thing I've ever been able
> to do to a scanner is turn it into a paperweight), I have to say that the
> way you react to people's criticism is troubling.

Why? This isn't a political, corporate, or religious forum.
It's not designed for criticism of people. Troubled as
you may be...if I were you, I'd be more troubled by the
clear fact that the people who properly could and should
be here....aren't. Why not? And the few who are....well,

they have various protective mechanisms....largely 1-way
and do not interact with others. You couldn't criticize them
if you wanted to.

But the way I see it (my rules), those who dish it out
need to be able to take it. I can take criticism so long as
the issuer can take it, too. This is not a one-way forum.

> And before you point me
> to your mistletoe shirttails, let me say that the only reason I say this is
> because a lot of people look up to you.

You've been decent and civil thus far. The thought hadn't
occured to me........

> They will think that since you have
> flamed so-and-so then this must be the place to do it and they can flame
> whomever they want, and before you know it this NG will consist of
> everyones personal pissing contests instead of scanning topics.

I don't see that. I lurked and watched for several years before I
ever bothered to post here. It's the same now as then. Just lots
of different names and tactics. Principles are the same.

> (This has already happened, and now it's getting worse.)

My observations are that the *quality* of the good posts
is going UP. Sure, the snotballs like Mackey appear to
be in grand profusion.....but that is only an illusion.
They remain few..... but squeaking wheels always do make
more noise than the silent majority. Let's not credit
them for more than they're worth, please.

Look.....you can fill a dinner plate with piles of turkey
and trimmings.....and one teeny weeny piece of shit, and
whaddya gonna see and smell? Not the turkey, that's fer sure.

> My point is, let's all (me included) just drop the bullshit here.

"Let's"? A contraction of "let us"? Sorry....IMHO....it won't
work. Same as a plea for "Let's all get along" or "Let's all
be Catholics" or "Let's all be Republicans" won't work. A person
can only abide his own code in a virtual medium. Dictators and
congresses don't work here.

This place is virtual. Not real. "Real" methodologies won't
work here. In the words of Stewart Brand,

"We can't put it together. It's already together."

Mackey doesn't exist to those who do not want him to exist.
He does exist to those who need a booster shot and a reason
to be thankful "there but for the grace of Gid go I......"
This forum is for each person exactly what he wants it to be.

Each person is Master of the Universe. At least master of
his own computer.....or should be....or could be. But some
people want to be "victims". Others want to be "saviors".
Others still want to be villains. Some, politicians. Some,
goody-two-shoes. Some, preachers. Some, shrinks. Some, this.
Some, that. There's a role for everyone. It's a stage.

And nothing more.

Except that it's also a cornucopia of whatever one wants.

And it's whatever anyone wants it to be.

> We are
> (for the most part) all responsible adults with some degree of education
> beyond that of the average joe, therefore, let's set the example.

And you are a hybrid mix of a savior, a preacher, a lecturer, and
a victim. You are not a villain or a politician, however......

> It's not
> fair to a scanner newbie who is looking for answers to a scanning question
> to have to wade thru all this crap. Don't you agree?

Nope. Not wholly. The scanner newbie needs to be able to first
and foremost...master his own computer. This is a computer forum.
If it were a swimmer's forum, he'd need to be able to swim. So
if he is a journeyman computist, he will have enough clues on how
to "wade" through the bullshit and how to sift out the nuggets
and gems. There is no other way. If a body can't handle his/her
computer and the tools for participating in a forum like this, then
this is not the place for them. Blunt. Brutal. But truthful.

> Thanks for hearing me out.

Thanks not necessary. I had no choice but to hear you out. Or
ignore you. Or use certain tools to blip you out of existence.
Such is the way of a virtual medium.

But you elucidated your points well enough. I hope I did mine.
I hope that scanners remain a primary topic here, but if not, there
are alternatives.....plenty of moderated forums and mail lists
that exclude the likes of Mackey, Quarnstrom, Rockford, Boe,
and that ilk who never participate or contribute to the positiveness
of the medium.

But it still doesn't matter. They are free same as we are. And
this is the place where each can be WHO they want to be and not
have to fear or be intimidated. Mackey enjoys being a peckerwood.
Quarnstrom likes being a prick. Boe likes being a manic depressive.
Rockford likes being a messiah.

Me.....I like being a mirror with a reflex klystron amplifier,
and a big stick in reserve. I'm a lot that way in real life.

But it doesn't matter. This isn't a real place where people's rights can get trampled. You can't get tobacco juice spat in your eye. You can't be victimized. You can't be outshouted. You can't disrupt the proceedings. You can't "do" anything, and yet you are Master of the Universe.

Therefore, the old ways and the old rules do not apply here, and even if you disagree, I'm sure you can see that they don't apply with the same gravity and "spirit" as they do out there in real life.

I hope Rockford and company take notes on how disagreements can be vocalized without any volcanic eruptions.

You could just be "lucky". The BC-200 was notorious
for battery pack problems. And heat is the great Shiva
of NiCd cells. No if's about it.

Not from most of the Uniden made scanners I've heard. The squelch can be set at maximum, and there's still a long squelch tail. It's something I personally find annoying - and a reason why I don't own one of their scanners.

Pro 2006, scanner is in MINT condition, there is not even one scratch on the case, comes in original box with manual and antenna, the RS service manuals with all addendum's are included. Speed and Cell mods done, you can own this baby for $375.00 the price is not negotiable due to the condition the scanner is in. Buyer pays shipping and insurance.

From: "h.r.baillie-johnson" <h@oncology.demon.co.uk>
Message-ID: <e04RtCAvYNo0Ew5W@oncology.demon.co.uk>
Source record: 176358

I'm thinking ofing a frequency counter - Opto, Watson or similar. Are these useful scanner accessories? They all seem to have a very short range of tens of metres. Is this too short to be useful, or does it depend on signal strength. Would one lock on to transmissions from an airport tower from a distance of a few hundred yards? Any advice would be much appreciated.

Where are you trying it out at? are you sure
there are radios being used in the area?
rember, it only picks Nbfm. it will ignore everything else. also if you
are using it with the
DB32 ant. you will need to be fairly close if its
a HT. my Scout won't register anything from
my cordless phone either because its a spread
spectrum phone not Nbfm.

> give me some pointers?

The Scout works fine, but you will be disappointed if you have expectations of snagging handhelds from a mile away. My best catch was a PD mobile radio from 100 yards away in a high RF environment (paging and FM broadcast.)

Improve your changes of reception by using antennas designed for the frequencies you are interested in capturing. I use a 2m/70cm rubber duck when I want to capture VHF-hi/UHF/or 800mhz frequencies. In the car, use an outside antenna.

Filters will also improve your reception. I use an FM filter and adaptors (available from Radio Shack) to filter out the FM broadcast band. I also bought VHF/UHF and 800mhz filters from Star Tek as well.

A preamp may help, but if you live in a high RF environment (like me) you'll be better off without it.

The frequency counter is a fairly useless scanner accessory due to limited range. Unless
you can walk right up to the radio source to read it, you can forget it. A counter is a
VERY useful tool for technicians and engineers, though. You could, however, walk by
a Nascar Pit, for example, and sample the frequency of the pit-to-car radio. For
cordless phones, as another example, you almost have to have the frequency counter and
phone's antennas touching to read the rf frequency.....pretty useless....

jimbob@acpub.duke.edu (James Meyer) wrote:

> It's easy to use a voltmeter to measure a nicad's terminal
> voltage, but it's not a very accurate indication of its state of
> charge.

That really depends on WHO does the measuring; with what; and
for what purpose.

Considering the fellow's question (who opened this thread):

KK> Can someone pleae tell me the proper way to "handle" Nicads?
KK> I've heard conflicting information. One person has told me to
KK> leave them on the charger whenever they are not being used.
KK> Another has told me to only charge them when they are fully
KK> discharged. Which is right?

....I believe my suggestions were about as close to a bullseye as
it can possible get. (Again, considering the who, the what's, and
the question itself.)

> The voltage is quite temperature sensitive as well as being
> dependant on the internal chemical composition of the cell.

..."quite temperature sensitive" is relative. If you're referring
to a few hundredths of a volt, okay. If you're meaning a few
tenths of a volt, then I disagree and submit that it can be tested
to prove it. However, the WHO and the QUESTION didn't merit or
call for a laboratory certification.

> A voltage reading is better than no type of reading, but you
> can't read a voltage and get more than a very general idea of how much
> charge is left on the cell.

No one said that anyway. But when a cell is under charge or discharge,
a voltage measurement is about as good as it gets......and it's almost
as good as that if measured immediately when taken off the recharger,
or off the load, as the case may be.

Agreed....to measure a pack that's been laying around for some
period of time....is not a reliable indicator of the state of charge.

> A cell has a mA/H rating by design. The only way to know its
> state of charge with any real accuracy is to keep track of how much
> current goes in or out of the cell and over what period of time.
> That's where the mA/H figure comes in.

That mA/h rating is good ONLY when the cell is new. After it has aged, that rating will change, usually on the down-side. Regardless, the best and most reliable assessment of the state of charge from an empirical perspective is to measure the terminal voltage when the cell is under some medium duty load. And measurements taken at light and heavy duty loads will add to the picture.

However, I don't see where this level of interaction addresses the gentleman's question. Not that it can't be discussed and dissected, it sure can.....but let's be sure to clarify the intended audience. Right off, I don't see an engineering conference in the works.....

>point about price, strictly price nothing else. I'm not saying importing
>european model receivers is right or wrong. Thats for you to decide.
>Just providing a data point, nothing else......

Making "a point about price" IS the problem here. I and several others have posted "unblocked", fully programable AR8000s here for sale recently and the "price police", including you, immediately tried to make the point that our pricing was way out of line because the AR8000 can be purchased (you say) for $422 delivered. Of course, what you're not saying is that it is illegal to import an "unblocked" AR8000 into the United States and both the overseas company and the buyer here are opening themselves to potential legal problems. All you're doing is misleading a potential buyer.

Your misinformation does a disservice to the people like me selling an unblocked, fully programable AR8000 which you can't buy anymore here in the United States. It also hurts potential buyers because some potential buyers have no idea about price and look to others on these newsgroups for a reality check...which they're sure not going to get from you. They see your misinformation posted and it confuses them...and they may miss the opportunity to buy a fine scanner which they can't buy here anymore...all because you told them they can buy it new for a couple of hundred dollars less elsewhere... which is misleading and pure BS. You're also encouraging potential buyers to break the law.

This is not a moral issue, but it is a price issue AND a legal issue. It is illegal for any company outside the United States to import an "unblocked" AR8000. Anyone who buys one overseas and has it sent here is breaking the law and could eventually suffer the consequences. So, the misinformation you posted here helps no one and could potentially hurt the buyer who thinks it's okay to buy overseas and import it...when it fact it's illegal to do so.

If you don't like the selling price of an item for sale here, then don't buy it. Keep your comments and misinformation to yourself...in simple language, you should mind your own business. Surely, you can find something more

constructive to do with your life then to mislead people.

>Bandercom will ship unblocked (no gap) scanners to the US w/o a problem. Got
>mine just the other day. Period!

Here's a perfect example of why people shouldn't post misinformation. Brian obviously saw others post misleading sales information about how to buy an unblocked scanner overseas and he probably thought he found a way to work around our laws. Unfortunately, all he did was cause himself potential hardship and legal problems. At some point, he's likely going to get a knock on his door from some U.S. government agents who are going to be asking all sorts of questions about his recent delivery. If they don't cuff him and take him away, they'll surely confiscate the illegal scanner. If not, then the law against the importation of unblocked scanners into the United States would be totally useless.

So, now Brian will sleep comforably at night knowing he saved a few dollars and got his unblocked scanner...until...KNOCK KNOCK....

DKiser69 (dkiser69@aol.com) hath said:
: I believe these are the same phones that Walmart employees use also. I ran
: across a web site once through a Yahoo search (Stupid Scanner Tricks) I think
: it was. There I found info about the Walmart ones.

Walmart is using Green Dot frequencies on 2-way radios..
154.600.... Accually most of the radios carried by them
"motorola brand" have dip switches behind the battery case
which allow you to change the operating frequency.
Wal-mart is not using "phones" they are using plain old
2-way radios in VHF-hi range....

As for the person in .au, I don't beleive they have Lowe's
outside of the US, so therefore your cordless frequencies
of 30.0 to 30.5mhz are worthless... Besides, he already did
mention that he checked all US cordless frequencies...

I like the 1.2ghz cellular theroy myself.. We have a Lowe's
here where I live in Mississippi, and they aren't employing
that technology, they use vhf-hi which I get to screw with them
because I have radios which transmit there too :)

No on will argue with the essence of your argument in this and related posts, and that is that it is illegal to obtain an unblocked scanner from an overseas supplier. However, your moral stance is quite shaky. You argue that it's okay for you to sell your cell-capable scanner, mainly because it is already in the United States, but it is not okay for say, Bandercom to sell the very same scanner, because it happens to be located outside of the United States. Your claim that buying from you is more legitimate than buying from Bandercom is terribly weak and quite disingenuous.

Also, your saying that the federal government will come seize the scanner in the dead of night is ludicrous. Surely, you are not that naive. I'm sure that you have conjured up this fantasy to make a point. Unfortunately, it only makes your argument even weaker since this is one of the underpinings of your supposedly moral point of view.

Last, the newsgroups is for the discussion of scanning and that includes scanner prices. If you don't wish for your scanner and its pricing to be subject to public scrutiny, then don't post here.

Your asking price is way out of line. I heartily recommend that anyone interested in obtaining an AOR8000 or any other scanner to buy it wherever they can at a reasonable price. I have bought several scanner from overseas and I am quite happy. In fact, I am now interested in selling a Yupi MVT-7100 that I bought from Bandercom a few months ago.

I don't claim to be an "expert," but the question (as you point out) was indeed lame. I hope that you were able to provide him with all of the freqs that he was looking for. Unfortunately, I did not see your reply to him--but I'm sure that you were quite helpful, given your own expertise in scanning as a columnist for Pop Comm.

Have you considered that most of the "experts" here are tired to providing information and answers to questions that nearly anyone can find readily by doing a web search? Personally, I'm tired to reading the "HELP, I NEED CORDLESS PHONE FREQUENCIES," and "TELL ME NOW HOW TO MODIFY MY SCAT SCANNER FOR CELL PHONES," type of questions. When questions like the one that was posed comes along, it's easy to make fun of it.

Thanks for letting "All" know how you feel. It was one of the more illuminating posts about scanning that I have read in quite some time.

Doesn't truth and information hurt! As far as I can tell you are crying because someone is speaking the truth about prices. Certainly you have a right to ask as much for your scanner as you like. In turn we have as much right to make our opinion, and facts, known.

As for not being able to obtain unblocked scanners from US merchants, that is false as well. I know of two merchants that are still selling unblocked scanners. Yes they are back-logged stock. I didn't buy from them because their price, I felt, was out of line, but still less than your price. But if we are to believe you, and I don't know all about the law, you and these merchants can legally sell them.

Remember, to say something is unobtainable or illegal does not make unavailable - and from respected sources. They do drugs in prison after all!

Pardon the double posting, but over the past few weeks I have noticed several postings and re-postings in both newsgroups on the same old time-worn subject...is cellular phone monitoring legal or illegal? And it's always the same arguments; 'I can listen, I just can't tell anybody what I heard' or, 'The cell companies should have to encrypt what they send, I'm entitled to listen to whatever I can pick up.'

Once and for all folks, no matter how much you'd like it to be otherwise, INTERCEPTION OF CELLULAR TELEPHONE SIGNALS IS ILLEGAL! PERIOD, EXCLAMATION POINT! Even though the FCC and government have better things to do than waste time trying to prosecute every individual with a $50.00 scanner, it's STILL illegal under the law. And you CAN be fined and/or jailed under the provisions of the law.

There's an easy way to settle this issue. Here's one of the sites where you can go check it out for yourself; However, it does require a little effort on your part to actually READ the material.

What on earth do you mean? I don't do "speed mods" anymore
unless someone absolutely insists. The compromise/benefit
ratio isn't worth it.

It's illegal according to the ECPA of 1986. No two ways around
it. That's the one law that covers it explicitly.

If there is a *cheek@aol.com, it's a fake. The forgers
are rolling out en masse again. Just caught me one
the other day:

-> Your Yahoo login is josh_slifer
-> Your e-mail is bcheek@cts.com

Dunno who this josh_slifer is (yet) but that dude's
headed for a whole world of hurt before I get done
with 'im. And I've already dealt with fake Cheek's
from AOL in the past, so that's an easy one.

It's my humble observation that "la cucarachas" are
among the oldest surviving species....and there's just
nothing you can do about them other than to stomp 'em
every time you can.

:-)

D> _completely_ discharge and then charge the battery a few times you can get i
D> to hold an almost full charge(80%) again .

Very BAD advice and might cause many to RUIN their NiCad Packs. The reaso nis
that you left out a VERY Imporant instruction. In the Discharge cycle yuo
should NEVER discharge beloe 1 volt Per cell in the pack. 10 volts for a 12
volt NiCad pack etc. IF this is not done, Which Reguires Constant
monitoring of the Voltage of the discharging battery(a real pain) or using a
automatic discharge unit, you stand the
chance of Reversing the polarity of one or more cells with possable Permnant
Damage.

No Bill this in NOT true. You want to believe this only
because it would allow justification for YOUR behavior.
I did NOT attack you for SEVERAL months after your little
game of kicking me & everyone else off the echo who was
not a little ass kisser for you. ANYONE who you saw as a
threat was REMOVED from the echo. For a few weeks,
you were kicking about 2 or 3 people off every day. Messages
went from about 50 a day to 5 or 10 under YOUR leadership.

Basically, your leadership was a failure.

> Well, Mackey got to acting uppity and frisky and

>
> Simple.

Not that simple at all.

I attacked you several months later when you were doing the same thing
on THIS newsgroup. Remember, this is when YOU were attempting to become
moderator of THIS newsgroup. SEVERAL of us got on you to
preserve the integrity of this NG so you wouldn't do the same thing you
did on fidonet. You have never forgiven us for it & still harass when
you get a chance.

Would you like me to post a few messages from that time too
refresh your memory?

Yea & Ken tried to run in that election & you refused to let
the election continue with his name in it. I was also nominted
by TWO people for moderator & you did the same thing to me. So
you favorite got the election because you refused to let anyone
else who might have gotten it into the election.

You are a pathetic liar.

$12 seems a little high, I seem to remember paying somewhat less for one but your only alternative would be to buy one from a private party (or make a copy of theirs.) Radio Shack used to have a lot of info on their scanners at their Web site. If all else fails, ask for help on the news group if you're having trouble figuring something out. The Pro-51 isn't real complicated. Play with it a little and you can probably figure most of it out without the manual.

Excellent advice. This "do it yourself" type approach is what is needed rather than the "welfare enforcing" type of idea of "do this for me".

All,

I'm trying to figure out if any of the following have a mode to allow 30 or more khz of bandwidth to be used with WEFAX sat at 1691mhz!

AOR8000 R10 DJX10 Any others? I would like one that goes to 2gigs and I know that rules out the ICOM, but I don't think the icom does 30hkhz anyway.

Any help?

Thanks,
Alan Adamson

The idea behind the free market is that the seller is supposed to
convince the buyer that their product is superior to another. If the
product doesnt do that by itself, and it truly is superior, then the
seller needs to take extra measures to ensure that they do know

> Of course, what you're not saying is that it is illegal to
> import an "unblocked" AR8000 into the United States and both the overseas
> company and the buyer here are opening themselves to potential legal problems.
> All you're doing is misleading a potential buyer.
Not misleading, but supplying some additional information. But, I'm also
not telling them everything that they need to know because, in addition
to looking for a superior product, the buyer has incumbent responsibility
to make an informed decision. The next step after "Mr. Buyer" reads a
post from someone about buying scanners for less overseas should be for
him to write/fax/phone/email the vendor. It should say something like
"Dear Mr. Overseas Seller....Please answer these questions...... These
are an integral part of making an informed purchasing decision.
>
> Your misinformation does a disservice to the people like me selling an
> unblocked, fully programable AR8000 which you can't buy anymore here in the
> United States. It also hurts potential buyers because some potential buyers
> have no idea about price and look to others on these newsgroups for a reality
> check...which they're sure not going to get from you.

Like I said above, they're going to get a reality check. But, buyer
beware, its not an entire reality check. This is because he may already
know about overseas vendors, may not care, may not wish to conduct
business with someone from overseas. Whatever the reason. If he's going
to make an informed decision, he can drop me a line, send a email to
vendor like I said above, or he'll probably hear from somebody else on
this NG to help gather the rest of the information he needs to make an
informed decision.
> They see your
> misinformation posted and it confuses them...and they may miss the opportunity
> to buy a fine scanner which they can't buy here anymore...all because you told
> them they can buy it new for a couple of hundred dollars less elsewhere...
> which is misleading and pure BS.
Not a couple of hundred dollars, more like in the ballpark of a
hundred. Another piece of information they potential buyer would find
out if they took the time to query the overseas vendors, is that with
most, you get only the radio. No charger, no case, no powersupply.
Another "gotcha" is the customs fee that the USPS is going to charge you
when you get your radio. Probably in the neighborhood of 25-50 bucks.
Not a lot, but adds to the cost

> You're also encouraging potential buyers to break the law.
>
> This is not a moral issue, but it is a price issue AND a legal issue. It is

> posted here helps no one and could potentially hurt the buyer who
> thinks it's okay to buy overseas and import it...when it fact it's
> illegal to do so.
Your right, it is a legal issue. The potential buyer runs the risk of
having the radio seized. Another factor that has to be considered in
making an informed decision. You have to ask yourself if the radio gets
seized, can you afford the loss? This little fact goes into your
decision matrix, appropriately weighted to help you make your decision.
For me, it was an unacceptable risk. I just bought a new iCOM R-10, from
Maryland Radio, for $399 (iCOM is currently running a special for anyone
concerned, $100 off the R-10, dont know if it applies to any other
equipment. If your dealer doesnt know about, call Maryland Radio). I
couldn't afford to loose the $450 if it got seized. But, I was one that
made that determination after I gathered what I felt was an acceptable
amount of valid research.
>
> If you don't like the selling price of an item for sale here, then don't buy
> it. Keep your comments and misinformation to yourself...in simple language,
> you should mind your own business. Surely, you can find something more
> constructive to do with your life then to mislead people.
Bottom line is that a person cannot let their entire perception of
realit be defined what he/she reads in this NG. Granted, it is a great
place to gather some very good information. But it is not the panacea of

scanner information. Someone contenplating a scanner purchase should certainly come here for some information, but shouldn't let all those involved here make the buying decision for him/her. I'm trying to do that, dont want to do that, and someone shouldn't let me do that. I'm just trying to provide a data point.

I recently purchased a Radio Shack Pro-90 Scanner...
I am VERY interested in Military Communications...I live within 2 miles of Ft Hood Texas!
I was wondernig what would be a good choice? Should I choose a HF radio or a regular FM Scanner? The Pro-90 does no pick up the 200-500 military freqs. I was considering buying a Bearcat 895XLT or a 3000!
Any suggestions? Also I am looking for a good book on military radio communications (Like a Freq/How To Guide).
I was a Parachute Rigger in 1993...and all we used were the old 30-50 Mhz Field Radios and SINGARS Radios.
I would appreciate ANY information on this subject!
Thanks in advance!
[-Scanner-]

JM>> Same as how it "is NOT illegal to purchase non-FDA approved
JM>> drugs" overseas and bring them back in? Yeah ri--ght.....

JM>As long as they are not "RESTRICTED" drugs that is right. (You
JM>sure have a lot to learn)

Sorry John, but as long as the drug is legal in the country of origin, and is not for resale you can bring any drug into the U.S. Customs regulations do not forbid it. There are some Mexican doctors whose entire income is derived from writing scripts for drugs that are not legal in the U.S. It's a very frustrating problem for customs, but they can not stop it even though they are pretty sure that the drugs are going to be resold for illicit purposes.

The Optoelectronics Scout is more adapted for scanner use than just a
regular freq. counter
I can pick up the county police repeater up one mile away with the scout.
The scout can also
record 400 frequencies, so you can leave it running all day at the house,
and read the contents
later. the Scout has special algorithims for deciphering radio
transmissions, while rejecting
random noise and harmonics - no other freq counter has these capabilities.
I have nothing to
do with Optoelectronics - Except as a satisified customer:)

>Hmmm, I wonder, could they be the same.

They are exactly the same. I have given permission in the past for people to use information from my web pages, but always on condition that they give proper credit. There is no indication that SCANTRIX has permission from me or from anyone else whose information has been copied onto their website. Having someone's original copyright notice is not "credit". There isn't even that sort of attempt at acknowledgment where my handmade maps appear at SCANTRIX.

To the webmaster at SCANTRIX:

Please remove the maps that were lifted from the NF2G Scannist Pages. Permission to duplicate them on any other website is denied.

Thank you.

You may very well want to get a scanner that covers 225-400 MHz AM and then set up a search from 225 to 235 MHz. Listen for a "STAR____" callsign or two at just about anytime of the day. I'll leave it at that for now.

The idea behind the free market is that the seller is supposed to
convince the buyer that their product is superior to another. If the
product doesnt do that by itself, and it truly is superior, then the
seller needs to take extra measures to ensure that they do know

> Of course, what you're not saying is that it is illegal to
> import an "unblocked" AR8000 into the United States and both the overseas
> company and the buyer here are opening themselves to potential legal problems.
> All you're doing is misleading a potential buyer.
Not misleading, but supplying some additional information. But, I'm also
not telling them everything that they need to know because, in addition
to looking for a superior product, the buyer has incumbent responsibility
to make an informed decision. The next step after "Mr. Buyer" reads a
post from someone about buying scanners for less overseas should be for
him to write/fax/phone/email the vendor. It should say something like
"Dear Mr. Overseas Seller....Please answer these questions..... These
are an integral part of making an informed purchasing decision.
>
> Your misinformation does a disservice to the people like me selling an

> have no idea about price and look to others on these newsgroups for a reality
> check...which they're sure not going to get from you.

Like I said above, they're going to get a reality check. But, buyer
beware, its not an entire reality check. This is because he may already
know about overseas vendors, may not care, may not wish to conduct
business with someone from overseas. Whatever the reason. If he's going
to make an informed decision, he can drop me a line, send a email to
vendor like I said above, or he'll probably hear from somebody else on
this NG to help gather the rest of the information he needs to make an
informed decision.
> They see your
> misinformation posted and it confuses them...and they may miss the opportunity
> to buy a fine scanner which they can't buy here anymore...all because you told
> them they can buy it new for a couple of hundred dollars less elsewhere...
> which is misleading and pure BS.
Not a couple of hundred dollars, more like in the ballpark of a
hundred. Another piece of information they potential buyer would find
out if they took the time to query the overseas vendors, is that with
most, you get only the radio. No charger, no case, no powersupply.
Another "gotcha" is the customs fee that the USPS is going to charge you
when you get your radio. Probably in the neighborhood of 25-50 bucks.
Not a lot, but adds to the cost

> You're also encouraging potential buyers to break the law.
>
> This is not a moral issue, but it is a price issue AND a legal issue. It is

> posted here helps no one and could potentially hurt the buyer who
> thinks it's okay to buy overseas and import it...when it fact it's
> illegal to do so.
Your right, it is a legal issue. The potential buyer runs the risk of
having the radio seized. Another factor that has to be considered in
making an informed decision. You have to ask yourself if the radio gets
seized, can you afford the loss? This little fact goes into your
decision matrix, appropriately weighted to help you make your decision.
For me, it was an unacceptable risk. I just bought a new iCOM R-10, from
Maryland Radio, for $399 (iCOM is currently running a special for anyone
concerned, $100 off the R-10, dont know if it applies to any other
equipment. If your dealer doesnt know about, call Maryland Radio). I
couldn't afford to loose the $450 if it got seized. But, I was one that
made that determination after I gathered what I felt was an acceptable
amount of valid research.
>
> If you don't like the selling price of an item for sale here, then don't buy
> it. Keep your comments and misinformation to yourself...in simple language,
> you should mind your own business. Surely, you can find something more
> constructive to do with your life then to mislead people.
Bottom line is that a person cannot let their entire perception of
realit be defined what he/she reads in this NG. Granted, it is a great
place to gather some very good information. But it is not the panacea of

scanner information. Someone contenplating a scanner purchase should certainly come here for some information, but shouldn't let all those involved here make the buying decision for him/her. I'm trying to do that, dont want to do that, and someone shouldn't let me do that. I'm just trying to provide a data point.

I agree with Dan as well. I have found my Opto Scout to be invaluable assistance for scanning. YES, it is a nearfield device, but the range is completely dependent on transmitted power, type of anntenna used, etc.

I pick up police repeater transmissions over mile and a half a way, and it works real well for picking up low power HT'S for mall cops, security guards etc.

Don't compare the functionality of of the RS freq. counter with the Scout. Most freq. counters are used for on bench, close testing, or direct connect. The scout's express purpose is to detect and record freqs.

It works well and lives up to their advertisements. Chck out their web page. www.optoelectronics.com.

Keith
Happy Customer and no affliation to OPTO.

The BC 760XLT takes 12VDC, negative ground. If you go to R/S and get a 12VDC wall wart, be sure the positive power connector is on the center conducter of the coaxial power connector. (Bring the radio to the store, and be sure you get the right connector) You should get a power supply that produces 800 MA or better.

The newer BC760's have a BNC antenna connector, older ones have a Motorola connector. R/S also has antennas to fit these as well.

Depending on your location, a Back-of-set antenna may work fine, or you may need an outdor antenna,

From: BJC <bjc@mydesk.com>
Message-ID: <34A3E32F.DB6@mydesk.com>
Source record: 176132

Anyone know what will happen to the Metro Toronto (Ontario, Canada) Fire Depts radio systems when they become one next year. Since Scarborough, Etobicoke, etc. use trunked sytems and North York, etc do not, will they merge? Will it be one big trunked system (probably the easiest)?
I'm asking because one of my handhelds just died and I need to replace it. I'm considering a RS-Pro 60 (still available in Canada $350 Can) or the TrunkTracker ($500 Can) but if they don't go with trunking or don't use the Motorola system, I don't need to spend the extra $.

Thanks

I think I know why so many people have Radio Shack scanners. The Shack is the only nationwide electronics store with more than one or two scanners on display. Because of their many locations, there's a store near everyone; which means that we can drive to the mall, pick up and play with any of various scanners while comparing them to each other, then we can use our our 22% apr RS credit card to take home the scanner of our choice that very day (woe to us impulse buyers). Also, because the Shack is forever ingrained in the back of our minds as the place we think of when we need something more sophisticated than Wal Mart carries (multimeter, capacitors, etc.), this causes our subconscious to reason that RS products must be superior to those of other mass merchandisers. Alas, I have never found that to be the case, but somehow I keep buying their junk. At least I had enough sense to cancel my 22% RS credit card since my Visa charges only half that rate.

I wish there was somebody who could give RS some real head-to-head competition!

I've never heard of anyone being arrested for listening in to Cellular calls in the USA. Here in Canada you can listen in to Cellular/Emergency services whatever, but you can't a) tell anyone else what you have heard b) use the information for monetary gain.

With this in mind, nearly every tow-truck maggot on the road has a cab full of scanners listening in for the next accident. I've never heard of a maggot being busted for what I reckon is a clear breach of the law (item b).

The DOC (actually Ind. Can) is the same as the FCC in that it is a federal agency. I don't believe that the local contabulary is able to enforce federal laws. I suspect the same it true in the USA.

In my opinion, and others', you can listen to cellular phones until your ears fall off and nobody will arrest you.

This whole thing is being blown out of proportion!

Happy Channukah & Merry Xmas!

I used to wonder what it would be like to live in a country with an authoritarian government, one where its citizens had no freedoms or rights. I wondered how a country could get that way; would the government strip its people of all their freedoms at once, or would they do it one-by-one? I wondered if that country's media would fight for freedom, or would it be a shill for the government? I wondered if the majority of the people of that country even knew that they had no freedom? And I wondered even if they knew, did they care?

I wonder no more.

Actually charges were brought against a couple in Florida who
intercepted and revealed a conversation involving the
Speaker of the US House of Representatives.

GS0001 is the general business carriers ACARS flight number.
Also occasionally seen is GS1111.

AOL is like McDonald's. No one ever admits to eating there, but their sales continue to climb every year, regardless.

I have had several ISPs over the years, and none has been as reliable as AOL. Hard to believe, I know. I use an ISP to access AOL, in fact. AOL has a "bring your own ISP" for $9.95 (unlimited access); my current ISP charges me $9.95 per month (also unlimited access). So, for less than $20 a month, I get the best of both, with five AOL e-mail accounts to boot. For me, it's a good deal. If the service on my current ISP starts to go downhill, as they all seem to eventually do, I always have AOL to fall back on (that an two other accounts that I have as insurance!).

>Another "gotcha" is the customs fee that the USPS is going to charge you
>when you get your radio. Probably in the neighborhood of 25-50 bucks.
>Not a lot, but adds to the cost
Actually it depends. The Postal Service fee is $3 for the COD that is
the duty, and the customs fee is $5. Often the Post Office forgets to
collect the duty, in which case you just take the bill, attach your
check for the duty, and send it to Customs. As long as they get the
duty, they don't seem to care how they got it. The duty is a per
centage of the value, and it often isn't very much, probably 5-7% of
declared value.

If the goods are mailed via 'small packet' air, which is limited to 4
pounds or 2kg, it is not likely that any customs duty will be
assessed. These packages cannot be insured so the assumption is they
cannot be very valuable. Customs just passes them without examining
the declaration or anything else.. If customs doesn't assess the duty,
and the declaration was in order, that is a problem for US customs,
you have done nothing illegal or improper.

I am afraid that incorrect. Devices intended for Mobile (as in
vehicles) use are not subject to all of part 15, and devices designed
to operate outside the limits of part 15, such as cellular phones, and
diathermy machines are exempt. They may be covered elsewhere, but not
as part of part 15.

Is it possible to make a pager receive all pages at it's freq.???

I'm thinking that hooking dc power to run it (no on batt.) and
?? turning off/on ?? something inside to allow it to "hear" and
decode everything sent at it's freq.

possible? and then how about motorola's advisor pagers??

please post your thoughts (flames welcome)

Larry:

That's fairly close to the cellular band, so a cellular antenna would probably work fine! If you don't want to buy one, then just use it's dimensions as a guide. For receiving purposes, it will be close enough. If you want a directional beam antenna, check out the UHF T.V. antennas, but mount the elements vertically, instead of horizontally.

|
|Damn! What a sterling idea. I haven't had an A&W in years.
Unfortunately
|there are none near me. But I think a pilgrimage to the Dog 'n Suds in
|Grayslake is in order. I"ll be there Sunday Morning.
|
|See ya there.

I haven't seen a Dog 'n Suds in years. I thought they had all been bought
out.
At least in these parts. As for A&W, it's all over the place in the
stores.

2787. Pro-2042

HI

can anybody help me regarding parts for AOR scanners Model 2001 & 2002
need touch panel overlay for 2001 and pll chip no.upd2833 for the 2002.
Thanks MORT

2790. BC895XLT Modifiable?

Newsgroup: rec.radio.scanner
Date: 1997-12-26 00:00:00 UTC
From: venom600r@aol.com
Message-ID: <19971226001801.TAA13320@ladder01.news.aol.com>
Source record: 176242

Just purchased a Bearcat 895XLT and I was wondering if it is at all modifiable? I'm assuming that it's more electronically sophisticated than a normal scanner to enable trunk tracking so I doubt I'd just be able to snip a resistor or something. Although that would be nice. I've also checked out web sites before posting here but I couldn't find anything that pertained to modifying the 895. Any help appreciated.

Bret

all good and cautious post.

That is the way things are. I got screwed over by a repair dealer, Video Tech Services of Seattle, headed by Wayne Vokey. Others have had problems with this despicable (would like to use other words, but libel is still libel) character who is not a Canon authorized repair station, wh0 claims he he. He charged 400 to send my cam (two times tried to fix it, they claim) and then refuses to do it right the third time.

That is what a people need to know about VTS of Seattle.

He's never denied not taking my camera back...otherwise why would I post.

AS for Grove...what was stated was defrayed by over twenty who have had no problems with Bob Grove. So, 20 to 1.

I think people can see the facts. Plus the guy who posted the complaint did not tell the truth as pointed out by a few. That part of the attitude I would have to agree with your premise: why post negative about he who did get your problem fixed prior to posting what he did.

But that is more the character of the poster and nothing to do with Bob Grove.

Somone just looking at that one post and not reading the following support would get the wrong idea. But I think that is what forums are for. Even if wrong. In time the truth will be known.

Bob Grove never posted his side. I guess he figures that is part of the business. Cannot please all the people all the time.

>Can someone please give me a complete listing of cordless phones
>frequencies?
Paul, most postings into this newsgroups are from the USA. Every
country has its own band-plan. Like me, you are from New Zealand
where our frequency spectrum is quite different from that in the USA.
It is important you mention your location when requesting frequency
information in this newsgroups, otherwise you will very likely be
given frequencies not used in New Zealand - which two well-intentioned
people have already done in reply to your request.

Official cordless telephone frequencies in New Zealand are all listed
in the web site maintained by the Radio Frequency Service of the
Ministry of Commerce at http://203.97.170.9/rsm/specs.html (browse to
the document named RFS30 - Cordless Telephones February 1996)

Hope this helps, regards, Craig
abccpg@xtra.co.nz (remove abc for e-mail)

Bill Cheek wrote in response to my last posting:

>Awwwwwwwww.....bullllllllllllllsheeeeeeeeit. Opinions
>are like hind ends. Everybody has one and they all stink.
>You and Ralphie's bringing me into the Mackey shit was not
>an opinion....not even close. It was a horse's arse blasphemy.
>A brazen lie or an example of imbecilic idiocy......

Wrong. I didn't "bring you into" anything. I merely commented on what Ralph said. And, then, what you said. Never accused you of promoting the feud. However, based on previous observations, I am not surprised at your (over) reaction.

>Noooooooo, I didn't *start* with the adjectives. I just
>added a little flair and down to earth truth to the matter.
>For one thing, the Ralphie jerk is a fake.

What adjectives did I use to refer to you. Check it out: there aren't any. Ralph is as real as you (or anyone) in this "virtual" world. Heck, you could be Ralph, for all I know.

>You didn't disagree in any semblance of a civil manner. And
>I am not receptive to *any* but civil dealings. You got your
>code, Bunky. I got mine.

As I asked before, where is this perceived lack of civility? Point it out. This is the second time. Why don't you give me chapter and verse?

>Where does that insinuation come from? Your colon? It's
>about as far from constructive as it gets. I said nothing
>of being above the crowd. I did not talk to the crowd. I
>spoke to Ralphie, the fake, and you, the horse's arse. Two
>is not a crowd. Ralphie is a fake, so yes, I am above him.
>And you? You are an AOL'er, so........ draw your own inferences.

Which is shorter: Your memory or the list of people you haven't insulted? Check your last paragraph: you "are" superior because you don't use AOL (at least, you keep it a secret.) This kind of attitude winds all through your posts in this thread (and others.)

>Then be a man and don't open fire on me. Treat me EXACTLY like
>you want to be treated. And that is EXACTLY what you will get
>in return. Precisely.......+/- the molecular weight of hydrogen.

Nah, I already tried that and you have demonstrated time after time that you will not disagree in a civil manner. And, watch those assumptions . . .

>There you go again. We're not talking agreement, slick. We're
>talking your basic, foundational, elementary....lack of candor,
>or if not that, then a profound lack of essential savvy. I have
>no regard for lack of truth and I am not qualified to deal with
>the profound imbecile.

Again, point it out. You continue to make statements that you cannot prove or demonstrate. You seem to have a very confused and/or selective memory.

>And you will continue to be offered choices. Munch down on my
>shorts; observe the mistletoe on my shirttail by performing the
>customary liplock;......or....in your case......BOTH.

Nah, I already decided against it. Remember? . . .

>Your post was THE FACTS? And you wonder why I respect >you only
>slightly less than a tapeworm?

In your posts in this thread, you have demonstrated the EXACT behavior that I described.

>Go snivel to your Mammy and get some consolation, pal. And get
>some basic insight to the common tapeworm so's you can understand
>how I feel about you and anything you might have to squirt outa
>that hole in your lower lip.

Why is it that you ALWAYS think it necessary to hurl insults?? Don't you have anything to add to a discussion? Nothing substantive?

>An eye for an eye and a tooth for a tooth. I can't help it if
>you place little value on your eyes and teeth, Bunky. You choose
>your values for yourself..... I choose mine. And you are neither
>welcome nor invited to assist me in the selection of my values.
>And I dang sure don't want to meddle into your low-life, goody-two-
>shoe, pollyanna, happy-horseshit choices.

Values? It seems that you only value insults, name-calling and crotches/cracks!! And, yet another reference to "low", ie, beneath you.

>Oh that's cute. So now you display your bias and prejudice
>for certain dialects of certain races of certain parts of the
>country. Goodness.....next you'll be using racial epithets.

Nope, just got the feeling you thought you were addressing a slave and I wanted to humor you. YOU are the one who enjoys calling people names, not me. What does race have to do with this? For all you know, I may be black!! Are you??

>Just you and Ralphie. And well....it goes without saying, your neice.
>You know.....Johnna Mackey. But then Mackey is beneath everybody.
>Mackey was voted most popular bitch in Cell Block 19 at state prison
>a couple of years ago. So he or she is low. You and Ralphie are
>running a close second.........

But, YOU have NOTHING to do with JM . . .

>You sure profess to know all about my mirror. The funny thing
>is......is that I'm holding it in front of YOU, fecalbreath.
>You've been misled ..... major cognitive problems, sonny.

Nope, never been near you. No mirrors, no breath. You wear the air of superiority like a medal and it oozes from your posts. My mind works wonderfully well as you will see. Read on! BTW, your posts conjured up the "mirror" thing.

>Cool. I would not want to stop you from doing what you
>do best. I am just disappointed that your best doesn't come
>up to the level of the common urinary ant....but hey, if
>you're standing on your principles, then that's what you
>gotta do. But at least you could tell the truth.

More insults. The truth is there. Read it for yourself.

>Oh well, do whatever you want to do. The LAST thing I want
>is to STOP you. Geezus, man....can't you tell by NOW that
>I've been trying to START you?

<giggling in paroxysms of mirth, glee, and joy>

>....and in the process.....got you ALL wound up and strung
>out like a fiddle string playing high C.

><giggling some more...tapering off to a titter...>

Check the lengths of my posts as compared to you responses. (Of course, with the length of your respones my posts will naturally be longer in order to include your quotes.) Who has started who up?? Who is calling who names? Who resorted to insults? You do not recognize the truth when you read it. There lies the problem. And speaking of giggling, I have let you swing in the wind for over two days; you've posted eight times to this thread. Checked your goat lately? Hint: I had him for lunch.

>You're the AOL'er. You take great comfort in hinding behind
>the screen name. Talk about surrogates.... are you hiring out?

AOL'er?? The online service I subscribe to has nothing more to do with this than does the number of ISPs that you have. And, the one you seem to use most, san.rr.com, is REALLY popular. Must be a well kept secret, huh?

>Not me. You shit your pants trying to define Ralphie's name.
>I just wanted you to know that your ol' lady's name wasn't
>"Sweetie", either. You have a cognitive problem, Slick!

Nope, just told you what his name was (and wasn't). I knew what you wanted me to know, I was just trying to get a rise out of you. Looks like it worked. Read on!!

>Okay, your ol' man, then. Are you coming out of the
>closet, perchance?

A VERY predictable response. Once again you have assumed a fact that is not in evidence!!

>Test me. Find out.

EASY: Slap the sign on and show up.

>You don't understand. I told you you had cognitive difficulties.
>I don't know how much sweeter to say it. Go to your Mammy,
>your preacher, your boyfriends, or whatever and snivel to them
>that Billy Bad Ass done told you the bad word from the bad book.
>Which happens to be.....you lost your tickets and marbles with
>the first post you came on to me with.....and I really....what part
>of "REALLY" don't you understand....don't want to make any pretense
>of civility with you or Ralphie.

>You both blew it with your first posts. Any contracts and codes
>of civility were broken and in the breaking, you got told to eat
>my shorts. Don't you understand, in the vernacular, what that
>REALLY means? It means you are a zero. I have no contract of
>civility or anything else with you. You broke it. It ain't
>up to me to fix it.

Another one way street, huh? You don't have the ability/desire to honor a
contract or code and you have proved it with your continuous line of insults,
name calling, etc.
Go back and read BOTH of my previous posts to this thread. There is nothing
there that is not truthful or civil. You simply don't like what I said. And you
can't deal with the truth when it paints you as you are.

>But you sit there, all high and mighty....all huffed and puffed
>and affronted..... pretending surprise at how's come poor little ol'
>you got hosed for your time and trouble of trying to straighten me
>out. More's the pity because you need to attend to your own mess.
>But you can't see that.

WOW, didn't call me a name in that one! Congrats. Hosed? Nope, wrong again. I
trolled and you rose to the bait. Time after time. Affronted? My blood pressure
is low. Wanna compare readings??

>All you can see is my middle finger stuck up your left nostril,
>picking "fruit" for you to eat.

>Tough.

>You bought and paid for it, Dingleberry. The rest comes for free.

Well, that's SOME improvement: you finally got above the waist with one of your
insults.

>Ahhhhhhhh sooooooooo you're going to tell ME....WHAT I should say
>to someone else......and WHEN? And you wonder why I pick boogers
>outa your nose and feed 'em to you?

Nope, didn't tell you what to say. Just that you said too much. By the way,
you're still doing it. Anyone ever heard of an orfice fetish??

>How can I get across to you that I have absolutely no regard for
>your opinion of anything? How can I make that amply clear?
>English is my native language....and an area of my mastery, but
>apparently I am failing here.

>What part of "Eat my shorts" do you not understand?

Then why spend all this time on little ol' me? What part of "No thanks" don't
YOU understand?

>It has nothing to do with my "wants". There is a singular factor
>that determines how I am with others. It's how they are. If they
>come on to me civil and decent, then I am civil and decent, plus one,
>in return. That's my contract and my code. At least half of it.

Is this a New Year's resolution or what??

>The other half is that when I approach someone for the first time,
>or any time when there is a civil status quo....I will not be the
>first to break the contract.

Once again, about your memory . . .

>As it is, I enjoy pleasant, positive, upbeat relationships with
>a good number of people. So much so, that popinjays like yourself
>stand out in stark contrast to the pleasantries of Life...and it
>makes me thankful that I didn't have to find out about you the
>hard way after investing a lot of time, resources, and emotions in
>you.

But you keep investing time in me . . .

>Simply stated.....the good Lord made a lot of men outa flesh and
>blood and some outa shit.....and I done found out the easy way about
>you. So quit wondering and accusing me. You need to understand
>that YOU broke my civil code and since you can't see that and back
>off from it, then you have to be shown the mistletoe and skivvies
>the hard way.

Again, read my posts in this thread and recite those passages that prove what
you say. Well . . .
I have accused you of overreaction and overkill. And you proceeded to prove my
point. Thanks, but I really didn't need the help.

>Gawd, I've never had such a difficult time of telling someone
>before you pranced... in what "eat my shorts" means. And here
>you sachet around wanting to argue over disagreements. Geezus H.
>Kriste, man...get some savvy, will ya? And try to understand that you
>don't count in my books. You're a zero. Nada. Zilch.

Gees, I sure would hate to see your reaction if I DID count.

>There is nothing to argue about. I don't care if you think
>sugar stinks and shit's sweet. How can I tell you any plainer that
>I just plumb don't care what you think?

Is your memory long enough to recall the part about about overkill and overreaction?

>I have no desire to be nice or otherwise with you. Neither one
>counts. Neither one matters. Just try minding your own business
>and I'll attend to mine. Leave me outa yours, and I guarantee I'll
>leave you outa mine.

Holy smoke, this sounds like an olive branch. I am really flattered. I'll have to think about that one. You know, with my limited cognitive resources and all . . .

>I won't get any better than that.

>IS that so difficult to understand?

>OTOH....if you think this newsgroup ain't big enough for the both
>of us and you're going to take it upon yourself to run me off....
>then
> you
> will
> lose.

Never set out to "run you off". Wouldn't be the same without you. But, it could be better WITH you if you would cut out the 'dirty little kid' act. I don't view this as a competition to win or lose. I don't have anything at stake. But, from your words and tone, you must feel that not being able to get my goat would be a big defeat for you. Hint: I don't have a goat to get; your insults don't actually bother me because I don't exist except in this "virtual" place, as you put it.

And, I have said everything I have without calling you any names or hurling a string of childish insults at you. And, it seems that you are having a hard time dealing with that.

>Stuffing a sock in it and letting it be is as good as it will get.

>Hard to understand?

Now that really does sound like the offer of a truce. Hmmm, I must be doing pretty good after all . . .

Tell you what, ol' LJR may take a few more days off to think about it. If you never hear from me again . . .

It's really been fun. I have never gotten such an overwhelming reaction from anyone. At least, not on a NG!! We probably have a lot in common. Oh my God, did I say that?

Your Very Best AOL Buddy,

LJR

++
For your perusal, reference and convenience:

My first post to this thread:

Subject: Re: obnoxious feud - ENOUGH!
From: ljrockford@aol.com (LJRockford)
Date: Tue, Dec 23, 1997 02:12 EST
Message-id: <19971223071201.CAA16218@ladder01.news.aol.com>

It is unfortunate that someone can have such a mastery of scanners and electronics and be so lacking in the ability to communicate with others, who do not agree with him, without resorting to insults and talk of genitals, feces, underwear, etc.
Especially when there is absolutely nothing to be gained by doing so.

LJR

PS The original poster's name is Ralph. It is not Bubba, pal or Ralpho.

Somehow, a "kick me" sign seems more appropriate that the mistletoe. Why not give it a try? The results would be surer, swifter and more to the point!!!

My second post, my words only:

Subject: Re: obnoxious feud - ENOUGH!
From: ljrockford@aol.com (LJRockford)
Date: Tue, Dec 23, 1997 12:33 EST
Message-id: <19971223173300.MAA16452@ladder02.news.aol.com>

Sure it was. You DISAGREED with his opinion on the mater and started calling him names, just as you did when I DISAGREED with you Whatsamatter Mr. Cheek, do you have the warped opinion that being a good "namecaller" somehow elevates you above the crowd? Low indeed. Get back down to earth and be a man and quit the childish name calling and hurling of insults.
And, the "opened fire" reference is a perfect example of your tendency to overreaction and overkill.

Quotes deleted.

Oh, I see: If it not something you agree with, it is excrement. Why should you expect to be elevated to such a level so as to be immune from challenge or disagreement? And, I will leave the
"slither"-ing to you.

Quotes deleted.

Where is this supposed lack of civility? Point it out. Not a SINGLE uncivil word was spoken by me. NOT ONE. Just the facts, nothing more. No, I did not call you a series of silly names or insult you, thus, I did not get what I gave. You are a firm believer in overkill, aren't you Mr. Cheek?

Quotes deleted.

Well, thank you Masa Cheek I sho' do 'preciate yo' hi' praise!!
And, I'll bet all the others out there who are 'beneath you' would also.
"Pompous", indeed! You may be the only person I know of who looks in the mirror and perceives his head to be wider than his shoulders.

Quotes deleted.

You were not called anything at all. You and JM were said to have a "sophmoric feud", no names, no insults, NO lack of civility. But, obviously, you disagreed with the poster's opinion and proceded to blast away with your typical Ralpho, Bubba, snotwad, *nut, etc line. You will not stop me from disagreeing with you by calling me names or insulting me. It will not happen. When it comes to principles, I will not be swayed by you or your AOL surrogate.

Quotes deleted.

Never said it was. However, for some reason, it does seem more appropriate that way. Goes well with the "kick me" sign.

Quotes deleted.

And, it is yours to define?
What ol' lady? You have assumed a fact that is not in evidence.

Quotes deleted.

DO NOT make the mistake of giving me the opportunity.
The real question is: Are YOU capable of surviving it??

Quotes deleted.

Another perfect example of you unwillingness (inability??) to communicate, in a civil manner, with someone who disagrees with you. And, we do disagree (even though you didn't get it before.)

However, I will give you this: As a rule, you do not respond to JM. Which would have been quite enough for you to say originally. But, you didn't and, thus, we disagree. And, if you can decide how to refer to others (Ralpho, etc), then I can decide to disagree. It's very simple: you do what you want, I do what I want.
We don't agree, we say so. Hopefully on a civil level, if you think you are up to it.

But, I doubt it. I have seen your posts flaming others who disagreed with you and I believe you incapable of discourse on any level close to civility when challenged. Oh you can be really helpful. And even nice, when you want to be. But, I guess there's just too much chip-on-the-shoulder frustration pent up inside you for any niceties to escape on a regular basis.

Too bad.

One more comment that is often overlooked - your typical microwave oven already leaks about 1/2 to 1 watt of RF around all six sides. The general public seems comfortable with the use of microwave ovens for the last two decades, in spite of their leakage (which used to be worse).

Sir,

You are correct. I did over generalize. I should have said what worthless pricks "some" are. I apologize to those who should not have been included. I, too, am tired of the repetitive questions regarding cordless, cellphones etc. That's why I ignore them. Still, I'm grateful that when I was a clueless newbie (not that long ago) the experts took pity on me, and answered my questions, probably for the 100th time.
You want to see inane questions? You should see some of the letters PopComm readers send in. I once had someone ask me to send him "all the information I had on scanning and frequencies."
I responded that I would be happy to do so, as soon as he sent an 18-wheeler to pick it all up.
As for this particular questioner, I tried to be as helpful as I could, giving the general federal frequency ranges, and suggesting some reference material (such as Police Call Plus) where the questioner could look for details himself. You didn't see my reply because I sent it via private e-mail.
Again, I apologize to those who should not have been included in my overly broad generalization.

John

Your best bet, regardless of what Coast Guard station, is to simply listen to channels 22 and 16 on the standard marine bands. The Coast Guard uses those two frequencies nationwide, almost exclusively. Therefore, Detroit, Marblehead, Lorain, Cleveland, Buffalo Coast Guard stations also use the same ones - 22 and 16. Even the Canadian Coast Guard (at Sarnia, across Lake Erie) uses the same channels.

They are NFM of course.

Ch. 16 - 156.800
Ch. 22 - 157.100

>
> The last line indicates that Bill Cheek regularly checks into AOL so
> he would have to have an AOL account!

Ha ha ha ha ha ha ha ha ha.....Whooooooooeeeeeeeeyyyyyy! I can't believe it! I am THAT important to you that you slink all over the 'Net looking for me? Ha ha ha ha ha ha ha.....

Ummmmmmmmm, joke's on you, Mack. heh heh heh.....

What you didn't know and what I didn't say in that post because it served no useful purpose to say it, was that I posted the above on behalf of a client who DOES have a Pentium 200, Win95 (OSR2) and an AOL account.....NONE OF WHICH I OWN OR USE.....

What else you don't know is that I am a computer guru off in a different world unconnected with our dear hobby of radio.....but anyway.....

ha ha ha ha ha ha ha..... I've got an AMD K6/233 and some
Pentium Pro's and then a Pentium 90 and 60, but no P200's. All
my operating systems are either Win95a or Win NT 4.0-sp3, but not
OSR2. In fact, I don't use Outlook 97 anymore but unfortunately, I
am not at liberty (NDA) to disclose what I do use. Maybe in a couple
of months when the beta is over, but not now.

And lastly....no AOL.

It makes no difference....other than you jumped like stink on shit
on what you thought was my undoing......but you shoulda oughta done
some checking up first.

Now you are more of a horse's ass than ever, you dumbshit. <snicker>

But I'll tell what I will do, this being Christmas and all, and me
being in a good mood, I won't immediately slap you back on my Shit List
and will be happy to discuss this idiotic conclusion of yours until the
cows come home, if you want, and if it makes you happy. But first time
you deviate from the subject....or deviate period, it's back on the
List you go.

But if I were you, I'd tuck my tail betwixt my legs and RUN... you
gonna lose this one, big time, Mackey. You done barked up the
wrong tree and got yourself a skunk by the arse in your jaws.

But then maybe you are a masochist and like that stuff on your lips?

Howdy Folks!

i have known about this newsgroup for approx. 47 seconds, but it seemed like a good place to start for info. i haven't been involved with scanning for over a year, when my Cobra (16 Ch., 11 band) base station - which i was quite pleased with, but i'm pretty sure they've discountined making scanners (right?) - went the way of the junk pile. Now i've got some Christ mas jack and i want to get back into the hobby. In the past i've done all my business with Scanner World in Albany, NY. i'm not sure if i want a base station again, or if i want to try for a handheld. The important point is i don't want to spend two hundred bucks, but i do want the 800mHz band. If you can suggest a merchant and/or a radio model, or just want to make some suggestions please e-mail me directly. Thanks again.

frank

> freqs. I was considering buying a Bearcat 895XLT or a 3000!

For Ft. Hood specifically, I don't think the lack of 225-400MHz capability will be a major annoyance, as the Army has always tended to prefer the 30-87.975MHz ('Fox-Mike') and 118-151MHz ('Victor') bands for aviation platforms.

But certainly a broad-band receiver, covering about 30MHz-1GHz would be the best. Another factor is that you'll want a high channel capacity (by high, I mean 400+ channels).

If you can't afford both at once, maybe just use your PRO-90 to monitor the local Ft. Hood stuff, and get a HF/SSB receiver to monitor the stuff on HF. Or, get a good VHF/UHF base scanner, get proficient with monitoring the local military & area 225-400MHz military aviation stuff while you save up for a good HF radio.

> Any suggestions? Also I am looking for a good book on military radio
> communications (Like a Freq/How To Guide).

IMHO, you're better off getting info first-hand, as a lot of the military comms monitoring hobbyist books & magazine articles out are full of misinformation.

Do some monitoring over a period of time, THINK about what you hear. Eventually, a lot of it should make sense. For things that don't, ask about 'em here in this forum. That way, you'll at least get a bunch of different answers (subject to correction/debate by others, unlike with the books/magazines -- which is why some of those authors deliberately don't grace us with their opinions & info here on Usenet, or the Internet mailing lists) & sort out the truth on your own, rather than paying the $$ for a subscription and relying on one or two poor, published sources. You'll also want to network with other individuals in your area who've developed first-hand info on Ft. Hood comms. Another great intel source is to go to base open houses, and look inside the aircraft for freq/channel charts. As more & more of the aircraft get newer radio gear, the little paper freq lists are a thing of the past, because many of the new radios have little CRT displays that list that same info, and of course it doesn't show up when the radio is powered down...

But the old UH-1 with the old F-M/Victor/Uniform radios should have the paper lists, giving the same channel #/frequency/channel use info that is programmed into the newer radio on the UH-60 or AH-64 (though they might have SINCGARS, while a standard UH-1 might not).

> I was a Parachute Rigger in 1993...and all we used were the old
> 30-50 Mhz Field Radios and SINGARS Radios.

The older 30-88MHz rigs are still in use, but SINCGARS is out there a lot more than it was in your day. Mobile Subscriber Equipment (which also mostly uses 30-88 spread-spectrum) is probably used a lot for the exercises at Hood. Near Vertical Incidence Skywave on HF and secure UHF TACSAT using Demand Assigned Multiple Access waveforms are other Army field communications systems that have increased in use a little since '93.

Naw, John, we know that you NEVER lie, so we'll take your word for it! When you're not flaming and causing trouble, would explain to me what CTCSS does? In an earlier post, you said it was a "nice accessory to have." What did you mean exactly? I mean, do you wear it with your purple pumps, matching purse and mink stole?

I have also a panasonic KX- ???? series that has a secure guard.
I tested with my seceral receives and I confirmed that the phone
scrambled the audio. When someone tunes into the frequency that
you are using, he can only hear lousy white noises and nothing more.
DTMF tones are also scrambled and he isn't able to hear the tones at
all. I doubt there are signal decoders for panasonic model at
present. But make sure your secure guard mode is turned on.
If the mode is off, then your phone is just same as other cordlesses
and everyone can hear what you say...

>Also, can anybody tell me why it makes a weird ringing
>every once in a while, like someone is calling, but no one
>is there. Am I picking up someone else cordless in my

It happened to me with some cheap cordless telephones before... but
not panasonic ones. maybe you are getting some intereference from
neighbours.

I used to be a member of a scanner group in the South Bay called BASE (Bay Area Scanner Enthusiasts - no relation to The Base Station). As far as I know, it folded a couple years ago. Any confirmation of this?

BTW, I've found both the regional frequency and scanning guides put out by Art at The Base Station and the Government Radio Systems book by Mobile Radio Resources (sold there too) to be very helpful.

In article , Doug Smith <nospam@dougweb.com> wrote:

```
For sale Radio Shack Pro-46 scanner.
100 channels
Date Code 7A3
Has full 800 Mhz coverage

Good little scanner in good condition.
Price: $150.00 plus shipping.
If interested email mhaynes@aristotle.net
```

"Deviousness"? You've got to be kidding! It was very straight-
forward why Mackey got himself evicted from the FidoNet SCANRADIO
forum. He failed to obey the rules, not once, not twice, but
three times. The third time was the charm.

The situation was not unique. It happened hundreds of times
throughout FidoNet's history. I got booted off a couple of
forums myself. It's no big deal. FidoNet forums aren't like
newsgroups. They're moderated and each forum is the "possession"
or property of the moderator.\\

It's not as bad as it sounds... While each Fido forum is
the rightful property of the Moderator, it is also possible
for anyone to start their own forum. Mackey could have started
one for himself to compete with mine, if mine were so "awful".

But he didn't....for whatever reasons. He *didn't*, and that is
what counts.

> but doesn't realize that the past is over and nobody cares

> individuals; what they like most is being told to desist, so that they
> can really unload their rage.

It's not rage. It's simple, though. *You* open your jaws thinking
you have some kind of monopoly on truth and freedom of speech. You
don't. And you really don;t have any solid picture other than the

one in your own mind. It may be valid to you, but when you open up and spew.....well.....it just might come back to paste you in the chops. That's the part you don't like.

You seem to have a proclivity for "dishing it out" and an unmitigated gall to not "take it". Got news for ya, pal.......

:-)

You *will* take it.

> The other element present in these wars is a form of Schadenfreude.
> Most people who jump in to object to the hostilities might have
> subconcious intent of the opposite. It's easy to identify and avoid the
> deeply scatological threads. An appeal to reason, let alone civility, in
> these is pointless.

Why don't you avoid the threads you don't like? The answer is clear. You *like* them. There can be no other answer, because there is no way under the sun, Jose', that you're capable of being a newsgroup messiah.

Open fire all you want. And then duck and run like hell if you don't like what comes back to you.

<shrug>

Like it or lump it.

2829. Correction to: Icom PCR-1000 Commands: The List So Far

Newsgroup: rec.radio.scanner
Date: 1997-12-27 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <350a4725.590847443@nntp.atlanta.com>
Source record: 176025
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc

I see I made an error in explaining the frequency setting
command of the PCR-1000. The correction version of the full command
list will have this corrected, but here's the deal.

I left out the trailing '00' on the command. This is
obviously a parameter of some kind, but I'm not sure what it does.
The control software always seems to send a '00' here, and that works.
I haven't tried other values to see what the impact might be.

Thanks to the folks who found this who tried it, found it
didn't work, and asked me why.

Frequency K0fffffffffmmFFXX
fffffffff is frequency
mm is mode
00 = LSB
01 = USB
02 = AM
03 = CW
04 = (possible RTTY? Nothing sets this value)
05 = NFM
06 = WFM
FF is filter
00 = 3K
01 = 6K
02 = 15K
03 = 50K
04 = 230K
XX is an unknown function but is always '00'
00 = ?

I am looking to buy a friend a weather radio, need help finding one. I've heard there are radios which will continually monitor NOAA frequencies and then turn on the audio when NOAA broadcasts the 1000Hz emergency tone.

Can anyone direct me to a brand and model and perhaps where it can be bought?

Thanks,
Vic

GB> Will be riding the Amtrak soon from San Francisco to Denver. Plan to
GB> bring my handheld scanner along. What frequencies should I program in
GB> to listen to train communications, dispatch, etc.?

I have the Terminal Services listed as 452.900
The Oakland(train actualy leaves from Oakland) Car Dept is listed as 160.440
The "on Board Manager west of chicago is listed as 160.305
Have no listings for the Denver end of that trip.
Other freqencies will be in use but would depend on whose tracks they are
using.

And I think you will find the same true of the Scout Unit. Rembember that One Mile range is for a 50 to 100 Watt Base station Repeater. Anmd in a fairlly quite RF area. Most big cities will overload Frequencies with Hits and make then basicly useless.

Radio Shack has several models available. The newest decodes the
digtal data and displays the message for the county code you preset.
It's about $80 as I recall. Other models go for as little as about $25
on sale.

Recently someone spied a new service code on some of the FCC database records.
It looks like the government is trying to consolidate radio codes.

Radio service codes IG (Conventional -- Industrial/Business Pool) and YG
(Trunked -- Industrial/Business Pool) consolidate and replace the following
radio service codes.

Industrial Radio Services:
IB - Business
IF - Forest Products
IP - Petroleum
IS - Special Industrial
IT - Telephone Maintenance
IV - Film and Video Production
IW - Power
IX - Manufacturers
IY - Relay Press

Land Transportation Radio Services:

LA - Automobile Emergency
LI - Interurban Passenger
LJ - Interurban Property
LR - Railroad
LU - Urban Passenger
LV - Urban Property
LX - Taxicab

Radio service codes PW (Conventional -- Public Safety Pool) and YW (Trunked --
Public Safety Pool) consolidate and replace the following radio service codes.

Public Safety Services:
PF - Fire
PH - Highway Maintenance
PL - Local Government
PM - Emergency Medical
PO - Forestry Conservation
PP - Police
PS - Special Emergency

This info was obtained from:
http://www.fcc.gov/Daily_Releases/Daily_Business/1997/db971020/da972216.html

Simple! Radio Shack. They have a bunch.

"Alert" models start at $30.

If you live in an area with frequent alerts, you may wish to
consider the top-end model with the "SAME" alert feature. "SAME"
is a digital code that is broadcast so that you will only hear
alerts for your area.

Look on page 229 of the `98 catalog, or take a browse to:

http://support.tandy.com/support_audio/3152.htm

Read about the weather radio system directly from the "horses"
mouth:

Happy Holidays Everbody,

Over the last few months we have massively increased the materials
available on our website regarding TSCM equipment, techniques, and
training. We curently have just over 484 web page dedicated to TSCM
equipment and technical security issues on line (just over 6000 printed
pages of materials).

I would like to get a few of you to visit the site and email us with any
comments or observations regarding the following equipment pages.

Our main test equipment page may be found at:

http://www.tscm.com/tmde.html

The pages on the new types of analysers being used by TSCM industry
seems to be very popular, let me know if there is an analyser that
you feel should be included.

http://www.tscm.com/tmdespect.html
http://www.tscm.com/tmdevsa.html

These are the reviews of various TSCM training programs, and schools.
If you have attended any of these and would like share your experiences
then please email. Of particular interest are your experiences with the
various civilian TSCM schools. Also, if anybody has attened the Ross
Engineering program please let me know about your experience.

http://www.tscm.com/training.html

I live is west cobb and I just got one also for christmas, you don't
need to put in the fleet codes for cobb, just program the 15 freqs and
hit trunk it will do it's thing.....you will then see the correct codes
like.... 976 cobb PD zone 1 3663 kennesaw PD ect...

i haven't tried the atlanta stuff yet, if i do i will let you know..

Years ago, I spent some time in Mannheim, Germany. Right outside of town, they had an A&W that as far as I could tell was just like the ones stateside, down to the at-your-car service. One big difference, however, was that you could buy drive up and buy huge mugs of beer (the real stuff). No carding, no questions asked. Imagine that: Drive up, get drunk and drive away. Was that insane or what?

I just bought a Sony 900 MHz digital spread spectrum
cordless phone... it operates between 902 and 928 MHz

Is there anyway this phone can be scanned?

curious,
Brad

Hi,

I recently built the decoder circut that uses the 741 Op-AMp. I was unable to get it working. I am very fustrated at this point, and would like to know of any commercially available versions.

BTW- I know MFJ's 1213 works, but not with a discrim. output put, b/c it is designed for a headphone jack.

Thanks Very much in advance

-Adam

Brad,

While it would be technically possible, it would be very difficult. Your conversation is split up over several frequencis. Some radios use frequency hopping, while others use theseveral frequencies at the same time. To listen in to a conversation, you would need to know all of the frequencies, and be able to put the resulting fragments back together in the correct sequence.
I think you are about as safe as you can be, with this radio.

One question though. I had a Uniden spread spectrum phone a while back. It had good clarity, but it also had an annoying echo. It was faint, but it was always there. I finally returned it. How is the performance of your Sony?

I just purchased the same scanner and experienced the same annoying problem. It got so bad that I opened the back cover and found a pot. that was just below the squelch control. By adjusting that pot., I was able to decrease the squelch tail. It is much better, but not as good as I would like it. I will probably adjust it again. Remember that if you adjust it to much, you will cut out all of your reception.

2883. TrunkTracker newbie in Georgia needs help

Newsgroup: rec.radio.scanner
Date: 1997-12-27 00:00:00 UTC
From: ralphc@bellsouth.net
Message-ID: <34a45ac6.7602204@news.atl.bellsouth.net>
Source record: 176084

I got my wife the BC235XLT for Christmas and I've been trying to get it to do the ol' trunking thing. We went to www.trunktracker.com and got frequencies and fleet maps etc.
We live in Kennesaw, which is NW of Atlanta. After reading the directions and putting in frequencies and fleet map information, we're able to pick up Cobb County (the county we're in) but not Atlanta. Cobb County has a "standard" fleet map, Atlanta had a user-programmable fleet map. We've picked up non-trunked frequencies from Atlanta before.

Is the range on the 800mhz-type trunked frequencies not as far as other scanner frequencies? Could the fleet map codes have changed recently, or is it a big deal to do something like that?

Also, when trunk scanning in Cobb County (a type II-i system), the numbers appearing on the scanner are like 000-1, 000-2, 000-13, etc. According to the info from www.trunktracker.com, the numbers look like 2096, 1360, etc. and nothing like 000-. Am I looking at a wrong thing somehow?

Thanks

OK, I got bored and decided I needed to write a tutorial on
how to use TRUNKER.EXE. If you've used this program and know anything
about it, *please* take a look at this (remember, it may keep a newbie
out of *your* inbox).

If you want to use this program, read this and see if it makes
any sense. If you still can't figure out what you're doing, figure
out what you're doing, and tell me why it didn't help.

If you have or haven't used this program, but feel you're a
general know-it-all, make sure you know what you're talking about,
then tell me how I should change the tutorial.

If you don't fall into any of the above categories, why are
you reading this message at all, anyway?

- Chris, KD4DTS

How to use this stuff
John "Chris" Wren, KD4DTS
jcwren@atlanta.com
12/26/97
Version 1.00

In looking at the documentation provided with TRUNKER, I've
noticed that it's rather scarce, and there's a lot of implied
knowledge. Perhaps with this document, we can remedy at least a
little of that.

If you are a learned soul, and find some deficencies, or know
a better way to do something, please, e-mail me and I'll incorporate
it into the next version of this document.

What does this thing do?

TRUNKER is program that allows a person with two scanners and
a device called a "data slicer" to follow traffic on a trunked radio
system. It's useful for listening to what the police, fire/EMS teams,
water works, and whatever other groups using the system are up to.
Hear your tax dollars at work ("Unit 54, be advised that complainent
says the neighbors cat has been meowing too loudly. Dispatching 3
additional units, signal 32, TAC 3").

What's a trunking system, how does it work?

Trunking systems seem to be implemented typically at the
county level. Where I live, the system has the county police

department, several city departments, fire/EMS teams, animal control, the water works, Parks & Recreation services, and some various other county level functions.

Each service is assigned to a group. As far as I know, unless there is an equivalent of changing channels, each group can only talk to members of their own group. This prevents the water works guys from yakking at the fire/EMS teams. There are also certain groups that all radios respond to, such as "All county". Through some system, users are able to talk to specific other users, rather than the whole group. I don't know if individuals can talk to individuals outside of their own group or not. I imagine the system is pretty flexible, and can acommodate this somehow.

A trunking system is a radio system that has a minimum of 2 frequencies, and usually more. One channel, at any given time, is a control channel. This channel contains digitally encoded data that specifies which of the other channels in the system currently have conversations on them, which frequency to use next, etc. This data channel often rotates between up to 4 frequencies (used to "normalize" transmitter wear, I guess).

(This part I'm unsure of). For every output frequency the county, there are a corresponding number of input frequencies. Output frequencies are in the 854-858 in my county, and the inputs are somewhere down around 814-818.

When a user keys down, the trunking system controller selects an output channel for that transmission, and repeats what it hears from the input on the output frequency. The control channel notifies other radios that the input frequency is in use, and if they need to transmit, what other input frequency to use.

The above is somewhat simplified, and certainly contains some omissions. Someone who *really* knows about trunked systems should fix this.

What do I need?

To really do this right, you'll need either an AR8000 scanner, or a scanner capable of being controlled by a computer (AR3000, R7000, PCR1000, AR2700, etc), and a radio capable of monitor 800mhz with discrimator out (such as a Yaesu 8100, or many other "packet ready" radios). You'll also need a data slicer.

A data slicer is nothing more than a device that takes the discriminator audio in, amplifies the heck out of it so it looks like a square wave, then converts it to RS-232 levels. You should be able to build one of these in about 1/2 an hour if you're adept with a soldering iron and know which end of a diode is which. There are also some commercial ones from MFJ, WeFax, and a few other manufacturers.

You'll need the computer controlled scanner to listen to the audio on the output frequencies. The other radio listens to the control channel, and the data from the discriminator out goes to the data slicer. The data slicer squares up the signal, and sends it to the PC via the Clear-To-Send pin on the serial port.

The software decodes the data coming in from the data slicer, and commands the computer controlled scanner to change frequency. The software supports a prioritization scheme that allows you, the user, to assign a priority to each group. As an example, I set the "All County" group to be highest, because usually anything sent to the entire county is of some interest. The water works people are set to the lowest, because, frankly, these are some of the dumbest people to ever squeeze a microphone key. My nearest city police are set to the second highest priority, because they're closest to me. If some junkie is running loose with a gun near my house, I want to know about it (how else to justify an Uzi with a silencer and night vision equipment to the wife?).

How do I find the trunking system?

Look for tall towers. No, seriously, there are a couple of excellent websites that contain lists by state and county of what frequencies are used, what groups are assigned to whom, etc. The two I really like are:

http://web2.airmail.net/lblant1/trunked.htm
http://members.aol.com/wwhitby2/trs.html

Another method is tune through the 800 mhz band, starting around 849 megahertz or so. Set the step for 12.5Khz. The problem here is that if you have to resort to searching like this, you're likely not to know what to listen for. A couple of hints: If you have the decoder software running while you're doing this, when you hit the control channel, you'll suddenly see frequencies appearing on the screen, and a SysId come up. A control channel sounds like a surging buzz. It will also stay up continously. If you know what pager data sounds likes, it doesn't sound like that.

Maybe someone will record a few seconds of it and post it as a .WAV file so you can see what you're looking for. This might also be a good way to provide a test setup so you'll have known constants when putting everything together.

What kind of computer do I need?

This is a good question. Experience shows that it runs on an AMD 5x86-133 in a DOS box under Windows-95 without any problem. It also will run but miss data on a 486-25 laptop under DOS only. Other people says that under Windows-3.11, don't even bother. I have an NT system here, but as of 12/26/97, I haven't tried it yet.

The program supports an accuracy counter, expressed in percentage. This indicates with what degree of success it decodes

packets. On the 5x86-133 system, I get 95 to 97% accuracy, with fairly poor reception (major fluctuation between S1 and S3 on my Yaesu 8100, for folks who know what this means).

How do I get the software running?

The software is not complicated to get running, particularly if you know that your hardware is already functional. If you've just built your own slicer, and don't know if it's working or not, well, that's beyond the scope of this document (so far).

The first thing to so is either boot a machine to a DOS prompt, or under Windows-95, open a DOS box. Make it full screen (using the ALT-ENTER key sequence) to make it easier to read, for now.

At the DOS prompt, you'll need to set several environment variables. Don't panic! It isn't voodoo. It's just a easier way for the lazy programmer (that's me) to avoid writing code to parse command line arguments.

Environment variables are nothing more than strings of text stored in an internal area of DOS (for those of us that really know how the variables work, leave it alone. We're trying to get this person running, not teach them DOS internals!). Every time you set a PATH statement (like the one in your AUTOEXEC.BAT), or change your PROMPT string, you're changing an environment variable. See? Nothing to it...

To select the type of scanner you have, at the DOS prompt, type:

SET TRACKSCAN=R7000

Now, if you don't have an R7000, use the type of your scanner here. (You can type TRUNKER ?) to see a list of supported scanners. It's being taught about more all the time). So, if you had a AR8000, you'd type

SET TRACKSCAN=AR8000

You get the idea, I'm sure. Now, you'll need to set a variable to tell the program what COM port you have the scanner connected to (you've connected the scanner, haven't you? If you don't, this will never work. And, if you don't know how to connect your scanner to the serial port, well, post a question to USENET. I can't explain that to you.).

SET TRACKSCANPORT=COM1

If you plugged your scanner into COM2, then substitute COM2 for COM1 in the line above. The same is true for COM3 or COM4 (for those of you who know enough to know what this means: If you're not using an 8250 COM port, or your multiport serial card doesn't emulate

one, it won't work. You have to have an 8250, 16450, or 16550 type COM port).

Now we'll need to tell the program where your data slicer is. Same kind of stuff here.

SET TRACKSLICERPORT=COM2

Again, if this isn't the COM port it's one, use the correct one.

The next variable you'll have to either already know, or perform an experiment to find out the correct value. The audio out of some radios is inverted (you be able to tell this because everything will sound upside down. Heh heh heh. Just kidding! But seriously folks...)

SET TRACKSLICERMODE=NORMAL

At this point, you'll need to tune the radio that you're going to monitor the control channel with to an active control channel. If you don't know what one sounds like, read whatever I wrote near the top on finding out how to figure this out. You should know this by this point in the process).

Start the program by typing:

TRUNKER

If the program comes up and you start seeing a list of frequencies displayed on the screen, and the SysID field in the upper left hand corner has a number other than 1234, you're OK. If not, trying quitting the program (use the 'Q' key), then type:

SET TRACKSLICERMODE=INVERT

This tells the program that your radio/slicer combination is inverting the data, and needs to be set right. Start the program again with:

TRUNKER

Hopefully now you'll start seeing data appear and a SysID number other than 1234 come up in the corner. If it doesn't, you've got a problem that I can't help you with. Post a question to alt.radio.scanner, and ask for help. There's a bunch of great people there, and you'll probably get more replies than you ever expected.

If you saw control channel data appearing, but the scanner you have connected to the serial port isn't changing to the frequency with the asterick beside it, you're halfway there. This indicates your control channel radio/slicer combination is working, but either the monitoring scanner isn't in the correct mode, or the interface to the scanner has a problem.

Check the dumb things first. Many people make the mistake with the AR8000 scanner of having it in CR/LF mode, instead of CR mode. I have no idea how to change this, 'cause I don't own one, but I hear people talking about it all the time.

If you have something like a R7000 or R7100, check the baud rates. The factory default is 1200, but the program defaults to 9600. You can override the default baud rates by typing:

SET TRACKSCANBAUD=1200

If you don't use 1200, you can use 300, 1200, 2400, 4800, 9600, 19200, 38400, or 57600. The R7x00's are tricky, because besides trial and error, the only way to know what they're set to is to open them up and look at the switches.

If you built an interface, try figuring out another way to verify the hardware. No doubt you can find a control program on the 'net that will support whatever radio you have.

If you know the hardware works, make sure you don't have some kind of COM port conflict. Remember that using standard COM port and IRQ mappings, you can't use COM1 and COM3, or COM2 and COM4 at the same time. This is because they share the interrupt, and most (not all) systems are not smart enough to know how to "share" interrupts.

Try just using COM1 and COM2, if you can. That's nice and generic, and very safe. Put the slicer on COM1, the scanner on COM2, and set the environment variables TRACKSCANPORT and TRACKSLICERPORT accordingly. If you can, plug another PC in the serial port the scanner should be connected to, and see if you see any data coming off it. Remember that you'll need a null modem cable to reverse the transmit and receive data lines.

If you've gone through all this, I can't help you. Send e-mail, or post a question to the 'net, describe your symptoms with great care and detail, and wait for a response. Remember, you'll only make people mad if you post the question as "I tried to use TRUNKER and it didn't work. What did I do wrong?". Tell us what you tried, what worked kinda, and what didn't work at all.

All in all

Hope this helped you some. If reading this document got you up and running, let me know (better yet, send money! Just kidding). If this document lacked something obvious that you figured out knowing would have helped, send e-mail. I'll make changes. If you didn't like the document at all, I don't want to hear from you. Write your own document, and one-up me.

Happy trunking!

I am trying to restore full 800 coverage to my 46. I found only two web pages with the info that I need. Both mentioned the removal of resistors marked "0", which I did. I am having some trouble though with the next step which is to place one of the removed resistors (or jumper) on a couple of unused solder points. The instructions that I have used are a bit unclear as to where exactly these solder points are though. I have tried what I think to be the right one but my scanner works just as it normally would. Any suggestions or advice? Thanks much.

2889. DDI plans or help in finding.

Ralph,

It looks like you need to reprogram the fleet map for Cobb. You are seeing Type I IDs where you should be seeing Type II IDs. The only Type I IDs on the Cobb system are up at the high end of the address space. Block seven is a size-code S4 everything else is Type II (S0). In fact the Type I stuff is primarily used by Cobb Water and you could just set the whole fleet map to Type 2 and not miss anything of great importance.

Atlanta has some Type I radios at the low end of the address space but I never hear anything. It is not used too much. Just set the fleet map to Type II for the whole system and you'll do fine.

That's a good way of putting it. Though some of *us*
don't eat McDuck burgers or play on AOL, period. I had
a couple of guys tell me years ago how they'd cough up
gnarly green loogies and spit 'em in the burgers and then
laugh at people as they gulped 'em down.

That cured me of McDuck's for good. I'll eat their french
fries but that's about it.....

Well, I have no use for AOL other than to refer my clients
if they're green weenies and don't know the Internet from a
fish net.

AOL is good for the newbies.

But I loathe their UI and the inability to do basic
things. You make do with what they give you or do
without. I hate that.

But I do refer my clients to them.

Fabianism has always worked by peacemeal, as long as Governments have
no restraints on growth and tax limitations our freedoms will
diminish. And people will always vote for Democrats and sundry
socialists because they are too lazy to analyze the rhetoric.

Just do an internet search on scanners and you should be able to find a page with some codes. Or try finding a scanner book at a book store or library.

Search the range between 310 Mhz to 320 Mhz AM. The transmitters and
receivers are available from various cos. Find their ads in electronics
hobbist mags. A program could probly be written to decode the
transmissions using the sound card in a PC. These transmitters are very
short range and are AM not FM. So pick off from scanner to PC interface
will have to come from the AM demod chip.

You should have not problems listening to the old 30-50 Mhz radios but
if the SINGARS are in Secure mode forget it. You will need more than
a scanner to listen.

Most of the 200-400 Mhz Military comm is Airbore, the Army uses lower
channels for mobile and Microwave for "Fixed" links.

I bought a Radio Shack Pro-26 scanner two years ago on a recommendation from a good friend. I didn't know scanning then. I thought CBs were it for GQ-Public. But scanning has become the greatest hobby. And the Pro-26 is great for me.

At the Rat Shack in my neighboorhood, the manager has three scanners on his belt all going at once with those little clip-on speakers on his collar. All he needs are criss-cross bandito belts of AA batteries! He knows his stuff and won't hesitate to give negative info on inferior products I ask about.

It's one of his other idiot droids that tried to sell me a satalite dish. After I told him I had 150-foot trees all around my house, he suggested I cut some down!!! Sheesh! I told him to go back to play-school.

BTW, if there is a better scanner than the Pro-26 please let me know.

Take it easy,

I saw this once and thought some of you would like it :-)
it relly works
----------begin
info----------
The Uniden Sales Dept specifically requested that cellular images be
included in the BC9000XLT (since it's legal to do that). The front end
was
left wide open to allow this in the 360-385MHz range.
----------end
info----------

I just bought a PRO-2045!

I have a SIMPLE question or two....

Is there any MODS available for this scanner?

And why does it not scan in AM Aircraft freqs? Am I doing something wrong?

Thanks for supporting this newsgroup!

Well here we go again...

For those of you who do not know, let me fill you in. A few months ago, somebody plopped their fat ass down on 167.025 (SS pager frequency) and monitored, via a decoder, ALL of the pager traffic (both numeric AND alpha/numeric) during a presidential visit on that frequency. And then, not happy with that achievement, saved it to disk, and then gave said disk to a clueless reporter (oxymoron?) who then did a BIG story about the "super hacker" who somehow was able to decode this embarrassing info with a scanner, decoder and computer.

Now ALL decoders are "temporarily not being sold until clarification of current telecommunications law". That means NO RTTY, NO FAX, NO CW DECODERS. It is all GONE!!!

So for you assholes out there who just want share with the world your "great intercept" please don't. Most people are amazed when they find out that cellular and cordless phones can be intercepted. There heads will fucking blow off their shoulders if they know that presidential communications are being intercepted with a Radio Shack Scanner.

Lastly, for you QSL "fanatics" don't send a fucking QSL request to Andrews or White House, or Waldorf, etc., asking for a QSL of the great patch you heard from Evergreen to Eagle on UHF MUX. Ok?

First it was 800 MHz scanners, now RTTY/FAX decoders, next it will be YOUR el cheapo scanner. So keep your fucking mouths SHUT! You also might want to brush up on the Communications Act of 1934, and find out that not only are the QSL reqests stupid, most of them are ILLEAGAL as well. Get it??!!!

2936. Re: Question on decoding tones

Try the M-450 Decoder from Universal. Mine is hooked up to my Pro-2005 and decodes all pager modes, in addition to CTCSS, DTMF and a few other modes that I haven't even tried yet. This is a stand-alone piece of eqpt that can work off the speaker output of most scanners. I'm sure there are a few folks out there who are familiar with other external/internal decoders, and would be happy to share their opinions. . . .

Well here in Arizona they opperate on VHF freq's and one 800Mhz
frequency. Sounds like they might be on annother system in your area,
they're still operating the same here. :-)

Are you Steve Douglass, hiding behind an anonymous AOL account, or are you some
other asshole?

I've posted articles here & in rec.radio.shortwave over the years, and also
have a few on my web. I do talk, and I do write articles, and they're not only
more accurate than Steve Douglas' stuff, for example, but they are also my
original works, and not just copied verbatim from uncopyrighted gov't FLIPs,
and/or plaigerized from other sources. My works are also done aand available for
free.

If you're wanting to come out of your closet and have an on-point debate
concerning anything I've written, I'm here...

Radio shack has a new antenna out* . Its an Omnidirectional multi-element dipole with a scanning rage of 25mhz-1300mhz. Its 100'' tall (8.3'). I was just wondering if this is worth the 40 dollars that it is selling for. It also comes with RG-58 cable, which I will have to switch out with RG-8. My question to you experts out there, is this worth the money, or can I get more for my money somewhere else.

*I know Radio shack does not have a very good reputation for their scanner / ham radio products.

I have a couple questions...

First off, I have a PRO-2006 scanner, what are the best mods for this unit? It already has 800mhz enabled, and a gee-wiz mod(which dosen't work properly, by the way) Any other good things I can do to it? Also, what's a good all around antenna to use?

Second, I have several Regency MX3000 40 channel scanners. Any mods out there for these units? What are they worth? I would be willing to sell several, if anyone is interested...

> 10-99 jail break at _____

The 10 Codes here in Orange Co, Cal. are quite different. Why don't you (the original poster) just ask the local PD or SO for a copy of their 10 Codes meanings. The PD/SO Code Book for Orange County, Calif. are sold to the public for about $2 or $3.

While any RF signal can be "scanned", it is highly unlikely that anyone will be able to casually evesdrop on your SS signal.

It is my opinion that spread spectrum phones are as safe from eavesdropping as the wired sets in your house. In other words - don't worry about it.

As strange as this may sound, I was wondering if there`s a way to pick up the missing band of most scanners ( 520-760 ) without the use of a T.V.set. I don`t know why I want this, I guess it`s just curiosity as to what else may be lurking in that uhf tv band.
Does anyone make a converter that would move this band into scanner range?

Most phones use a frequency inversion scheme, which converts high frequencies to low, and low to high. Without conversion, it almost sounds like side band. There are kits for around $40.00, and even some shareware that works with your SoundBlaster card that will convert this type of scrambling. It's not secure at all!

Well, thanks to the price police I have repriced the AR8000 bundle
posted prior to Christmas.

AR8000 with Scout mod, 2 sets of Nicad batteries, charger, manual and
box. In Very Good Condition.

Opto Scout 40, Version 3.1 with manual charger, disks, box.

Opto Lynx with software and cables.

Scanca Gold Version 6.0, licensed copy with disk and manual.

Package Price is $800 + shipping.

Separate pricing:
AR8000 - $500 (with Scancat Gold) plus shipping
Scout - $250 plus shipping
OptoLynx $80 plus shipping

NOTE: The OptoLynx will not be available separately unless the AR8000
sells first.

NOTE TO PRICE POLICE: What would we do without you?

The problem with 10-codes is that each department uses a different code for different things. That is why the military doesn't use it because it can't be used internationally. Things like 10-4 and 10-10 are pretty much standard but the rest can change even within neighbouring departments. Just keep monitoring and you are bound to come up with some.

From: Bryan <bryan@bc.cybernex.net>
Message-ID: <687id7$i50$1@news.cybernex.net>
Source record: 175945

I personally own a 2042 for about 2 months now, and I am extremely happy
it. I had previously owned (1) PRO-51, (1) PRO-60 and (1) PRO-64. All of
which were hand held units....

Items that I like about the PRO-2042 BASE UNIT...

Real nice Display
Good Audio
Rotary Tuner and ability to "fine tune"
1000 programable channels
100 memory monitors
"Direct" access to a frequency
Lock Out per channel
Lock Out review
Coverage 25 mhz to 1.3 ghz
Auto store
Sort

For $299.00 (currently on sale from $399.) it is probably the most feature
filled scanner for the money.

Things that I wish it had....
Just one thing... It only has (1) priority channel - I wish it had at least
(10)....
Good luck in your decision, let me know what you do...

AOL is not an ISP, they are a seperate online service with
access to the internet thru gateways.

And YES, being on AOL is good reason to flame someone due to the typical
low mentality of their users.

(but, there are a few decent ones)

> like you. Your 10-100, 10-7

Looking in my Police Call-- I find 10-100 meaning police needed, check warrents and short break. 10-7 seems to mean out of service or pick up prisoners! Not exactly a universal code! That was what wiggie was saying.

Wiggie gave good advise and all you did was bitch about him. You gave no help at all. And Wiggie is the asshole?????
> That sure was a Very POOR attempt at humor on your part.
>

I used the GRE converter that converted 800 mc cell freqs ro 400 mc and it worked very well. Extremely sensitive. I also had their descrambler and it worked fine on scrambled 46 mc cordless phone calls and on the earlier police scrambling method. I thought GRE was out of business now. Unless you alreadt bought the converter, you might try flea markets for an 800mc scanner. It might not cost you any more than the converter. Best wishes!

Hi John:

I followed your advice and did a quick dejanews search to see what you have posted to rec.radio.scanner in the past month. Remember, you said I could verify that you never lie that way? Well Buddy, I didn't have time to go through the 572 posts in which your name was mentioned in the month of December. I'm sorry that I wasn't able to support your claim.

Anyway, I noticed that you personally posted 272 messages here, although only two was on the subject at hand. In one message you said that "CTCSS was a nice accessory," and in the other you said, "You would be happy with either interface." That was very helpful, and I thank you for taking the time to help out a fellow hobbyist.

It sure looks like you have contributed quite a bit to our little piece of the world. Thanks much for your insightful comments and all of the help that you have provided the many rec.radio.scanner participants! Here's looking forward to another great year!

Oh, one more thing: What software for the PRO64 would you recommend? I was thinking about ScannerBlaster. How does that compare to Radio Assistant?

Thanks again, pal,

Michael Alexander

Source record: 175984

Learn what your local radio codes are from observations, careful monitoring, handwritten notes, common sense, trial and error, etc., just like all us "old timers" did when we first started out scanning.

There is no magic formula, no books, etc. that can show you most small town radio codes. You have to learn them the old fashioned way, You Earn Them!

Good luck,

Les

3012. Uniden 900Mhz EXAI 918

Newsgroup: rec.radio.scanner
Date: 1997-12-28 00:00:00 UTC
From: one7th@aol.com
Message-ID: <19971228014200.UAA21108@ladder02.news.aol.com>
Source record: 175985

Hello...
Just got this phone for Christmas and I was
wondering if anyone knows anything about it...
How easy would it be to scan?
It says it has voice scramble, but how easy
is it to descramble?
I don't think it's a digital phone, so that leads
me to believe it's easier to scan than a
900Mhz digital spread spectrum phone...

Thanks for any information.
Nelson Johnson

I've been looking at the Austin Ferret as a possible replacement for my discone antenna. I'm mostly interested in monitoring 30-500 mHz. Anyone have any experience with it? It's a little pricey ($250) and I wondered if it was worth the cost.
Thanx

>scanner? please reply to my email address bnich@bellatlantic.net thanx

If your CB antenna ends in a PL-259, AND your scanner input uses a BNC, then
you can use an adapter, Radio Shack Cat. No. 278-120 to adapt it. Of course,
there are other suppliers for this adapter. If you are in the United States,
Radio Shack would be the quickest place to find the adapter.
If your scanner accepts a 'Motorola' type plug, then use Cat. No. 278-208.

From: Kent Gormat <kgormat@novagate.com>
Message-ID: <34A62269.5F2E@novagate.com>
Source record: 176002

I'm interested in hearing testimonials from those who have successfully received INMARSAT-A transmissions. I am particularly interested in personal communications as opposed to fax and data. Specifically, I would like to know the equipment used, frequencies, etc.

For my personal setup, I have just obtained an ICOM R7000, and tentatively plan to purchase an INMARSAT tuned loop yagi from Down East Microwave. Before making the antenna / preamp plunge, I would like some input from experienced listeners.

I've asked this question in the past, however, I have been unable to solicit many responses. All replies will be greatly appreciated.

Regards,
Kent

Yeah, you're right, but you'll have to forgive him for taking such a parochial point of view. He was probably thinking that since personal computers, software, the Internet, routers, bridges, etc. etc. etc. were invented by Americans, and that the US has the highest per capita penetration of PCs that most newsgroup readers were Americans. It is awfully short sighted of him. I'm sure that he will be much wiser now that you have enlightened him.

BJ>the U.S., you DAMNED well better be carrying your perscription when
BJ>you're found with the drug. If it's illegal HERE, you'll probably go
BJ>to jail.

Hey Bud, lighten up and learn the facts, okay? I didn't make this up, I saw this on TV during an interview with a customs supervisor along the Mexican Border. Also, if you read my post with an eye towards comprehension, you will note that I said that the drugs and scripts were legal in the country of origin, in this case Mexico. The intent of course was to allow people with legitimate scripts from their own country to legally bring them into the country. Some unscrupulous people have taken advantage of this loophole in the law to bring drugs into this country.

Being in the medical field and working in a city that has lots of international visitors I often see perscription drugs that are not authorized for use in this country by the FDA. Never have I heard anyone utter word one about it being illegal. These people have all come through Customs and not been arrested or fined.

I'll repeat it for you. As long as the person has a script and drug that is legal in the country of origin AND has the medication in the original container as dispensed by the pharmacy the drug is legal to bring into this country. The intent is for personal use, but the effect is to bring drugs into the country for illicit purposes.

At the present time, there are no receivers or scanning devices on the market, capable of listening to digital spread spectrum transmissions. I'm sure in a few years, some manufactures will come up with a receiver.

You can monitor analog 900 mhz phones in that range, if your scanner will go that high.

Not sure if you are talking about the Detroit Police Department, but if you are, channel 5 is 453.550. This is their station-to -car and somewhat of a car-to-car frequency.

Chris

Message-ID: <01bd149f$b0e51280$LocalHost@jvmullins>
Source record: 175778

In reading the group,the discone antenna seems to be the omni dir.ant. of choice, of the ones that
should know
Explain : if you have one electronicly extended element at top for LHf , eight at bottom for VHF.dosen't
that leave only the short horiznal elements for UHF? isn't that cross polarizeation, can that be efficent?
With all the consern written lately about the pros and cons of what specs the coax should or shouldn't
have, wouldn't it be of most importance to be in the correct polarity of reception, that freqs. recieved,
(UHF)are transmitted on ?

Message-ID: <6899e2$5qp$1@cronkite.lanminds.com>
Source record: 175787
Cross-posted to: rec.radio.scanner,misc.transport.rail.americas

My book shows:
160.920 from Denver to Lyden
160.455 from Moffat tunnel to Lyden
but 160.455 seems to be used all the way from the tunnel to Denver.

161.22 Denver yard

452.900 is a repeater with good reception (I can hear it all the way into Longmont).

457.900 is listed, but I haven't heard traffic on it. Could be used farther west.

160.725 Maintenance

160.275/161.175 PBX (phone patch)
160.365/161.235 PBX

I have heard traffic on most of these channels (except the PBX and Denver yard) on trips to the Moffat tunnel, so I know they are used. 160.455 is where the dispatcher and the talking defect detectors live. On the other side of the tunnel, I am not sure what they use. I would try 160.920 or 161.565. I know I've monitored it, but I didn't make a note of which channel it is. Hope this helps.

3073. homemade antenna for cordless phones

Newsgroup: rec.radio.scanner
Date: 1997-12-29 00:00:00 UTC
From: barun@worldnet.att.net
Message-ID: <883439987.1833304071@dejanews.com>
Source record: 175796

I have built 2 really cheap antennas that I use for the 46-49 MHz band. Both of these were built based on a posting in this newsgroup a few years ago. I will describe both for you.

a) 10 ft dipole. I took about 10-12 feet of regular speaker wire and separated the 2 wires for about 5 feet. The 2 individual legs make up the dipole. At each end, I stripped about an inch of the insulation, made a little loop of the bare wire and used a thumb tack to tack it to a wall. At the middle, I used a little masking tape to prevent the wires from separating - also a thumb tack to hold up the middle. I did not bother with baluns or coax. Stripped the insulation from the ends and attached a suitable plug for my scanner. This antenna works really well - much better than the rubber duckies or telescoping ones that come with most scanners. Best of all, for the price (and 10 minutes of your time), the performance is excellent.

b) An offset dipole. This one was also built based on an old posting in this newsgroup. Again I used speaker wire. One leg of the dipole is 18 inches and the other one is 48 inches. This one I hung vertically. I don't know the technical explanation but in terms of performance on the cordless phone frequencies, this one pulls in signals as good as the other dipole but it is definitely noisier - that is I get a lot of background noise.

if you come across any easy to build antennas please let me know. Hope this helps you.

How do you do it?

Aside from finding time to address issues that even someone with the IQ of a mudflap would consider useless, you also graciously squeeze a little semantic hair splitting into your busy schedule: ISP, online service...whatever. Is there a single solitary living being in the entire Universe besides you that really gives a crap what online service Bill uses...or doesn't use?

I will, however, give you credit for knowing plenty about having a low mentality.

Peace,
Charlie

Here it is. This is the best, and only mod for the radio (I think). I performed this mod on my own radio, and it works perfectly!!!!!! Good luck, and don't mess anything up.

This is the basic VX-1R mod. I've taken what I've found on the net, and expanded on it slightly, after performing the mod to my radio.

Note that after performing the mod, ARS (Automatic Repeater Offset) will not function (whether it's turned on or not), and you will lose any stored memories and preferences.

The mod is very simple. First, put the piece of protective plastic back on the display, or take a 3M Post-It Note (tm), and stick it to the display. Work on top of a piece of 8 1/2 X 11 paper (good contrast, will also keep from marring the radio).

Open the radio by removing the 3 screws. Taking a small flat screwdriver, release the tab on the left, inside the battery compartment (assume radio is facing down, antenna away from you). Release the 2nd tab that's about halfway up the inside of the battery compartment. Being very careful, separate the 2 halves the radio. You'll need to apply a kind of rotation along with the separation. Note that the battery compartment lid and hinge pin will fall out. Keep track of these!

Immediately to the left of the rotary knob and next to the edge of the case, you'll see two pads, marked 0 (closer to the top) and 1 (below 0). They look like a gold circle with a line down the middle. You won't have to move the battery compartment sticker to see these. Each of these pads need to be bridged with a solder blod. Use a small iron, and work carefully, or you'll burn the case.

After bridging the pads, snap the radio back together. I had a slight amount of difficulty getting the right side of the case aligned, so you may have to work at it slightly. Before you actually perform the "snap", put the hinge pin through the battery compartment lid, and reinstalled the lid. Replace the 3 screws.

Add battery, antenna back to radio. Holding the M/V key and AR, apply power (this is the hard reset to the radio). When the menu that says "INI? F" appears, press the F/W key to reset the radio. You should now have the expanded mod. You will lose all the memories and preferences, so either record them, or do the mod before you save lots of frequencies.

My tests show that you can also now transmit from 108 to 137 (AIR), 137 to 170 (V-HAM), 170 to 222 (VHF-TV), 420 to 470 (U-HAM), and 470 to 580 (part of UHF-TV). I haven't measured power output, but am simply going on the fact of the TX LED lighting or not, and whether it made the speakers next to my PC buzz or not. Remember, it's not nice OR legal to transmit out of band, or outside your license class.

When tuning around, be sure to check the receive mode. The processor puts the radio into AM in places where it doesn't make any sense, so don't trust the RX-MODE option being in AUTO. I keep mine disabled.

I do not represent Yaesu, and cannot be responsible for improper use or performance of the radio after the mod (standard disclaimer BS, you all know that...)

It's a chirp of about a second in duration, every 5 or 10 seconds. It contains a 4 or 5 bit ASCII (?) string that conveys the alphanumeric unit code for the particular LoJack transmitter.

I got a Pro-2045 and the step rate for 200-400 Mhz is 12.5 Khz....

I know the Pro-2040 will do 5 Khz steps.....

And I missing any transmissions by having a 12.5 Khz one? I cannot change
the
step rate on the 2045....

I need to know asap so I can exchange this one if necessary!

Thanks!

Hello All,
I am looking into purchasing a BC895XLT. I found an outfit called JRCE International, http://jrce.com. John has the 895XLT for $289.95. Has anyone ever dealt with him? I discovered that he only gives a warranty, you can't return it if you don't like it! Not a bad deal if the scanner is as good as I hear. Anywho, I would like any info on about his biz.

Secondly, I am looking for Trunking info for Washington, DC, Alexandria, VA, and Waldorf, MD. Do they employ the motorola system? If so does anyone have the respective freqs.
tia,

As things are right now, it's pretty hard. Unless you are a mega computer geek with an engineering background, or know someone who is and has a lot of time on their hands, it's very unlikely you'll descramble the transmission. If you do figure it out, RUN, DON'T WALK to the nearest patent attorney.

For your 2006, get the "Scanner Modification Handbook, Vol. 2" by, who else, Bill Cheek (CRB Research, 1991). I don't know if it's still in print or not, but if it isn't, I'm sure someone on this newsgroup will sell you one, or you can scour the swapmeets.

There is a "Volume 1" in the series, but most of the mods in that book are for the PRO2004/2005, and not all of them can be applied to the 2006. Neither book offers anything for Regency MX3000.

Peace,
Charlie

> (UHF)are transmitted on ?
>
> JVM

The discone is a very good choice for a broadband omni directional antenna. It is vertically polarized and maintains an SWR of 1.5:1 or less, usually over several octaves of frequency. This feature is what makes it so attractive as a VHF/UHF antenna.

The skirt elements of the bottom section are approximately equal to the free-space 1/4 wavelength at the lowest frequency for which antenna is built. The disc like short horizontal elements are typically 0.67 to 0.7 times the length of the skirt elements and insulated from the skirt. Adding the long vertical element above the center element makes the antenna usable at even lower frequencies. The Diamond D130, for instance, uses this element to extend the lower range to 25 MHz. Without this element, the lower frequency would be around 50 or 60 MHz.

The antenna itself does not exhibit any cross polarization effects. In a typical scanner station, the listener is mostly looking for mobile stations and their associated base stations. Both the mobile and base stations use vertical polarization on their respective antenna systems.

If you use horizontal polarization to listen to a vertically polarized signal (or vice versa), you would suffer as much as 20 dB signal loss. For example, lets say your station has a discone antenna, which is vertically polarized, and your scanner has a sensitivity of 0.5 uV in FM mode.

You are listening to a mobile station that is transmitting on a vertically polarized antenna. That signal might produce a 1.0 uV

signal at the antenna connector of your radio. Now, if you used the same antenna in a horizontally polarized configuration, you would suffer a 20 dB loss in received signal strength. That signal would be reduced to 0.1 uV, which is below the threshold (0.5 uV from above) of your receiver. In other words, you wouldn't hear it. This is why it is important to install your antenna with the same polarization at that used by the stations you are trying to monitor.

Dear Sir...

What in the FUCK is the matter with you?

1. Radio Shack makes pretty good scanners at O.K. prices. If you can't
afford one, that is your problem.

2. It's not his fault he's in a wheelchair, why are you making jokes about it?

3. I have a scanner and I listen to phones with it. Is that O.K. with
you? I'm not making money off of it, I just like to hear people talk
about their various activities when they think they are safe...

4. Why in the HELL does it matter what he uses it for? Am I mising
something, because I don't think that it is your decision to make, and
putting him down because of it is WAY WRONG (!!)

5. Just because he got a pretty decent scanner is no reason to tease him
for it!

If you have a problem with this, please tell me, because I fail to see
the logic in your reasoning with this person...

Dale,
I don`t think it would hurt anything to do it that way,BUT, a better way would be to ground the radio itself to a good earth ground. Something like a cold water pipe (metal) or a copper ground rod like you could find at Radio Shack or other outlet. The braided shielding from old coax makes some of the best (and cheap) RF ground. Just cut the outer layer off the coax being carefull not to damage the braided wire, and kind of work it down from the center section. Very time consuming for a long run, but worth it in the long run. Good luck.

I've been following this thread for a while, apart from WinRadio being conceived in Australia.

A radio with a computer in it or a computer with a radio in it.

PLL with digital dividers etc, radios have had computer logic in them for a long time.

Have I missed something here some people proclaim this piece of equipment as being very good and others bad.

I've read good and bad reviews about WinRadio. Although I can't say I've put my money where my mouth is because I don't own a radio apart from the general AM/FM variety.

I would have thought, assuming that the device does work whether or not you want WinRadio you have to make the same decision whether you want a fax card in the computer with the computer being on all day or a separate standalone FAX machine.

I'd always expect if a customer could not get the equipment to work on their paticular machine they always have the redress to return the equpment for they're money back .

I cannot comment about Bill Cheek as I do not have any past experience with him. Could I suggest not continuing this thread.

I don't think your doing a relatively unique product any good by continuing this discussion.

If you want to criticise this individual change the subject to not include WinRadio.

Jon

3101. ICOM R-10

Newsgroup: rec.radio.scanner
Date: 1997-12-29 00:00:00 UTC
From: ATA <blackbelt76@yahoo.com>
Message-ID: <34A88431.2837@yahoo.com>
Source record: 175824

Just a thankyou to all who emailed me concerning the R-10.
It seems the concensus is as I thought it might be.

It's a great radio (Range wise) but the extremely sloooow scan speed is
difficult to overlook. Too bad. IMHO, a radio such as this should be
able to produce 30 cps at a minimum.

So I think I'll pass on this one. 6 cps just don't cut it.
I understand Alinco is waiting on FCC approval on a new wide band rig w/
faster scanning.

When I saw Icom was discounting the R-10 to 400 dollars, guessed sales
must have been slow. This marketing strategy seems to tip their hand.
:)

Thanks again all....

73'
Pete

John Mackey -- KA0SSF, <jmackey@usa.net>, Men's Room Attendant
for the Pathetic Amateur Radio Group (PARG) broke wind thusly:

> > Guess what? You're off my Shit List for a moment. Thanks to
> > someone forward your idiotic post below, guess this makes for
> > prime fodder to cram down your cavernous gullet....or up your
> > more cavernous grump stump:

> I doubt I was ever on it is the first place. You can't stand to NOT
> be in the mainstream.

Ohhhh you *are* on my Shit List, that's for sure. And
I can easily handle not being in your "mainstream". You
are the most worthless excuse for a newsgroup participant
I've ever seen or even heard of. Mackey, you're as worthless
as mammary glands on a boar hog. Not only that, but if I
had a dog that looked like you, I'd shave his ass and
teach 'im to walk backwards when people were around.

I do have to admit that you are a standout, though. In
this honorable forum populated by a host of smart fellers,
you definitely are in contrast as a *fart smeller*.

<chortle> <cackle> <bellylaugh>

> > Ha ha ha ha ha ha ha ha ha.......Whooooooooeeeeeeeeyyyyyy! I can't

> > 'Net looking for me? Ha ha ha ha ha ha ha.......

> No, someone sent it to me & asked me to address the issue & post
> it!!! hehehehe, JOKES ON YOU!

Oh. Well, Petey Joe Boe sent it to you. That's even worse.
Believing and associating with that Prozac-eating milquetoast
is loser enough without having to depend on the nitwit for
information. You're stupider than I thought, you dumbshit.

> > What you didn't know and what I didn't say in that post because it
> > served no useful purpose to say it, was that I posted the above on

> > account.........NONE OF WHICH I OWN OR USE........

> I don't believe you. In the original posting of the problem you
> state "I have a computer,,,,,". Your own words indicate it is YOURS,
> not a CUSTOMERS. See below!

Why the hell would I be verbose in that forum and say the problem
was on a customer's unit? That's nonsense to go off that tangent.

Short, sweet, and to the point is the best way to deal in technical
forums. There was no relevant need for me to explain that the unit
belonged to a client.

You're even stupider than the stupider that I originally thought
you were. Geezus.....

> > ha ha ha ha ha ha ha..... I've got an AMD K6/233 and some

> Yea, I have all this too. So, why should I (or any one else) give
> a damm about your bragging?

If it were bragging, you shouldn't. But it says as much
what I DON'T have, you frigging imbecile.

> > But if I were you, I'd tuck my tail betwixt my legs and RUN... you
> > gonna lose this one, big time, Mackey. You done barked up the
> > wrong tree and got yourself a skunk by the arse in your jaws.

> Bill, you should follow your own advice. You were caught in a lie &
> you know it. Just cut your losses & run.

All you're good for, fecal-breath, is calling people liars.
Tough shit for you, but I don't lie. My regard for truth
is beyond your imbecilic comprehension.

It doesn't matter.....people know what I have and what I don't
have....and above all else, that I don't do AOL.....or USA.NET
for that matter.

You and your gooooooood-buddy Milquetoast Petey Joe Boe need to get
back in cahoots and see if you can concoct something better. Surely
you can get some gratification somehow without resorting to bullshit
and horsefeathers.

By the way, how're your eyelids doing?

Yes, I know full well how you were born *without* eyelids and how
the doctors grafted pieces of your circumcised foreskin for
eyelids....and when you reached puberty, they plucked and transplanted
tufts of pubic hairs for eyelashes .

You poor sap, you. You are the most unfortunate victim of
circumstances I've ever known. There ain't a day that goes
by but what I don't solemnly give thanks for "but for the
grace of God, there go I....." (referring to YOU).

<shudder>

You're one sick, sorry, shameful dude, numbnuts. If I was you,
and thank the Cosmos I'm not, I'd go see Jack Kavorkian. I reckon
he's about the only one on this planet who can help your sorry ass.

Get help quick, Mackey.

What is happening on this Newsgroup? fellow who asked about the new RS antenna did not deserve a caustic answer. It used to be that someone could ask a question here and get a kind answer. It seems now that there are more sarcastic answers than helpful ones. I concur with John Ward's comments last week about the shoddy treatment being afforded the "newbies" here.
If we don't get a grip on things here, decent hobbyists will desert this Newgroup and the only people who will post here will be the ones that most of us put on our twit list months ago.

> a cheap TNC would decode it .. Anyone have the spec.??

520.83 baud.

A quick explanation is here:

http://www.thuneagle.com/same.html

I have not been able to find any "official" documentation yet.

A few commercial decoders:

http://www.htcnet.com/msftrncs/products/nwsamd/default.htm
http://www.hamtronics.com/rwx.html
http://www.thuneagle.com/

Dunno' why they chose such a weird, non-standard baud rate. I'm
sure there were political reasons...

Have fun!

> there for these units? What are they worth? I would be willing to sell
> several, if anyone is interested...

They go for $20-$40 at the flea markets around here.

I have not seen any "mods" for them.

Here is a little MX-3000 "FAQ" I put together.

Regency MX-3000 FAQ

It is *not* 800MHz or cell modifiable at all. Period! End of
sentence! There is no circuitry to support it (even though it is
"dumb" enough to accept a 800MHz keypad entry).

It can receive outside the "normal" VHF-LO, HI & UHF bands, but
with severely reduced sensitivity (mine will scan as low as
390MHz, but whether it will receive anything is another matter).
See below.

Programming:

It follows the "Regency" programming style (mostly).

First of all, on this particular model, you cannot access a
channel directly (ie: <Manual> <1> <2>), you have to press
<manual> repeatedly to step to the desired channel (there's only
30 of them!).

Entry:

To Enter a frequency:

<manual> <X> <X> <X> <.> <X> <X> <X> <enter> <X> <X>

To enter 162.55MHz in ch 5, press

<manual> 1 6 2 . 5 5 <enter> 0 5

Channels below 10 must be preceded with a "0"

Lockout:

To lock/unlock-out a channel, IT MUST BE IN SCAN MODE! Enter in
the channel number to lock out (it toggles).

To lock/unlock channel 20 press:

<scan> 2 0

To lock/unlock channel 1 press:

<scan> 0 1

Search:

To search a range of frequencies, enter:

<manual> <search prog>

1 6 2 . 4 <enter> <lower> (the "1" key)

1 6 2 . 6 <enter> <upper> (the "2" key)

<search scan>

Press <search scan> to continue scanning if a undesired signal is
received.

Note: The scan limits are very loose. It's sensitivity is only
rated for the normal operating bands (Low, High & UHF). You can
program it to scan/receive down to 1MHz, or as high as 819.99MHz,
but it generally craps out below 28MHz and above 530MHz (this is
not an 800 MHz scanner). If the PLL cannot achieve lock, it
displays "error". Reception drops off near the edges. Just
because it "locks" does not mean it can receive!

The useful range on mine seems to be:

28MHz-53MHz

136MHz-185MHz

400MHz-530MHz

Misc. info:

If you goof-up while entering a frequency, press <manual> to back out.

Pressing <delay> (the "." button) toggles between hold and delay modes.

Pressing <speed> during a scan slows the scan speed.

The keypad only lights up in the "night" mode.

Beep Mod:

By now, you have probably noticed that this unit has an obnoxiously loud beep. It just requires a resistor to be added to quiet it down.

Place a resistor (500 to 2K ohm), or a 10K pot, across R177. R177 is a 22K resistor (red-red-orange-gold) located at the front of the PCB, under the keyboard flex cable, next to Q114. Solder the new resistor to the pads on the underside of the board. You do not have to remove the original resistor. The lower the value resistor, the lower the "beep" volume. I am using a 220 ohm for a very quiet "peep".

Detector output:

The detector output is pin 10 of the 18-pin "600-565-1" chip, or the orange "D" jumper wire next to it. (BTW: It's really a Motorola MC3359). The node is fairly sensitive to loading.

IF frequencies:

1st: 10.7MHz High side
2nd: 455KHz (10.245MHz 2nd LO)

Power Requirements:

AC Adapter: 12VAC 0.8A wall-wart - 2.1mm Coaxial jack.
DC Input: 10-15VDC - 0.25" male spade ("fast-on")

Typical Currents @ 12VDC (scanning / open sqlch-full vol)

Day mode: 300mA/500mA
Night Mode 375mA/575mA
Display Off 280mA/480mA

Comments:

It is a decent little radio: good selectivity and it has a "helluva" set of lungs (a 4" speaker and a 2W LM380 amp). BUT, it does cause interference to other radios (especially SW), as well as to itself, and the squelch needs a little more hysteresis (I have not investigated that yet).

An external antenna is highly recommended. A "back-of-the-set"
antenna will pick up it's own radiated noise. Most of the noise
is processor generated and is radiated by the keypad.

END

Hi Rick,

I have to admit that I am unfamiliar with 1+1 and the company called
Genave.
I think the Fire Dept. here in Winnipeg uses a series of three DTMF tones,
but I could be mistaken. I'll have to see if my Optoelectronics pocket
decoder works on them. Let me know more about this "1+1" mode, if you
would. . .Tks!

There's been a couple people asking about 10 codes but no ones posted anything...

Here goes...

10-1 Unable to copy-change location
10-2 Signal is good
10-3 Stop Transmitting
10-4 Acknowledgement
10-5 Relay
10-6 Busy-stand by unless urgent
10-7 Out of service at _____
10-8 In service
10-9 Repeat transmission
10-10 Fight in progress
10-11 Dog case
10-12 Stand by
10-13 Weather and road report
10-14 Report of prowler
10-15 Civil disturbance
10-16 Domestic trouble
10-17 Meet complainant
10-18 Complete assignment quickly
10-19 Return to _____
10-20 Give location
10-21 Call _____ by telephone
10-22 Disregard
10-23 Arrived at scene
10-24 Assignment completed
10-25 Report in person to _____
10-26 Detaining subject-expedite
10-27 Drivers license information
10-28 Vehicle registration information
10-29 Check records for wanted
10-30 Illegal use of redio
10-31 Crime in progress
10-32 Person with gun
10-33 EMERGENCY!!!

10-34 Riot
10-35 Major crime alert
10-36 Correct time
10-37 Investigate suspicious vehicle
10-38 Stopping suspicious vehicle
10-39 Urgent-use light and siren
10-40 Silent run-no light or siren
10-41 Beginning tour of duty
10-42 Ending tour of duty
10-43 Information
10-44 Request to leave patrol for _____
10-45 Animal carcass in road at _____
10-46 Assist motorist
10-47 Emergency road repairs needed
10-48 Traffic standard needs repair
10-49 Traffic light out
10-50 Accident-F,PI,PD
10-51 Wrecker needed
10-52 Ambulance needed
10-53 Road blocked
10-54 Livestock on highway
10-55 Intoxicated driver(DWI)
10-56 Intoxicated pedestrian
10-57 Hit & run-F,PI,PD
10-58 Direct traffic
10-59 Convoy or escort
10-60 Squad in vicinity
10-61 Personnel in area
10-62 Reply to message
10-63 Prepare to make written copy
10-64 Message for lacal delivery
10-65 Net message assignment
10-66 Message cancellation
10-67 Clear to read net message
10-68 Dispatch information
10-69 Message received
10-70 Fire alarm
10-71 Advise size and type of fire
10-72 Report progress on fire
10-73 Smoke report
10-74 Negative
10-75 In contact with
10-76 En route
10-77 ETA
10-78 Need assistance
10-79 Notify coroner
10-80 Prisoner in custody
10-81 Warm up intoxilizer
10-82 Reserve lodging
10-83 Permission to talk car to car

10-84 If meeting _____ advise ETA
10-85 Will be late
10-86 Engage SCRAMBLE
10-87 Pick up checks for distribution
10-88 Advise telephone number to call
10-89 Clear to eat
10-90 Bank alarm
10-91 Unnecessary use of radio
10-92 Open overhead door
10-93 Blockade
10-94 Drag racing
10-95 Turn on gas pump
10-96 Mental subject
10-97 Home check
10-98 Prison or jail break
10-99 Records indicated wanted/stolen

I've been told that these codes differ slightly in different areas...
I doubt they change very much...

>
>

That is not true in Northern Illinois... In the three stores I have been in here, they all know about each radio (i.e.: C.B. or Scanner) and if they don't know the radio, they will get some one who does knows the radio. I am a frequent buyer from RS and im happy with my service.

until next time,

to be continuned

I just recently got that antenna from Radio Shack when it was on sale for $30. Its a clone of the scantenna, or so it seems. It works very well. I put it on my TV antenna mast. Unfortunately, even though the catalog says it comes with 50' of cable, none is provided. I went back and the guy at the store gave me 60' of rg-8u for free. I know its not the best but it was free. I still don't know exactly what family of rg-8 it is cause it has 7 strands for the center conductor but is .25 in diameter. Oh well, it works well and I'm very happy with the antenna.

Good luck

3128. Discone Bad at 450 Mhz RX ???

Newsgroup: rec.radio.scanner
Date: 1997-12-29 00:00:00 UTC
From: trinit69@idt.net.nospam
Message-ID: <trinit69-2912971044480001@ip100.lafayette.la.pub-ip.psi.net>
Source record: 175851

I have a Diamond Discone ant that can't seem to pull in my company's repeater at 450 Mhz. The repeater is 30 miles away at a height unknown to me.

If I take just the scanner to my second floor window and use just the stick ant in the back of the set, I can hear the repeater at 450 mhz. I can kerchunk it with a Motorola HT-1000 from the 2nd floor.

What is the problem with receiving it with a scanner/discone ant?

He is the setup.

Diamond discone up 30' in a tree, 50' of RG-6 cable to a Uniden 9000XLT. There are two adaptors in the cable, a F to PL-259 at the ant, and a F to BNC at the scanner.

The discone seems to work fine everywhere else. On aircraft, I can get the ATIS from the airport about 7 miles away, MIL UHF is good. I can get weak, but readable signals from a control tower at 125.0 Mhz, 30 miles away. I can "sometimes" get WX stations at 162.4 and 162.475 from 60 miles away. The local WX on 162.55 is strong as are police at 800 mhz. It seems to work well on 6 meters, equal to my dipole on the 6M rig.

What gives at 450 Mhz?

Is it feasible to install specific resonators on a discone to capture a certain frequency at greater than the present no-gain discone performance?

Help . . .Tom N5OFF

I was going to try VERY VERY hard to stay out of this, but after approx *FIVE* posts by you filled with nothing more than bashing U.S. newsgroups for not tagging a country disclaimer I cannot take it anymore. If you don't like they way that we post then get your OWN server and start a Canadian Only newsgroup and leave ours alone.

You blather on about need to disclaimer the bejeebers out of this information so that some (paranoid, hysterical, idiotic, moronic, crack addict canadian) doesn't blow right off the deep end about what they can listen too. I think that I can speak for the U.S. portion of this NG when I say that we have enough of these (paranoid,hysterical,idiotic,moronic, crack addict Americans) of our own to contend with (Where is Emilio and Mackey?) without having to try and figure out the applicable laws for the entire WORLD-or even Canada for that matter.

The TRUTH is that this NG is OVERWHEMINGLY DOMINATED by users from the UNITED STATES OF AMERICA-not Canada or some other country.

Now shut your damn face and post some RELEVANT content you bandwidth wasting Canadian. Oh by they way, I am pretty much offended by your e-mail address being at 'HowardStern.com' the guy is a total loser and your supporting him explains much about your childish/immature behavior

Cliff->Who is glad he lives in Wyoming, which is plenty far from Canada eh?

I am looking to get a nice computer controlled scanner rig and I have some general questions on how the ICOM PCR-1000 stacks up against a WinRadio or a handheld (like the AOR 8000 or the Alico DJ-X10 or any other handheld) when using something like Scancat.

I am interested in sensitivity comparisons and software comparisons. Any and all responces will be helpful.

The last question is how nice is a receiver like the AOR 5000 when compaired to these other scanners. Obvously the 5000 is going to be much better, but would you say the it is 4x better.

Thanks for all the help!

34 KB is only slightly large. Many people accept that size. However, to make smaller file sizes, use the format known as JPEG (.jpg). When you Save the picture, try different "compression ratio." You should be able to get the picture to 10 KB easily.

(Sorry for being in English, the translation page server was not working right now.)

Actually RadioShack does have a GOOD reputation for it's Scanner/Ham products. Just some people have had one or more bad experiences and so have written the company off for good and do nothing but bash it. I wonder when these people will grow up and stop giving Wal-Mart record profit growths. Now THERE is a know nothing company with personal who are clueless and don't care. Sheesh.

Cliff

JC> CHEAPLY? Are there any programs out there?

I am sure some have. That is if they don't use some type of scrambiling. BUt
there is no really Cheap Way and since there is NO standard univeresally used
what works in one area or for one agency might not work in another area nor
with another agency.

I have nevere caught it. But since it uses a 4 Antenna Directional Reciever
that activates one of 4 directional lights depending on recieved signal
sterngth I don't suspect there is any change in the pulse rate of the beeps.
I would only expect the Signal Strength of the pulses to increase as one gets
closer.

The MFJ1213 works fine with programs that use discrimiter output.
Don't let the 1/8 phone plug fool you. Change the cable or connector
to match what you need.
What are you intending to use it for?

I have heard it active twice. It is a series of short tones, one might call it "beeping", and I believe the interval between "beeps" shortens as you get closer to the transmitter. I was at home both times I heard and I chose not to listen for more than a few seconds.

> can be bought?

As others might have mentioned, this is old technology. NOAA will
eventually be doing away with the 1KHz tone, going instead to the digital
databursts that specify a certain county or counties. That way, warnings
are more effective and earmarked for just a specific listening area.

Radio Shack was the only distributor of the new radios, but some others
are coming out on the market very soon. Save up your pennies, they're not
going to be cheap ($70 or so), but they'll be worth it.

Have fun!

Thank you all for your response to my questions about the Radio Shack Part number for the monitor .. What I'm looking for is a decoder to decode the actual stream of information, or atleast find out what the protocal is for the data stream. I'm wondering if it is 1200 buad - AX25 protocal, and that maybe a cheap TNC would decode it .. Anyone have the spec.??

> John Harr
> KD4GAW

The BCT-7 isn't a bad scanner....it was poor judgement
to not have a keypad though....But it is good for travelling
since all you have to do is change to what ever state your
travelling in and it has every freq for the police and highway patrol
programmed in for that state....next base I get will definitely have a keypad though....
eheheh

Purely by coincidence, my dear mother got one of these for Christmas last week. In my purely unscientific opinion, I think it kicks major scanning butt. No trunk tracking, though. That's about the only thing it doesn't have.

The BCT-7 is fairly loud...it also has a warning light and signal if your
within 3 miles of a squad...if it's transmitting or receiving I'm not sure..

The speaker would depend on your tastes and noise levels...

You program it by searching the band and then hit a program button...
then you place it in whatever bank and channel you want it in...

I don't know about the best...it works for me...

I'd check out radio shack first though...eheheh

Yes, I forgot to add that in there. However, data is about prevalent
on 10 meters (in my experience) as AM is! It may be allowed, but it
isn't used nearly as much as the other mentioned modes!

I've add support for the R8500, R7000 and R10 in this version.
R7100 support is there, but is untested (I'm told that the address is
the same for the 7100 as it is for the 7000).

The package also includes the tutorial I posted to the net, a
few days ago.

If you would like a copy, please feel free to e-mail a
request.

Just bought it for $30 on sale. Not mentioned in group before, but it specifies using RG59 - 75 ohm cable for lead-in. It has a transformer to match dipoles with cable. My store didn't want to include cable as listed in catalog - but when I said I was going to check with RS office, they did. In fact they gave me 50' of RG6 w/connectors (alone is $15) when I asked for it. No complaints here! It works great - just put it in my attic. Much improved over back of set antenna.

writes

Hi,

>are any pro 60 scanners from canada different than the us ones? and can
>they be modified?

I think you will find that models sold by RS in Canada are generally the
same as those sold by RS in the USA.

In the case of the PRO-60 the only way you will restore the "missing"
frequencies so you have keybaord entry is replace the main IC/CPU with
the ones used on the UK/European version. This isn't a easy job unless
you are familiar with working with surface mount components (The cpu is
a 100 pin device).

The PRO-60 does not have programmable step sizes as part of each feature
set and in the 800MHz you would find that the default step size is
12.5kHz.

Hope this is of some help.

Cheers,

>don't

<<<<<<< Snippity Do da , Snippity Day >>>>>>>

And where in the name of this newsgroup does it say U.S. . According to the name, this newsgroup is "alt.radio.scanner" , and "rec.radio.scanner" neither of which states or even implies that it is a U.S. Newsgroup, more likely it indicates it is an International newsgroup. You know *INTERNATIONAL* as in *WORLD-WIDE* , as in NOT Just U.S. Ng users. I agree that attaching a disclaimer every time a posting is made is pretty much a pain, but how much extra time does it take to just slip in the sentence "by the way I'm located ...." in the posting instead of just EXPECTING everyone to take your advice/help as gospel for what ever country they might be in. Your posting on this subject seems to me like a lot of U.S users postings , that you seem to think the whole internet is set up simply for your own use and that if others should DARE to use the net who are not from the U.S. then they do so at the risk of being *Mis-informed* if they should openly in an *International* Ng for help. If people don't mention *Where they are located then any information offered is of no use whatsoever.

Freinds:

I appericate the response to my post,---"Discone Ant ????" ---, I fear I
have failed to convey my
guestion correctly !

I have only limited expierance in electronic communication,only personal tv
reception , scanners, and
a lot of dabblying in citezens band back in the ' '70s

I have a pretty good understanding of , and the purpose for,
verticle/horizontal transnission and
reception, after using "moonraker" cb antennas,and "Polarotor" Feed horns
on C-band Sat. antennas.

Explanation of the difference between the ver. and hor. plane was not my
guestion,

Really,the only question is, "which elements of the discone ant. recieve
UHF.-----short,med,long,
ver.or hor.---- or, all working togather ?

The purpose of the short horizontal elements are still unclear,to
me------unless they funtion as a ground
plane, as in the Horizontal elements at the bottom of an old "Super-mag" or
"CLR-2" do.

Thanks again,
Johnny V. Mullins

3189. CTCSS tones for FRS Radios???

Newsgroup: rec.radio.scanner
Date: 1997-12-30 00:00:00 UTC
From: "Robert H. Eisner" <rheisner@worldnet.att.net>
Message-ID: <68blh4$nqm@mtinsc03.worldnet.att.net>
Source record: 175597
Cross-posted to: rec.radio.scanner,rec.radio.cb

Hi All,

I was wondering if anyone knows what the standard CTCSS tones
are for most FRS radios? I was told that there are only 38 of
them, but just found out that not all brands use the same 38???

The Midland 75-510 unit that I have uses the following

The 38 CTCSS tones are as follows:

Tone 01 67.0 Hz Tone 20 131.8 Hz
Tone 02 71.9 Hz Tone 21 136.5 Hz
Tone 03 74.4 Hz Tone 22 141.3 Hz
Tone 04 77.0 Hz Tone 23 146.2 Hz
Tone 05 79.7 Hz Tone 24 151.4 Hz
Tone 06 82.5 Hz Tone 25 156.7 Hz
Tone 07 85.4 Hz Tone 26 162.2 Hz
Tone 08 88.5 Hz Tone 27 167.9 Hz
Tone 09 91.5 Hz Tone 28 173.8 Hz
Tone 10 94.8 Hz Tone 29 179.9 Hz
Tone 11 97.4 Hz Tone 30 186.2 Hz
Tone 12 100.0 Hz Tone 31 192.8 Hz
Tone 13 103.5 Hz Tone 32* 203.5 Hz
Tone 14 107.2 Hz Tone 33* 210.7 Hz
Tone 15 110.9 Hz Tone 34* 218.1 Hz
Tone 16 114.8 Hz Tone 35* 225.7 Hz
Tone 17 118.8 Hz Tone 36* 233.6 Hz
Tone 18 123.0 Hz Tone 37* 241.8 Hz
Tone 19 127.3 Hz Tone 38* 250.3 Hz

* - Not available on the Radio Shack FRS-106

The Radio Shack FRS-106 that a friend of mine has uses the following:

Tone 01 67.0 Hz Tone 21 131.8 Hz
Tone 02* 69.4 Hz Tone 22 136.5 Hz
Tone 03 71.9 Hz Tone 23 141.3 Hz
Tone 04 74.4 Hz Tone 24 146.2 Hz
Tone 05 77.0 Hz Tone 25 151.4 Hz
Tone 06 79.7 Hz Tone 26 156.7 Hz
Tone 07 82.5 Hz Tone 27* 159.8 Hz
Tone 08 85.4 Hz Tone 28 162.2 Hz
Tone 09 88.5 Hz Tone 29* 165.5 Hz
Tone 10 91.5 Hz Tone 30 167.9 Hz
Tone 11 94.8 Hz Tone 31* 171.3 Hz

Tone 12 97.4 Hz Tone 32 173.8 Hz
Tone 13 100.0 Hz Tone 33* 177.3 Hz
Tone 14 103.5 Hz Tone 34 179.9 Hz
Tone 15 107.2 Hz Tone 35* 183.5 Hz
Tone 16 110.9 Hz Tone 36 186.2 Hz
Tone 17 114.8 Hz Tone 37* 189.9 Hz
Tone 18 118.8 Hz Tone 38 192.8 Hz
Tone 19 123.0 Hz
Tone 20 127.3 Hz

* - Not available on the Midland 75-510

Does anyone know if there's a current standard for this?

Bob

What you say sounds reasonable-and I will oblige, as soon as I see posters from other countries using a 'disclaimer' line on ALL of their posts that say what country they are from. I am like most others-I enjoy seeing the laws for other country's and receiving input from foreign places-that is part of what the ART of Radio is all about.

What I cannot understand is why some people get so uppity because we do not use disclaimers. Is it your intention to say that the poster in these NG's is responsible for knowing the applicable laws for ALL countries that may read these posts? After all, if the person(s) monitoring these Newsgroups do not know what laws apply for their country then how in the name of Colombian Coffee am *I* supposed to know?

I will however modify my tag line to include something about how people outside the US should ignore my posts as they may not apply. However, a reciprocation by other users in other countries sure would be appreciated.

Also, nowhere in the description does it say U.S. for either of these newsgroups-but neither does it say it is specific to anywhere else either. That would seem to indicate to anyone with half a brain that different laws may apply.

BTW, I caught that Canadian users references to 'Yanks' and I know that is not exactly a term of endearment to your neighbors south of the Border.

Here is hoping we all have a GREAT '98

*********All users outside the US please ignore this post as it may not apply to you******

I'm about to go and purchase that antenna, but I have one question. In the '98 main catalog they said it was 100'', but in the sale paper I got in the mail today, they said it was only 6' . I would like to know the true height of this antenna.
Thanks
-Chris

for.
> eight at bottom for VHF.dosen't
>that leave only the short horiznal elements for UHF? isn't that cross
>polarizeation, can that be efficent?

The Discone is a verticle antenna that will cover a full octave from
whatever frequency it's lowest frequency. Which depends on the
dimensions of the "disc" and the "cone".
>With all the consern written lately about the pros and cons of what specs

The radiation angle of a discone is VERY high, that makes it GREAT
for aviation and weather sat reception. But if you put up a coat-Hanger
ground plane for VHF and compare, the discone sucks for
land mobile reception.
>the coax should or shouldn't
>have, wouldn't it be of most importance to be in the correct polarity of
>reception, that freqs. recieved,
>(UHF)are transmitted on ?
The coax has noting to do with the polarity. It's loss is the only thing
you should care about.

You can cross post to both groups simultaneously, if you want.

There's been talk of justing letting alt.radio.scanner die but it keeps limping along, mainly fueled by posts from people who aren't aware of this group or people who cross post to both groups.

Any suggestions for removing the other group? This is one of those, "since you identified the problem, you should fix it kind of things."

I too was curious about this, so I did a little research.
Although RS scanners are actually Unidens, there are some differences.

Short answer: The 895XLT has a few more useful bells and whistles and
more importantly;
it specs out a tad better in the S/n area and selectivity.
This is most interesting when one considers <why?>

Finally; the 895 can be purchased for less..RS will not dicker on the
price.

3214. TRUNKER for Windows, any interest?

Newsgroup: rec.radio.scanner
Date: 1997-12-30 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <34c97a0e.866035563@nntp.atlanta.com>
Source record: 175622
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.misc

OK, I have a question for you scanner-heads out there. Would people be interested in a program similar to TRUNKER that runs under Windows?

Here's the issue: TRUNKER works by putting the PC timer into it's highest resolution counting mode. The data from the slicer causes a serial interrupt. In the interrupt routine, the timer is read. Based on interrupt frequency, etc, a bit clock is derived to demodulate the data.

In Windows, a user application cannot be guaranteed the amount of time from when an interrupt occurs to when an interrupt is serviced. If the OS is in ring 0 (in the case of NT), it might be a number of milliseconds before the interrupt gets handled. Obviously, if the serial interrupt routine reads the timer, the timer will have elapsed some additional amount of time that cannot be determined. Thus, it ain't gonna work.

How to solve this: MicroChip (the PIC people), make a little 8 pin processor (the PIC12C508). It would cost virtually nothing to take one of these parts and in conjunction with the existing data slicer designs, build a little widgie that measures the amount of time between data transitions, and send this serially to the PC.

This would allow just about any machine that can handle a 115200 baud serial data stream to run software capable of decoding the control channel (to get 115200 baud, we know that the Motorola SmartNet control channel runs at 3600 baud. Since we need to send 2 8 bit words to represent the bit state and the number of microseconds since the last change, we get 3600 * 8 * 2 = 57600. We also know that a serial character has a start and stop bit, so the actual bit rate is 3600 * 10 * 2 = 72000 baud. And we most likely want to use the next high *standard* rate, thus, 115200)

But, you may say, most PCs can't handle 115200, sustained. My experience says this is usually a result of poor serial drivers, although on an IBM XT, it's a true statement. And, we're not getting a sustained 115200 rate, we're getting 7200 character per second, with characters being sent at 115200.

If the Windows applicate is written properly, it would also be COM port independent, i.e. it could run on COM1 thru COM10 (assuming you have a RocketPort, or other multi-port serial card).

I'd be interested in designing the adapeter, if someone want
to take a shot at porting or writing a TRUNKER equivalent for Windows
(in Visual Basic, preferrably, Visual C++ as second choice).

I usually do not jump in thoses "blastS"but about the use of Yankees
here in canada we use-it only for BASEBALL,we are so near then there is
no difference between an english Canadian and an american,if you look on
Canadian grocery stores you will see how americain products we buy so
please do not try to put gaz on fire.For my part,my english is not good
but at least I still try.About Stern the only reference negative about
him was when he say
He hate french canadians because in WWW french have help germans killing
Jews(I keep my own point of view about Jews for myself because If I tell
how I feel about them.....)So,Canadian and americans live on the
same spot NORTH AMERICA and be good nabors seem to be the best approch
but you can stay home there is never better place then HOME.

If it is already scrambled, why do you want to encrypt it again?

If you'd like to decrypt it, then it depends on the encrypting
technology. Insufficient data for an answer.

10 Codes can vary by agency. There is a standard set of codes by APCO,
but agencies are not "required" to use them and they normally modify
them to meet thier own needs.

No way, you're in luck if they are the same in the county, here in
columbus, city PD and county Sheriff are different, much less anything
else. If you were being sarcastic, this is for the newbies :)

3224. Help --> BC100XLT global disengage lockout?

Newsgroup: rec.radio.scanner
Date: 1997-12-30 00:00:00 UTC
From: MacUser@Penn.com
Message-ID: <MacUser-ya023580003012972128570001@news.icubed.com>
Source record: 175682
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Is there a keyboard command sequence that will automatically disengage the lockout command on a Bearcat 100XLT handheld scanner?

I've observed that the lockout is engaged on all channels, all 100 of them, if the battery is removed. No idea why that would be the case. No other programming is lost or changed, to my knowledge.

If I remove the battery and then replace it, the scanner does not come on the first time I flip the switch. The second time it comes on, but as I say, all channels have the lockout function engaged.

Any clues out there for this mystery?

- Dave

Greg:

You don't really have to worry much about trunking, and CTCSS for aero scanning.

Go to your local Radio Shack store, they have a book specifically dedicated to aeronautical type scanning!

Bill Crocker

p.s. I'll email you a list of aero frequencies for starters in a separate email.

Adam,

Before you give up, try changing the value of R2 from 10k to either 1k or 2.2k . We have built several of these circuits and find they like that value much better. Also, be sure you are tapping the discriminator circuit or demod output of your receiver. This circuit also likes a lot of audio in order to work properly.

Zack Miller wrote:

> Anyone know what chip is the discriminator and what pin is audio from
> the discriminator ?
>
> Zack

From my information file:

Discriminator (baseband audio output):

Look for IC3, a small 16 pin surface mount IC that is a MC3371. The
baseband
audio output is pin 9. The MC3371 IC is over on the right and about
midway
between the front and the rear. The crude diagram below shows the
approximate
location of this chip at the 'X'.

```
--------------REAR---------------
| |
| |---| |-------| |
| | | | | | |
| | | X| | |
| | | | | |
| |---| |-------| |
| |
| |
--------------FRONT--------------
```

Pin 9 (or any pin for that matter) is real hard to get to with a
soldering iron.
Proceed at your own risk!

I soldered a small 1/8W 10K resistor to this pin and added a .01 uF
capacitor
in series to it. From there I run a small piece of shielded cable
outside and
I grounded the cable's shield at the screw near the AUX jack. The
shielded
cable is terminated with a female RCA jack. I did this rather than drill
a
hole for a panel mount RCA jack.

I copied the hookup information from the numerous POCSAG decoder circuits
on the
internet but I kept the 10k resistor and .01uF inside the radio rather

than risk
dangling this IC's connection outside the radio. I was able to
successfully
hook up the baseband audio output to an op-amp circuit and feed a POCSAG
decoder program.

Interesting note: This scanner has two areas on the PCB that are
enclosed.
One of them is accessible, the other has its access screws glued over
with
some epoxy to 'deter' you from getting inside. Also to the side of that
enclosure is some more epoxy that looks like it's covering some parts up.

I'm guessing this may be related to the cellular band lockout but I could
be
wrong. Besides what's to stop someone from using an up converter anyway
?

- snip -

Here is an other mod, ...

The VX-1R Software and Hardware mods (Version 1.00, Date: 14.11.97)
==========

Some time ago some mods for the VX-1R from YAESU were released on the
Net (Solder Jumpers 0 and 1).

In the US they are working (because by accident you switch to the
FreeBand Country Code 000 (US is 011), ARS is disabled) but in Germany
(Country Code 101) with soldering Jumper 0 (1 already soldered) you
Switch to Country Code 100 and get something totally different :)

You don't understand ?, keep reading :)

In the following Text the meaning of the 6 Jumpers is explained and
I present the Software mods for the VX1R. This is very simple, fast
and easy done, you just have to change 1 (one) byte in your .TPL file,
you don't even have to open the VX1R but you need the VX-1R Programmer
from the ADMS 1D Software Package.

After I have released the Software mods for the FT50R, there was a lot
of confusion, there were to many terms like Key_Byte, Band-Set_Byte,
Sub_Band-Set_Byte, ... to many addresses , ...

This time I will not go into details, and will try to keep it as simple
as possible, ONE Address and a Band_Set-Byte only.

The Band-Set_Byte is identical to the 6 Jumpers on the VX-1R:☐

Jumper 0 = Country CODE 1st bit ----------------------+
Jumper 1 = Country CODE 2nd bit -------------------+ I
Jumper 2 = Country CODE 3rd bit -----------------+ I I
Jumper 3 = WIDE TX ---------------------------+ I I I
Jumper 4 = CELLULAR -------------------------+ I I I I
Jumper 5 = WIDE RX ----------------------+ I I I I I
I I I I I I
Band-Set_Byte (8 bits) = 1 1 X X X X X X
I I
Reserved

Country
Code
2 1 0 VHF TX UHF TX VHF Auto rep. Shift UHF Auto rep. Shift
---
0 0 0 Free* Free* none none
0 0 1 144-146 430-440 145.600-145.800 -0.6 433.000-433.375 +1.6
0 1 0 144-148 430-450 146.605-147.000 -0.6 438.025-438.725 -5.0
147.005-147.395 +0.6 439.275-439.975 -5.0
0 1 1 144-148 430-450 145.100-145.495 -0.6 440.025-444.975 +5.0
146.000-146.395 +0.6 445.025-449.975 -5.0
146.600-146.995 -0.6
147.000-147.395 +0.6
147.600-147.995 -0.6
1 0 0 144-146 430-440 none none
1 0 1 144-146 430-440 145.600-145.800 -0.6 438.200-439.425 -7.6
1 1 0 144-146 432-438 145.600-145.800 -0.6 433.000-433.375 +1.6
1 1 1 144-146 430-440 none 439.000-440.000 -5.0

*Free (TX: 108-222 and 300-560)
BC Band - No TX
FM - No TX
AIR - Full TX
V-HAM - Full TX
VHF-TV - Full TX
ACT 1 - 300-420
U-HAM - Full TX
UHF-TV - 470-560 (approximate 562-565)
ACT 2 - No TX

WIDE TX (enable 1, disable 0)

Enable/disable WIDE TX from 140-170 and 420-470 (MARS/CAP)

CELLULAR (enable 1, disable 0)

Enable/disable the range 824-849 and 864-894

WIDE RX (enable 1, disable 0 = see below)

BC Band - Enabled
FM - Enabled
AIR - Enabled
V-HAM - RX Enabled only in TX range according the country code.
VHF-TV - Enabled
ACT 1 - Disabled
U-HAM - RX Enabled only in TX range according the country code.
UHF-TV - Enabled
ACT 2 - Disabled

You can make the mods by Hardware (solder the Jumpers) and call the
INIT routine (hold down AR and M/V at powering on, and press FW)
or by Software, you need the VX-1R Programmer and you have to change
only 1 byte (a 10 seconds job) in the .TPL file, no Init is required.

The results with the Hardware and/or Software mods are 100% identical and 100% reversible. The only difference is that with the Software mod you will switch back to your Hardware Configuration by calling the INIT routine.

According to some messages in the past days, YAESU is removing the diodes from the VX-1R to disable the Hardware mods, so the Hardware mods may not work in the future Versions of the VX-1R, then the Software mods will be the only Solution.

If you are using Hardware mods, note: 1=JumperOpen, 0=JumperClosed

If you are using the Software mods, it is not importuned what Hardware configuration you have (read: mods you have done), you can simply switch to ANY configuration.

Example:
7 6 5 4 3 2 1 0 (Jumpers/Bits)
Bits 7 and 6 are reserved 1 1
Enable Wide RX 1
Enable Cellular 1
Enable Wide TX 1
German 1
Country 0
Code 1

Band-Set-Byte 1 1 1 1 1 1 0 1 = FD (HEX Number)

Well, make now a .TPL file and change with a HEX editor the Byte on address 114C to be FD, upload this .TPL to the VX1R, done.

So, I thing the mods are understandable now, with this method you can configure the VX1R exactly according your needs.

The most used mod will probably be to enable WIDE TX, so the Auto Repeater Shift is still working, the TX outside the WIDE TX (with the FreeBand Country Code 000) is anyway only in miliwatts in VHF (not useful) and a little bit better in the UHF range 340-420.

A wise solution may be, not to make any Hardware mods. You make the Software mod (Enable WIDE TX or FreeBand) and in a emergency you can switch to the unmodified (factory) configuration by the INIT routine in just 1 second (hold down AR and M/V at powering on, and press FW) You know, just in case ...

That's all folks, for now :) , there are some other interesting things, but I want to experiment a little more before I release them.

If you have any Questions, Email me.

73's to all.

PS. - Thanks to Mark Russo for his great Help, ...

- Greetings to all my Friends in Skopje, Mazedonia.
- CQ CQ CQ Z3HAN, still ill ?, you should eat Cheese from Berovo :)

>thank you in advance

There are a couple of good (and free) ways of obtaining business
frequencies on the web.

Try searching he Percon Corp. online frequency database at:
http://www.perconcorp.com/db_srch.htm

Another good site for obtaining frequencies is
http://www.wvsc.wvnet.edu:80/~fcc/
This site contains huge downloadable FCC databases that will keep you
busy for a while!

Hope this helps!

You will have to search the 225-400 mhz range (AM) for starters.
Also the 136-140 mhz range (AM) plus your normal VHF air approach/departure and
control tower freqs for your area.

>Dale Ireland 47.7N 122.7W

It would probably be best to ground it to the antenna ground that you are using. I'd also suggest a short piece of cable and a barrel connector to connect the radio to the antenna. This would allow you to quickly disconnect the radio for thunderstorms. I am surmising the pcr1000 is an in-computer adapter card.

Source record: 175735

I was fortunate enough to be given a Diamond Super Gainer SG7900 antenna and am wondering what bands it would be useful for monitoring. I neglected to ask if it had been modified, as it appears to have its middle coil added by home mod. The gentleman used it for 2m HAM but said I could receive 800 band and other bands. Antenna is about 5 feet tall with three coils. Any info would be appreciated.

To program a freq. into a channel: Press MANUAL, enter the channel number you want to program (1-100) and press PROG. PGM appears on the display showing that scanner is in programming mode. Use the keypad to enter a frequency and press ENTER to store the frequency.

You can also store a frequency found in a band search in the MONITOR MEMORY and later move that frequency to a memory channel: When the scanner stops on a transmission, press MONITOR. To continue the scan press the up or down arrow key. To move the frequency from monitor memory to a memory channel press MANUAL, the channel number you want to store the monitor frequency in and PROG. Then press MONITOR and ENTER. The monitor frequency will be stored in the selected memory channel.

Your 2026 can store up to 100 frequencies in permanent memory channels. There is also one MONITOR MEMORY which is temporary memory.

All,

Myself, I don't mind seeing traffic from Canada and other nations on these two newsgroups. I enjoy reading about what scannists in other nations have to say, their frequencies, their radios and so on since it give us a perspective on what they listen to and if we ever go outside the USA, we know what we can listen to. Give these Canadians and other International posters a break, we can learn from them as they can learn from us.

Yes there is, there is a hardware and software mod for expand TX/RX
including cellular,

but due to different firmware versions and software versions there are many
different ways

of doing this. Yeasu and RT systems keep updating their software and
radios to prevent

modifications from what I can see. I'm thinking of starting an
unofficial VX-1R page.....

I'll keep you posted. There are 3 Versions of the VX-1R, and 3 Software
versions.

The SG7900a is a mobile antenna for the 2m &
440 amateur bands. by your discription it dos'nt
sound like it's been modified since it comes from the factory with 3
coils on the mast.
It won't be resonant at 800Mhz, but it should do well from 144Mhz on
up.

Actually in theory you should not be able to hear horizontally
polarized signal on a vertically polarized antenna. The signal
strength is proportional to cosine of the angle seperating the
poloization. If that is exactly 90 degrees, the signal would be zero.
The reality is almost no vertical is precisely vertical, and no
horizontal element is precisely horizontal, but it is usually close
enough that 10-20db is the likely penalty. 20db implies that you
between 90 and 91 degees off which is very close.

As a foreigner I would like to ask a few questions on
"Rat Shack" in New Jersey (going there late january '98) :

- Does all the big Malls have a Radio Shack store?

- Are special offers only valid in certain stores, or
does the whole chain of stores have the same offers
at any given time ?

- Can one store offer same item (at same price) as any
other Radio Shack simply by back-ordering this from a
main-supply?

BTW: What is the biggest Radio Shack store in N.J., and
where is it situated? Do the bigger stores typically have
more offers/rebates and a wider number of products?

FYI: I want to buy a PRO-2042/2045 with an Opto. OS535 PC
interface. Anything I should be aware of ? And will these
items still be in stock this coming spring?

Regards,
Knut Otterbeck

MANY other pathetic lies & pompus sniveling deleted.

Bill, you would do well to follow the advice below:

> You're one sick, sorry, shameful dude, numbnuts. If I was you,
> and thank the Cosmos I'm not, I'd go see Jack Kavorkian. I reckon
> he's about the only one on this planet who can help your sorry ass.

3269. Re: Charlie's appeal: Please let it die

Wrong, Charlie. He said he thought the phone was analog. That means
it'd use voice-inversion, which is easy to monitor. Even if it was
digital, the adio would be coded (CODEC/VOCODER...) but probably not
encrypted.

John:

My friend and I both bought the ICOM PCR-1000, and we've been really happy with them! Contrary to some comments, I think the software is very well done. No program is going to be exactly what everybody wants, but that leaves room for improvement. The people who do ScanCat, have already claimed they will have a version of their software to support the PCR-1000, in spite of ICOM not releasing their programming command syntax. The unit is built like a tank, and even has a built in speaker. True, it's a small speaker, but works well. There are external jacks for just about anything you could dream up, including 9600 bps Packet!

An advantage of being external, is that it's easier to move to different systems, i.e.; home, or work, vacation, etc. You can use it with a laptop! It doesn't take up a valuable slot in your system. It doesn't burden your systems power supply, or generate additional heat!

Bill Crocker

Me to. The mod I need is to disable or quiet that damn *BEEP* as I use this radio in the bedroom. I knew when I got this radio that it was not a "great" radio, but it does scan fast.(great for searching new freqs.) I did change the back light bulb to a more pleasent green as the bright orange is kind of sickining.
Thanks in advance,
Charlie

Why should someone pay more for an item then what it is really worth?

Hail the Price Police - keep up the good work guys...

P.S. You must have been overpricing the items or you would have sold
them...right?

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the

transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation.

This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages

long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band |

You can often determine a transmitter's frequency band by | the size and type of antenna used. |

The Police Call Plus book contains sketches of antennas. | Antenna catalogs are crammed full with antenna pictures and | specifications and they are usually free. Contact Antenna | Specialists (216-349-8400), Cushcraft (603-627-7877), | Tessco (800-472-7373), Maxrad, Larsen Electronics (800- | 426-1656), and other companies in the land mobile equipment | business. |

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but you can save lots of money if you get a good deal on a used scanner. Hamfests are probably the best place to find used radios, but you must be familiar with the equipment. Hamfests are repleat with older radios you won't see in today's catalogs.

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. I purchase most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a

flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the

microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd

electrolytic capacitor in series between the external
speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder
connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier
activated relay inside the BC890XLT wore out. Andy found
the identical relay sold at Radio Shack (part #275-232) and
says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are
illuminated by "grain of wheat" type incandescent bulbs.
Gary Saffer reports that the bulbs and buttons are located
on a small printed circuit board which sits behind the
radio's face plate. Gary unsoldered the burned out bulbs
in his radio and replaced them with 12 volt Radio Shack
bulbs (#272-1092c). They should last a long time when
powered by the 8 VDC supplied by the BC760XLT. |

Open Resistor in BC140 |

Robert Casey fixed his deaf, 16 channel Bearcat BC140 |
scanner. A 10 ohm resistor had opened that fed a circuit |
that generates 22V for the varactor diode tuner circuits. |
Without the 22V, there was no tuning of the local |
oscillator and front end, and no reception. What he did |
was compare voltages to a second working BC140.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and

feature priority scan and a separate trimmer capacitor for
each channel to net the crystals on frequency.

Band Frequency Limits

```
--------------------------
VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz
```

Table 4. Plectron SM Model Band Limits

```
Model UHF VHF-high VHF-low
---------------------------------
SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X
```

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1997 by Bob Parnass, AJ9S |

[NOTE: The first version of this article appeared in the
RCMA Newsletter, December 1988. It may not be reproduced
in whole or in part on CDROMS, in bulletin boards,
networks, or publications which charge for service without
permission of the author. It is posted twice monthly on
the USENET groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is
difficult to use because of too much hysteresis. The
American Heritage Dictionary of the English Language
defines hysteresis as the:

o "Failure of a property changed by an external agent
to return to its original value when the cause of the
change is removed."

It's like having play in a car's steering wheel, or
backlash in a gear set. Too much hysteresis in a squelch
circuit forces one to keep the squelch at a tighter
setting, missing weaker signals when scanning or searching.
The squelch hysteresis problem was first addressed in a
1984 article about the Radio Shack PRO-24 crystal
controlled scanner.

Why do engineers design these circuits with any hysteresis?
Basically, hysteresis prevents weak signals from "popping"
the squelch open and closed rapidly, which would be very
annoying to the listener. A squelch circuit with hysteresis
requires a stronger signal to open the squelch than it does
to keep it open.

Models cursed with too much hysteresis include the
Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003,
PRO-2004, and others. Don't despair, the fix is simple for
most radios. I've successfully reduced the squelch
hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197	47K try 220K.
Radio Shack PRO-2004	R148	47K remove R148 or replace with 220K.

	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated December 10, 1997

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

JANUARY 1998

Jan 11 (Sun), Waukesha, WI - 25th Annual Midwinter Swapfest. Waukesha County EXPO Center, Waukesha, WI. West Allis Radio Amateur Club (WARAC) 8:00 AM $3.00/$4.00. Amateur Exams. Ham Radio. Computer. Electronics. For Information Contact WARAC Swapfest, PO Box 1072, Milwaukee, WI, 53201 or Phil Gural, W9NAW, S67 W12944 Larkspur Rd., Muskego, WI 53150-3435. tel (414)425-3649.

Jan 25 (Sun) - Villa Park, IL - Wheaton Community Radio Amateurs Mid Winter Hamfest - '97 at the Odeum Exposition Center 1033 N. Villa Ave., Villa Park, IL. Admission $6. Doors open at 08:00 till 14:00 . Lucent employee ticket sales: Jack Feldman and John Broughton. Info: Donald Motz, N9NYX, PO Box QSL, Wheaton, IL 60189. tel. 630-665-7757. E-mail: donlin@xnet.com

FEBRUARY 1998

Feb 15 (Sun), Rock Island, IL - Davenport ARC. QCCA Expo Center, 2621-4th Ave., Rock Island. 7:30 AM - 3:30 PM. Talk in 146.88 and 146.64 MHz. info: Kent Williams, K9UQI, 4245 10th St., East Moline, IL 61244-4154. tel. 309-796-0718. Fax: 309-796-0629. E-mail: k9uqi@arcsupport.com. http://www.arcsupport.com/drac

MARCH 1998

Mar 8 (Sun) - Waukesha, WI. SEWFARS Swapfest. Info: Mary J. Adams, KB9IFF, tel. 414-358-1003. E-mail: mjadams@execpc.com.

March 15 (Sun): Sterling-Rock Falls ARS, Sterling, IL info: Lloyd Sherman, KB9APW, PO Box 521, Sterling, IL 61081-0521. tel. 815-336-2434, E-mail: lsherman@essexl.com

March 22 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. All indoors. Admission $5 at gate, free parking. Setup at 6 AM, doors open at 8 AM. Info: Dave Gudewicz, KB9KDA, 5 Brigantine Lane, Grayslake, IL 60030. tel. 847-223-1088. (Small fest, but usually interesting - AJ9S.)

APRIL 1998

April 5 (Sun): Madison, WI. Madison Area Repeater Association. Info: Jeremy Charles, N9VHT, PO Box 8890, Madison, WI 53708-8890. tel. 608-245-8890. http://www.cs.wisc.edu/~jeremyc/mara/swapfest/

MAY 1998

May 2 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.gicancomputershow.com

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners sold through | mid-1997 may be ordered through your local Radio Shack | store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC985XLT Trunktracker

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700

Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band.

Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good

internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on

vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for

each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion,

254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at www.grove.net for a review which includes quantitative test results.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered

different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate.

Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound

Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort

memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in

early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge both Radio Shack's optional, monolithic NiCd pack, and AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned

out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes

FR2525 10 X yes yes
FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner

crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

I have a BC100XLT with the following problems:

1) All channels locked out (can be unlocked, though)
2) No audio, no matter what position of squelch or volume knobs
3) No reception, even on WX channel

The unit scans, all keys work, and the battery is charged. I'm ready to send it to UNIDEN but if there is something I can do myself I'm ready to try.

Any and all responses, news or email are appreciated.

>Hundred Dollars, Both have spectrum display, Is the difference only
>Software or Hardware?
> THANKS , DON KA9QJG

It seems like there are two main differences:
o wider frequency range (0.15 MHz - 1.5 GHz comparing to 0.5 MHz - 1.3 GHz)
o on-board digital signal processor (DSP)

Check http://www.advdig.com/winradio/win3000i.cfm for more info.

Not sure if this is what you are looking for, but, CoolEdit96 is a shareware program with EXCELLENT PC SOundcard audio capture ability. Assuming that you want to connect a cable from the monitor out jack on your scanner to the line in jack on your sound card, this prgram will record and allow you to edit recorded sound. You can read more about it and download the software from http://www.syntrillium.com

Hope this helps,

D Comer

> than a Christmas Goose, Johnnie Mackey. I ignored the hell
> out of you for months while you played like a fan (sucked and
> blew), spewing venom and bullshit about me....continuously.
>
> And *I* wanted to make trouble? ha ha ha ha ha ha ha ha.....

NO, you continued to take little swipes when ever you could.
Want me to post the little bitching you did about me on
the scaning list server a few weeks ago?

Again, you can't come up with anything solid to defend yourself
so you become sarcastic.

> I see your hemorrhoids are bothering you again, you poor,
> pathetic, nescient, nincompoop.

For a third time, you can't come up with anything solid to
defend yourself so you become sarcastic and lie.

> Ha ha ha ha ha ha ha ha ha..... hee hee hee hee.....
>
> <rolling around in paroxysms of uncontrollable laughter>
>
> Ha ha ha ha ha ha...har har hardee har.....
>
> Ha ha ha ha ha ha ha ha ha..... hee hee hee hee.....
> <rolling around in more paroxysms of uncontrollable laughter>

The above is a good example of your pompus behavior. You can not
come up with anything real to attack me on or solid to defend
yourself, so you resort to the above.

> The differences betwixt thee and me, Johnnie Mackie, are as
> numerous as the grains of sand on the beach and the number
> of pimples on your face, which as I hear it from your PARG
> buddies, resembles that of a bastard rat.

More pompus talk. You have written to my PARG friends three
times, all over a year ago. They told you that they felt your

comments were un-warranted. In private they said far more but
I do not want to embarrass YOU.

> Ha ha ha ha ha ha ha ha ha..... hee hee hee hee.....
> <rolling around in more paroxysms of uncontrollable laughter>
>
> Good grief, Mackie-lad, go blow your snot-bubbling nose
> and get over it, will ya? Get down to the dentist and
> get yourself a good haircut for a change. And have 'im
> straighten out that 2-inch overbite and sew up that
> stinkin harelip. Geezus, man, you gotta stop taking out
> your pains on this forum.

Again, you can not find anything solid to attack me with
or to defend yourself so you resort to this childish
type of story making & pomous behavior.

> Ha ha ha ha ha ha ha ha ha..... hee hee hee hee.....
> <rolling around in more paroxysms of uncontrollable laughter>

See above comment.

> Ha ha ha ha ha ha ha ha ha..... hee hee hee hee.....
> <rolling around in more paroxysms of uncontrollable laughter>

See above comment.

> You are getting more and more funny by the minute, sonny.
> You got yourself some snot-bubbles blown up bigger than
> the world's record for bubble-gum bubbles, fer Pete's sake!

More childish garbage.

Why can't you act mature?

> Methinks I must have hit upon another sore spot,

On the contrary, you have NOT been thinking at all. Try it.

> And you? You are a syphilitic offspring from a mass
> Siberian gangbang on a helpless cockroach.....

Did you get this from a Don Rickles book?

OK DICK Kendrick, you wanted to know the articles I wrote. So I went & found two of them that will be REALLY EASY for you to find & understand.

Go to the "ARRL Letter" (www.arrl.org) for July 5, 1996 & see the article regarding the "Phantom Jammer".

Then go to "Hamradio Online" (www.hamradio-online.com) for June 1996 & read the article "Amateurs Locate Police Jammer in Oregon".

Read them & weep, SON!

Hello everyone,

The Trunked Radio Information homepage has now been operating for about 5 months, and has been a complete success.

Here you can find the latest information on the Trunktracker scanners, talkgroups, fleetmaps, frequencies, subfleets, Motorola Conversion information, control channel decoders and too much more to list.

See: http://web2.airmail.net/lblant1/trunked.htm

Still looking for lots of information for trunked systems around the US, so if you have some good information you would like to see posted, send it along.

Thanks!
-Lb

3324. Re: CTCSS tones for FRS Radios???

Newsgroup: rec.radio.scanner
Date: 1997-12-31 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <68ds0q$8mi@hopper.ACM.ORG>
Source record: 175529
Cross-posted to: rec.radio.scanner,rec.radio.cb

"Robert H. Eisner" <rheisner@worldnet.att.net> asked:
> .... what the standard CTCSS tones are for most FRS radios?

According to your listings, the Midland 75-510 uses the standard
ham CTCSS tone set. The Radio Shack FRS-106 appears to have deleted the
tones above 200 Hz and inserted seven new ones to make up the difference.
Since FRS radios are intended to be bought and used together by families
or groups, I'd suspect manufacturers don't care much about compatibility
across brands.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

CTCSS (PL) Frequencies

Freq Designator Freq Designator Freq Designator
(Hz) EIA Ham (Hz) EIA Ham (Hz) EIA Ham

67.0 L1 01 110.9 2Z 15 179.9 6B 29
71.9 L2 02 114.8 2A 16 186.2 7Z 30
74.4 WA 03 118.8 2B 17 192.8 7A 31
77.0 L3 04 123.0 3Z 18 203.5 M1 32
79.7 SP 05 127.3 3A 19 206.5 8Z
82.5 L4 06 131.8 3B 20 210.7 M2 33
85.4 YA 07 136.5 4Z 21 218.1 M3 34
88.5 L4A 08 141.3 4A 22 225.7 M4 35
91.5 ZZ 09 146.2 4B 23 229.1 9Z
94.8 L5 10 151.4 5Z 24 233.6 M5 36
97.4 ZB 11 156.7 5A 25 241.8 M6 37
100.0 1Z 12 162.2 5B 26 250.3 M7 38
103.5 1A 13 167.9 6Z 27 254.1 OZ
107.2 1B 14 173.8 6A 28

Motorola differs from EIA with: XZ (L1), XA (L2), XB (L3),
YZ (L4), YB (L4A), ZA (L5). ICOMM does not use 97.4 and uses one
less than the amateur numbers above that (i.e. ICOM #25 = 162.2).

I sudddenly have a display that reads "L6* error". Keypad is dead, but, I still get "White noise" when squelch is closed. Common problem ? Worth fixing after all these years of mostly trouble-free service (one repair in 1st year) OR, time to "pull the cord" & donate to the landfill ?

Thanks for information on the standard CTCSS tones used by
various Ham Radio Manufactureres.

I just think it's a little misleading for Radio Shack to
adverstise that they use the standard 38 CTCSS tones!

I'd be very interested in knowing what the Motorola FRS radios
use for CTCSS tones?

>
> - Chris, KD4DTS

Chris, this doesn't seem like the most sensible way to attack this problem. Why not just build a squaring loop and recover clock with it. (A squaring loop can be implemented with a few gates.) This can then strobe a status line on any available port (serial or parallel) to tell the program to grab the current output of the slicer on another status line as a valid bit. This way nothing needs to run faster than 3600 bps, and a large chunk of the Trunker code can be eliminated. In other words, if you're going to throw hardware at the problem, then use hardware to solve the real task directly rather than as a kludge to let a software emulation of that hardware work around Windoze limitations.

3336. QUESTION: What are the INPUT and OUTPUT freqs for the OLD LAPD TACs?

Newsgroup: rec.radio.scanner
Date: 1997-12-31 00:00:00 UTC
From: A@J.org
Message-ID: <MPG.f1429d13cc3d48d98a3f9@news>
Source record: 175541

I know that the "Old" LAPD TAC frequencies were in the 154MHz (VHF) range. But, does anyone know what the repeaters' input frequencies (i.e. the "Shift" or "Split") are?

Thanks,

Joe

3337. Re: encryption decoder

"Authorized User" <r.c.tidwell@worldnet.att.net> wrote:

> I am interested in knowing, does the technology exist to encrypt
>scrambled messages? If so how do I do it.

"Scrambling" and "Encryption" can be (and usually are) entirely
different processes. They can be used together or separately.
Scrambling is usually simple and provides "privacy" (tactical).
Encryption is usually much more complex and provides "security"
(strategic).

Scrambling is usually an analog process that "screws up" the way a
signal sounds, and the process of "descrambling" puts it back together
in by "unscrewing" it into a signal that kind-of sounds like the
original, only noisier and different tonality (your clarity may vary).

Encryption is a mathematical (usually digital) process, related to and
using codes, ciphers and algorithms. Scrambling can be easy to
decode, encryption is usally NOT easy to decode.

You have to know PRECISELY what form of privacy or security you are
dealing with before you can attack it (in order to define a decoder).
There is no "magic box" (like in the movie "Sneakers") that you can
buy that is a universal decoder for every form of message protection.

>the cause?
> Chris
> N9LLO

First... the Pro-2026 uses volatile memory that must be battery-backed or at least connected to a source of 12VDC power in order to keep the memory channels alive.

The older Pro-2026 scanners (with the captive DC power cable) had no battery back-up, and any sort of "dip" in the DC voltage or removal of power would result in instant memory erasure.

The newer ones (with the power jack on the rear panel) have a back-up power source that will keep the memories alive for two weeks or so without any power being applied. It is still possible to lose memory channels, it just isn't as instantly "guaranteed" as on the older units.

If this scanner is in a car, then you might be tapping your 12VDC power at a point that experiences severe voltage drop when you start the vehicle or turn on the headlights or both. This could cause the memory to dump.

Always power radio equipment from a separate fused DC power feed connected directly to the battery and not the wiring harness of the car. You could also use a diode and a BIG capacitor (25,000 uF and up) to provide an isolated "buffer" for your DC power line to allow spanning the dips in DC voltage you may be experiencing.

...or your particular scanner could also have a problem too.

John, WIN RADIO has many reps in the US. I am surprised you didn't know that. Maybe you should become a rep, it would be good to see all that experience and talent you brag about in action.

BTW, my Icom R7000 is starting to have a problem. When you turn it on everything works fine until you tune above 250 Mhz, then it goes silent. After it warms up all is fine. What do you suppose the problem is? Please be specific.

Source record: 175550

There was no standard split, so to speak. The inputs for VHF public-safety systems have always been assigned on sort of a catch-as-catch-can basis.

I'm not sure, but I don't think LAPD uses any repeaters on VHF-HIGH for voice anymore - Tac 1 / Tac 2 / Tac 3 are all simplex, The old dispatch freqs are used for MDT's, and probably still use the same old pairs (though I'd have to check to be certain).

Huh???? Shortwave is quite unlikely. I'll bet there's a microwave-based backup system or something of that nature - Brian can probably enlighten us...

The only indication I heard that anything unusual might be occuring was a repeated broadcast on the PD freqs for all station personnel to reset their %%%% boxes (I wish I'd taken note of what the boxes were called, at the time it didn't seem to be anything worth paying attention to)

Big Daddy (karldahlquist@vistagroupusa.com) wrote:

User access to the bandswitching signals would permit one to
perform a "virtual downconversion" modification. This
could potentially allow cellular phone reception.

Downconversion modifications using this technique
in older Uniden scanners are documented:

BC220XLT/BC230XLT - 1/95 RCMA Scanner Journal,
BC9000XLT - 6/96 Monitoring Times,
BCT7 - 5/97 Monitoring Times,
etc.

I don't have a BC235XLT schematic, so I'm guessing
which resistors you mean.

While I haven't written a program to decode radio data from a scanner, I have written a program which controls a scanner serially. You lost me on why the timing is a factor. In vb, a communications control (MSComm16.ocx or MSComm32.ocx) is used to send and receive data thru the serial ports. If you need to read data at a certain baud rate, say 3600, you simply set the Settings property to the proper baud and parity settings (i.e. 3600,1,7,2, which I think is the right setting for Motorola control channels). You then just watch the InBufferCount property to see if you have any data waiting.

The control takes over all the timing issues itself, at least for what I have used it for - programming and controlling the BC895xlt at 9600,n,8,1. One thing I do know, if you want to use VB for this, you will be stuck using the Comm control, which may not have the "umph" you need to get the job done. I searched thru the windows api for a better way and did not find it.

My next "mission" is an MDT decoder for windows, but I'm not sure if such a beast is possible, let alone feasible to produce. Time will tell.

Does anyone in the Phoenix or Los Angeles area carry such a beastie? I hate mail order, and so far the only source I have found for these things is Pervisell in England, which sucks big time because any check or money order payments to them have to be converted to British Pounds at my expense - which damn near doubles the price of the stupid thing! (Plus God only knows how long it would take for it to arrive!) I have tried to build it myself, but I am not too handy with a soldering iron, so all I have succeeded in making is a mess. It needs to be external, preferrably DB9 connector, but I can also use the DB25 connector version.

The Phoenix Area is preferred, but I do travel to Los Angeles frequently, so if you live in either place and know of a source, please post a reply here, detailing location and price. I don't care if it's homemade, commercial, pretty, ugly or what, as long as it works and doesn't cost a fortune.

Thanks,
-Phil

Why weep? Rejoice! Be happy! Enjoy a little humor
on this otherwise cranky, gnarly, surly forum.

After all.....you do have a *choice* as to how you
see things. So why cry?

This is a virtual place. It's a place where not only
can you be however you want to be, but you are also
free to *see* others however you want to see them.

No one can make you do anything you don't want to do,
including *weep*.

So don't cry unless you *want* to..... but if that
is the case, then bellow your heart out. Snivel! Blow
massive snot bubbles! Moan! Groan! Whine! But the
important thing is to enjoy your *freedom*. There are
those who would, if they could, deprive you of it.

Don't let them.

It is as simple as that.

You may have less choice out there in the harsh cold
world of reality.....but here in virtuality, you don't
have anything *but* choices and the freedom of choice.

Don't ever forget that.

This place is as American as it gets.

It won't ever get any better.

IMHO.

Could well be, but access to the bandswitching isn't
blocked in the slightest in other parts of the scanner.
So I doubt that was their reasoning.......

> which resistors you mean.

They're standard series feeders so that the outputs
can be pulled high or low by the CPU. I described them
about as well as it gets in terms of their connection points
to the CPU. There is really little to guess at other than
Uniden's purpose for wasting epoxy resin.

The *real* meat 'n taters of unexplained permanent low
and permanent high pins in that same vicinity of the CPU
wasn't touched or blocked at all. In other words, it's
conceivable that if one of those high pins was taken low,
the clouds would part; thunder would roar; lightning flash;
and a deep voice could bellow out saying....."Thank you for
liberating me from this dungeon...."

.....and the user thusly enjoy continuous coverage from
sub-DC to far beyond daylight.

Of course, the procedure could also unleash the demons
from hades and beyond to follow the poor unfortunate
sap throughout the rest of his natural born days, too.

One just never knows anymore........

That's a good point John. I bought my Pro-90 from US Radio
awhile back for $225 plus a few bucks shipping. That was when
the BC-235's were all going for $299. I figured I could buy
the extra battery and still be money ahead. Prices will
probably continue to drop and it will all be academic.

Happy New Year,

Jon

I purchase certain items at Radio Shack for a couple of reasons. They have a good return policy, coupled with the ability to purchase in Michigan, for example, and return
in Alabama. Also, many of their items are very high quality, such as many of their scanners and audio speakers. In addition, when these items are on sale, they are generally
a good value.

I DO agree that they seem to be staffing with arrogant, ignorant, and generally unpleasant
persons. I am not sure why this is the case, but here in Birmingham, it is becomming more
and more difficult to go into a store and NOT get into an argument with a salesperson (who is trying to sell a cell phone, etc, when you WANT a 2.00 connector).

Radio Shack also sends me a 10% off coupon each month, and on birthdays. I use them
on the sale items.

If you can stand the personnel (and..MANY are wonderful), I can see no reason NOT to
look at their stuff. Their amateur radio and scanner gear is top notch...

I DID read the post from the Canadian concerning Bearcat VS Radio Shack scanners.
In spite of him, I still like Canadians. Some persons have no clue...

I own 3 radio shack scanners, a pro-2006, a pro-90 trunk-tracker, and another portable
(model I forget)...All are excellent. The trunktracker is great.
super receiver, great selectivity, super fast scan. If you can find the Bearcat for less money, buy it. I just
took advantage of some sales and coupons....

Source record: 175637

I just got a Uniden 760xlt scanner. The guy that gave it to me did not give me an antenna. I rigged one up today using a right angle pressure fit b & c connector and a piece of rj59 coax. It seems to work ok! What do you think of this approach?? Would a b & c telescoping antenna work better. I am still trying to find one!

3383. WTB: Message Tracker Pro w/ FLEX option

Newsgroup: rec.radio.scanner
Date: 1997-12-31 00:00:00 UTC
From: Kent Gormat <kgormat@novagate.com>

OK.

Mr. Bill Cheek was attempting to be the US representative
for WinRadio. However, MANY people would REFUSE
to deal with any company that Mr. Cheek is involved in.

So, on this newsgroup Mr. Cheek created an alias identity
for himself as the WinRadio representative. That lasted a week
or two until he was discovered.

Regarding your lack of past experience with Mr. Cheek, maybe this
qoute could help you:

CBRambo wrote:
> I say that garbage like this is on here is why several people will never again
> purchase anything that is in any way associated with Bill Cheek.

Jon Hornstein wrote:

> I've read good and bad reviews about WinRadio. Although I can't say

All I can go by is your ACTIONS Bill, we have all learned
that you WORDS mean nothing. Your ACTIONS indicate here
that you want to make TROUBLE.

> Oh my, Johnnie Mackey, how original you are. But never
> mind that....

You obviously don't like to have your words used back at you.
Bill, you can only expect people to treat you the way you treat
them. Perhaps if you would change your approach with
others you would be more successful & less people would
dislike you. Think about it.

> C'mon, big bad Johnnie Mackey, belly up to the measuring stick.
> And bring your sweetie punkins, Petey Joe Boe and Glennifer Quarkstorm
> with you, what say?

That is the difference between you & I Bill. You like
to start trouble. You tell lies & make
up little stories & call people childish names like above. You can't
find any truth or fact to base your issues on, so you use your
own creation base.

How sad you are, Mr. Cheek.

You would be much better off with their enhanced discone, which probably would fit in your attic, than a 6 ft vertical antenna mounted diagonally or sideways... RS's new discone (with the low band whip) works great here. I can pick up the low power frequencies from the local airport, as well as the aircraft on the ground, where I cant even get the higher powered airport frequencies with the scanner inside the house or with a portable scanner standing on my roof.

======FIRESIDE CHAT ON THE TRUNKTRACKER SCANNERS=================

I'm not one to get all aroused and hot to trot over every little
breaking fad and fashion, and I do think "trunktracking" is something
of a fad right now.

I just don't see 800 MHz trunked systems lasting forever. The spectrum
isn't all that wide for one; the number of channels available to a
fleet isn't over-whelming; and the computer hardware and software
required to maintain a trunked system is extremely costly, both in
up-front costs as well as in long term maintenance. 800 MHz trunking is
just too fraught with problems and costs to be a long-lived entity.

Not only that, but if and when vendors like Motorola, GE, and Ericsson
ever change their software, what good are those high-falutin'
TrunkTrackers?

So, I'm not all that hot on TrunkTrackers, especially of Uniden origin,
and particularly the first versions to hit the market. I hear that
GRE-Japan has a trunktracking scanner in the works, so until there are
choices, I'll remain aloof and skeptical.

Analysis of the PRO-90 & BC-235XLT
==================================

I said I wasn't hot to trot over the TrunkTrackers, and I'm not.
However, as scanners, the PRO-90 and BC-235XLT are pretty hot stuff
when you get right down to it.

Referring to the Block Diagram I see where these scanners use five
BandPass Filters in the RF front end. Not bad, considering the PRO-43,
PRO-64, and PRO-2041 only have four. The PRO-2004/5/6 and the

PRO-2035/2042 have seven BandPass Filters, though. Let's compare them:

BANDPASS FILTERS
PRO-2004/5/6 PRO-90
PRO-2035/2042 BC-235XLT
============== =============
25 - 40 MHz 29 - 54 MHz
40 - 68 MHz 108 - 137 MHz
68 - 108 MHz 137 - 174 MHz
108 - 174 MHz 406 - 512 MHz
174 - 280 MHz 806 - 956 MHz
280 - 520 MHz
760 - 1300 MHz

Bandpass filters (BPF) are special front-end filter blocks composed of capacitors, coils, resistors, and diodes, the purpose of which is to admit a band of frequencies and reject all others.

As an example for the PRO-90 above, if the scanner is tuned to 50.000 MHz, then a strong signal on 109 MHz should not cause appreciable interference since the active BPF should reject anything below 29 MHz and above 54 MHz.

When a scanner changes frequencies, the CPU makes sure the correct BPF is switched in at all times. By the way, this switching sequence and checking is one of the limitations of speed in a scanner. Switching takes time! It also takes time for switching diodes to "settle".

But you get the idea for bandpass filters now. They are desirable, and the more, the better. Cheap scanners don't have any and instead use a different front end for each band of reception. Good scanners have four to seven BPF's.

AGC in the PRO-90 & BC-235XLT
============================

Virtually all scanners use Automatic Gain Control (AGC) somewhere in their circuits, but only the better scanners use AGC in their front ends. AGC in the front end helps reduce or eliminate strong signal overload, desense, and intermod caused by strong signals. The PRO-90 and BC-235 use AGC in their front ends, a decided strong point. Cheaper scanners use AGC only in the Intermediate Frequency (IF) sections of the receiver.

Double-Balanced Mixers in the PRO-90 & BC-235XLT?
==

The best scanners use "double balanced mixers" (DBM), at least for the 1st mixer, and ideally for the 2nd mixer as well. It doesn't appear that the PRO-90 and BC-235XLT go so far as to use DBM's at all, but not many scanners do. (The PRO-2004/5/6 and PRO-2035/2042 do!)

Computer Interfacability for the PRO-90 & BC-235XLT?
==========

I hear Uniden's base TrunkTracker, the BC-895XLT is computer interfaceable, but there's nothing evident of that nature for the PRO-90 and the BC-235XLT. Shame. Of all the scanners that need a computer connection, one would think the TrunkTrackers would. Of course, to date, only the PRO-64, PRO-2041, and BC-895XLT are computer connectable by factory design (speaking of the mainstream scanners, that is.)

Still, there is an interesting aspect of the PRO-90 and the BC-235XLT that could be exploited by an industrious third party for computer connection. The Block Diagram and schematic diagrams indicate the use of a discrete (external) uPD7225 LCD Display Driver chip!

Well, this chip is one of the claims to fame of the PRO-2004, PRO-2005, and the PRO-2006 and why the CE-232 Scanner/Computer Interface is such hot stuff. 99.9% of all scanners have the LCD Display driver on-board (inside) the CPU where it and its data *cannot* be accessed. An external location of the uPD7225 chip means *access* to the data that flows from CPU to the LCD Display. The following six display signals are thus available for sampling and use in an interface:

RESET C / D SERIAL DATA
CHIP SELECT BUSY SERIAL CLOCK

Not that the *availability* of these signals means anything, because the BC-2500XLT also used the uPD7225 Display Driver chip, and nothing ever came of it. But I do have to submit that the uPD7225 made life easy for the CE-232 Interface and its awesome Data Acquisition mode for the PRO-2004/5/6 scanner series.
.
I don't mean to imply that the CE-232 Interface can work in 2-way mode with the Trunk-Tracker scanners, (see ahead), but it is certainly possible for someone to decode the data on the above six signal lines and then use it with an interface similar to the CE-232. No one did it for the BC-2500XLT, and I'd guess they're not likely to for the PRO-90 and BC-235XLT either. But I mention it in case you know someone who has a proclivity for that sort of thing.

Short of a logic analyzer, it's pretty hard to read and decode the kind of data that flows from a scanner's CPU to the Display. It can, however, be done with a device (serial data interceptor/decoder) we published in the World Scanner Report a few years ago in V1N10 and V2N1 (back issues always available). Once the display data code is known, it's possible to design an interface to read, process and display that data on a PC.

At first glance, it appears more than feasible that the CE-232 Interface can be made to work on the BC-235XLT and PRO-90 for AutoProgramming and Remote Keyboard Control. (1-way mode)

If someone, (preferably a CE-232 owner), will lend me their PRO-90 or BC-235XLT, I'll be glad to make this determination and publish the results. Contact me by e-mail if you're willing.

What The Hell Is That Epoxy Blob?
==========

The Service manual has a notation on the Logic/CPU board, "Epoxy Blob". I haven't seen this blob with my own eyes, but the service manual indicates there is a wad of epoxy covering the row of resistors including R208, R209, R210, R211, R212, R213, and R223.

Say what? Why the hell would a group of resistors be covered with epoxy? A quick look at the schematic diagram reveals that these seven are switched pull-up/down resistors for the CPU functions of VHF-Lo, VHF-Hi, Aero, UHF, 800 MHz, VCO, and LE.

Oddly, this general area of the CPU used to be where we did cellular modifications prior to 1994, but I don't see a connection with those seven functions and any possible cellular hacks.

Strangely, there is a permanent pull-up resistor, R214, that is not epoxied, but which goes to *unnamed functions* at Pins 62, 64, and 72 of the CPU.

In a word, that blob of epoxy appears to be hiding something, but it's in the wrong place! This is definitely a mystery to be explored by the curious. Even though the resistors are covered with epoxy, the pins of the CPU are exposed, as are the traces, so the epoxy really accomplishes nothing to deter the determined hacker.

Mysteries in the PRO-90 & BC-235XLT
==========

Why the epoxy blob over the seven innocuous resistors? What is Uniden hiding here? Is it a decoy?

For whatever it is worth, R214 permanently pulls high CPU pins 62, 64, and 72. What would happen if one or more of these pins were pulled low?

Likewise, CPU pins 51, 52, 57, 59, and 65 are tied low to ground. Of these, only Pins 57 and 65 are labeled "GND". So what would happen if one or more of Pins 51, 52, and 59 were pulled high?

CONCLUSION
==========

TrunkTracker or not, and Uniden or not, the PRO-90 and BC-235XLT appear to be darned decent scanners from a technological point of view. One wonders about computer connectability and about the mysteries associated with the blob of epoxy, as well as the undefined high and low connections to unlabeled CPU functions.

What on earth does this have to do with "purchasing" anything?

And why do you ignorantly think it fazes me in the slightest?
I asked Mackey and now I'll ask you: are you stupid or just
ignorant? You sure give cause to wonder.

Don't think for a minute...not even a second...that you or
anyone else can hold "purchasing" over my head. I am immune
to intimidation of any sort.

Don't waste your fingertips, CB Milquetoast. They're too fragile.

Pack sand.

Outside of the Northeast Corridor, Amtrak operates on host railroads
and uses their road frequencies. The following list of railroads, AAR
channel numbers and frequencies for the California Zephyr was compiled
by Bill Vandervoort in Aug 96. The complete Amtrak files are available
in the CompuServe TrainNet Forum library. Note that the merger of the UP
and SP may have resulted in some frequency changes (besides screwing up
half the country's freight transport).
For a detailed survey of all US RR radio useage, buy a copy of the
"Compendium of American Railroad Radio Frequencies" by Gary Sturm and
Mark Landgraf

My words mean nothing? ha ha ha ha ha ha..... You should
go to Hollywood, Johnnie Mackey. You are a very funny fellow.

Trouble? ha ha ha ha ha ha ha..... you are fuller of shit
than a Christmas Goose, Johnnie Mackey. I ignored the hell
out of you for months while you played like a fan (sucked and
blew), spewing venom and bullshit about me....continuously.

And *I* wanted to make trouble? ha ha ha ha ha ha ha ha.....

I see your hemorrhoids are bothering you again, you poor,
pathetic, nescient, nincompoop.

> > Oh my, Johnnie Mackey, how original you are. But never
> > mind that....

Ha ha ha ha ha ha ha ha ha..... hee hee hee hee.....
<rolling around in more paroxysms of uncontrollable laughter>

The differences betwixt thee and me, Johnnie Mackie, are as
numerous as the grains of sand on the beach and the number
of pimples on your face, which as I hear it from your PARG
buddies, resembles that of a bastard rat.

> You like to start trouble.

Ha ha ha ha ha ha ha ha ha..... hee hee hee hee.....
<rolling around in more paroxysms of uncontrollable laughter>

Good grief, Mackie-lad, go blow your snot-bubbling nose
and get over it, will ya? Get down to the dentist and
get yourself a good haircut for a change. And have 'im
straighten out that 2-inch overbite and sew up that
stinkin harelip. Geezus, man, you gotta stop taking out
your pains on this forum.

You sprang from a bad gene pool, but that's your problem;
not mine. I can't help it if you were the world's first
and only living rectal birth. Rise to the occasion, son!
Play it up! Make some money off it. Exhibit yourself
in a better forum than this one.....one where people can
PAY to come laugh at you.

Ha ha ha ha ha ha ha ha ha..... hee hee hee hee.....
<rolling around in more paroxysms of uncontrollable laughter>

> You tell lies & make up little stories

Ha ha ha ha ha ha ha ha ha..... hee hee hee hee.....
<rolling around in more paroxysms of uncontrollable laughter>

You are getting more and more funny by the minute, sonny.
You got yourself some snot-bubbles blown up bigger than
the world's record for bubble-gum bubbles, fer Pete's sake!

> & call people childish names like above.

Those aren't *people*, you dumbshit. They're sniveling,
snot-bubble-blowing imbeciles like yourself.

> You can't find any truth or fact to base your issues on, so
> you use your own creation base.

Methinks I must have hit upon another sore spot, laddie.
Not only does your cavernous poopy still ache from that
Size #13EE I planted on you crosswise back in FidoNet, but
your jowls must be smarting from a backhand, too. Too bad
I had to bust that monstrous snot-bubble billowing off the
end of your schnoz. Look, Macksie-laddie, go back and take
care of that squaw and those bed-wetting kids. Or do they
laugh at you, too?

> How sad you are, Mr. Cheek.

Actually, son, I can't remember the last time I was sad.
Happiness is my middle name; glee and joy are my titles.
And mirth and frivolity are my degrees.

And you? You are a syphilitic offspring from a mass
Siberian gangbang on a helpless cockroach.........

Talk about sad?

Ha ha ha ha ha ha ha ha ha....... hee hee hee hee.....
<rolling around in more paroxysms of uncontrollable laughter>

You ignorant dumbass, you. Poor, poor, fellow.......

<sniggling>

<Whistling...."When Johnny Comes Home Again, harrah!">

It is a slow scanner, but I haven't heard any complaints about sensitivity, etc. It has compromises to give it wide range and, as I understand it, a bear to program. It is certainly worth $175.00 in the condition you describe. Generally, the asking is $250 -- $350, the selling toward the lower end of that. If you don't want it, buy it and sell it to me for $200.

(N.B. Some people hate these radios and will tell you to stay away from them, too many compromises. That is a matter of personal choice.)

That is strange, I own two 100xlt's and a 200xlt and have never
experienced this problem. I know after you reset the scanner (MANUAL + 2
+ 9) then turn the scanner on all 100 channels will be locked out, but
thats the only occourance I have seen.

Where in the heck is "Billy" coming from. He going to introduce a bill in Congress to outlaw "SCANNERS". That is, radio scanners, electronic equipment that receives a variety of radio signal messages via the air waves.

Does anyone know what prompted his thoughts on the subject?

I would think he would be more concerned about the illegal traffic stops on Louisiana I-10 by the Sheriff's Deputies. Where they stop you for a traffic violation and end up confiscating your vehicle and personnel belongings. Then, between the District Judge and Sheriff they split the take between them.

So I am told. What ever, that must take it's toll on the tourism industry. Who would want to visit that state and be ripped off.

I'm staying the hell out of Louisiana.....

Your source is wrong about the transmitter power, it's "only" 1200 kW.

Earlyer today I was told by Olav Mo Grimdalen, Frequency Maneger of
the Norwegian Post and Telecommunications that the above mentioned
1200 kW is the correct output.

Message-ID: <19971231001500.TAA14471@ladder01.news.aol.com>
Source record: 175699

the original question was how to decode pager tones but what was intended was two tone sequential decoding such as public safety voice dispatch paging. One way to do it is to find a used radio that has the ability to accomplish the decoding. Some basic Radius radios can do this. Hook the speaker output to a PA sustem and the real basic alert system is up and running.

>
>- Does all the big Malls have a Radio Shack store?
>

Not all malls, but a lot of them do. Most towns of any decent size have a Radio Shack. Sometimes they're in malls, sometimes they're not. When you get to where you're going, get a copy of the telephone directory and look up Radio Shack. In the "yellow pages" they'll probably be listed under "elecronics-retail" or something similar. If there's one near you, they'll be in the phone book. Or better yet, if you're staying at a hotel, just ask the front desk. They probably know where the closest one is. Everyone has to shop at Radio Shack at one time or another.

>- Are special offers only valid in certain stores, or
> does the whole chain of stores have the same offers
> at any given time ?
>

Both. Sometimes you can stumble on a really good deal on something that one store has that others don't, but for the most part everything they advertise at a certain price is for everywhere.

>- Can one store offer same item (at same price) as any
> other Radio Shack simply by back-ordering this from a
> main-supply?
>

Probably.

>BTW: What is the biggest Radio Shack store in N.J., and
>where is it situated? Do the bigger stores typically have
>more offers/rebates and a wider number of products?
>

The difference between a "large" Radio Shack and a small Radio Shack isn't that great. For something like a scanner, the size of the store probably won't have any bearing upon what they carry or have in stock.

>FYI: I want to buy a PRO-2042/2045 with an Opto. OS535 PC
>interface. Anything I should be aware of ? And will these
>items still be in stock this coming spring?
>
>

The clerk at the Radio Shack probably has no idea what an Opto OS535 PC interface is. There shouldn't be any problem finding the most expensive scanner Radio Shack makes in stock somewhere in New Jersey. Good Luck, and happy hunting.

Yes, I've been frustrated by the lack of applications for Windows along these lines. After your explanation, at least I understand why it's so much easier to write them for Messy-DOS. Still, it would be nice to get computer-controlled scanning into the 1990s before the turn of the century. :-)

When I first got my EMT certification and was thus qualified to work on ambulances for a living, I had the typical vollie attitude that money should not be a factor in emergency service. It took several years to outgrow that limited preconception and become aware of the real world of doing business.

For the original poster - if you're looking for new Rural/Metro freqs, try checking the FCC database for new or pending licenses under the names of companies that they have bought out.

Well put.

The alt. and rec. in these groups does NOT mean they are the property
of the USA as some users in here would like.

Now, a bit of info about scanning in Australia. Down here, we can buy
pretty much the same models as in the US with brands such as AOR,
Alinco, Camnis, Uniden, Realistic, Welz, etc freely available. The
one big difference is we don't have the cellular frequencies blocked.
This is a good thing, because at the end of 1999, the analog cellular
network will close down and those frequencies will be auctioned off.

As far as cheap goes, I built the original MDT circuit with all new RS parts,
and it cost a total of $12. That includes $6 for the cable, and a few bucks
for the DB25 Hood.

If you used a bunch of scrap parts, it shouldn't cost more than a few dollars,
at most.

> > have what you need.

> Then why the need for mod's? <G>

Bingo!

Well, a body ought to check the field first and inventory
his fundamental NEEDS from an off-the-shelf scanner. And
by this, I do mean *needs*.

Now when it comes to "wants", I guess that's where mod's
enter the picture. You know. You can't get blood out of
a turnip. But if you get all the scanner you can afford,
packed with the majority of your needs, then there's a
decent chance some of your wants can materialize, at least
with a little work.

But one should not get a 512 MHz scanner when one "needs"
a 900 MHz jobber-doo. Know what I mean?

Happy New Year!

horse's ass! I told you in the first post I responded to
you. Don't your cognitive faculties work at all? Read the
damn thing again if you can quit licking those bedpans
long enough. I told you that you were temporarily off
my Shit List until we got something settled.

Geezus H. Kriste, man....try....please try to hold a train
of thought for at least a couple of posts.

Unless your mempory ain't any longer than your whatchamacallit.

> MANY other pathetic lies & pompus sniveling deleted.

>BC> You're one sick, sorry, shameful dude, numbnuts. If I was you,
>BC> and thank the Cosmos I'm not, I'd go see Jack Kavorkian. I reckon
>BC> he's about the only one on this planet who can help your sorry ass.

Oh my, Johnnie Mackey, how original you are. But never
mind that.... let's get back to your eyelids and
where they came from..... We're on the verge of determining
what's wrong with you and how to correct it, and I don't
want to let it go now.

That......or let's settle this idiotic AOL thing.

If.....you can hold the train of thought for another post
or two.

BTW...how's them bed-wetting kids of yours and the squaw doing?

<sniggling uncontrollably)

C'mon, big bad Johnnie Mackey, belly up to the measuring stick.
And bring your sweetie punkins, Petey Joe Boe and Glennifer Quarkstorm
with you, what say?

sarcastic answers than helpful ones.

I agree with your comments. In true newgroup etiquite let me elaborate:

I have been on the USENET groups for years but as of late and particularly in this group a lot of the posts are a waste of time and effort to read. I read this group looking for helpful scanning tips, experiences of others who have information to share and occasionally I will send a polite e-mail to a person who has asked a question that has been answered before. Let us all "take it up a knotch"l and grow in our knowledge and experiences together.

: Thanks to those who reply.

: DENNIS in GA

I suspect that a resistor can be changed in the squelch circut to change
this....articles have been written in the past about this(but I don't know
if the 150 has been discussed).

Why should someone pay more for an item then what it is really worth?

Hail the Price Police - keep up the good work guys...

P.S. You must have been overpricing the items or you would have sold
them...right?

Good point! But why waste so many posts on it?
If the price is too high, nobody will buy. Thats it! He don't sell his
radio and nobody gets hurt! Thats my 2 cents worth.

What are you talking about and what thread is being continued?

/Bill

3442. Trunker V3.4.2--Any support for Pro2006/OS456?

Newsgroup: rec.radio.scanner
Date: 1997-12-31 00:00:00 UTC

Cross-posted to: rec.radio.scanner,alt.radio.scanner

From the Trunker V3.4.2 file "trunker3_4.html" provided
in the Trnk342.zip distribution file:

>Trunker can now drive additional models of scanners in
>"two scanner trunk tracking mode."
>The model used is determined by the environment variable "TRACKSCAN".
>The following values of TRACKSCAN are supported:
>
> Model TRACKSCAN Baud Rate
> ----------- --------- ---------
> none NONE no output on serial port
> (default) (not set) 9600 AR8000 by default
> AOR AR8000 AR8000 9600
> AOR AR2700 AR2700 9600
> AOR AR3000 AR3000 4800
> AOR AR3000a AR3000A 9600
> Kenwood KENWOOD 4800
> Kenwood KENWOOD9600 9600

Has anyone been working on mods to this program to support
"two scanner trunk tracking mode" driving a Pro2006/OS456?
If so, how can I get hold of this code?

The memory capabilities are the main difference. I'm not 100% sure
but I believe the Scout 25 had the ability to store 250 freqs. and the
40 has the capability of 400. I don't remember if the hit counts per
freq. changed along with the upgrade. Also, there are different
versions of the Scout 40. The first, firmware version 3.0 can scan
10MHz thru 2.8GHz. Whereas version 3.1 is "limited" to 1.4GHz. The
benefit is it scans faster. You can verify the version by observing
the display while powering the unit up. Version 3.1 also has a newer
Reaction Tune interface. It provides an easier connection with
supporting receivers, particularly the AOR 8000.

Hope this helps.

Dan

For the curious people, i finaly got pass that fiberglass shit that uniden put on the botom of 5 screws on the right side sheilding cover, well, got it of and was very disapointed, all it appears to be is filtering and coils, well, i have not cheked it out much yet. Also the rig appears to have SRAM so It may be possible to add more memery.

Anyone with more info please mail me...

Zack
